Read the following passage and answer questions

It is essential to build sustainability criteria into the supply chain of any green fuel project in order to ensure that there is no adverse effect on the surrounding environment and social structures. The report produced by the investors expresses concern that many companies may not be fully aware of the potential pitfalls in the biofuel sector. Production of corn and soya beans has increased dramatically in the last few years as an eco-friendly alternative to fossil fuels but environmental and human rights campaigners are worried that this will lead to destruction of rain forests. Food prices could also go up as there is increased competition for crops as both foodstuff and sources of fuel. The UN has warned that biofuels could have dangerous side effects and said that steps need to be taken to make sure that land converted to grow biofuels does not damage the environment or cause civil unrest. There is already great concern about palm oil, which is used in many foods in addition to being an important biofuel, as rain forests are being cleared in some countries and people driven from their homes to create palm oil plantation. An analyst and author of the investors' report says that biofuels are not a cure for climate change but they can play their part as long as governments and companies manage the social and environmental impacts thoroughly.

81. According to the passage which statement is true?

A Society has sufficient awareness about the pros and cons of biofuel

B Biofuels do not have any negative side effects

Read the following passage and answer questions

Ryokan, the Zen teacher, was requested by his sister-in-law to come to her house and talk to her son.

"He does not work, squanders his father's money in wild parties and is neglecting the estate," she complained. "If he does not reform, we will be ruined."

Ryokan went to his brother's house and met his nephew who was genuinely pleased to see him. The two of them had spent many happy hours together before Ryokan had turned to Zen and entered the monastery.

The young man knew why his uncle had come and braced himself for the scolding he was sure he would receive. But Ryokan said not a word in rebuke, the whole day.

The next morning when it was time for him to go, he put on his garments and then said to his nephew: "Will you help me with the thongs of my sandals? My hands shake and I cannot do it."

His nephew helped him willingly.

"Thank you," said Ryokan. "A man becomes older and feebler day by day. You remember how strong and robust I used to be?"

"I do," said his nephew, thoughtfully. "I do indeed remember how you used to be."

It was the moment of truth for him. He suddenly realized that his mother and all those who had looked after him had become old and that it was now his turn to look after them and to take on the responsibilities of the household and the community.

He gave up his dissolute life forever.

Read the following passage and answer questions

Way back in 1960s, when my generation was in the teens, long before any economist wrote about globalisation, Marshal McLuhan wrote a bestseller - The Medium is the Message - and coined the term global village. The book is full of quotable quotes about modern media, advertising, communication, politics, technology and so on.

It was a couple of decades after McLuhan's book was published that the word 'globalisation' captured the imagination of most people as they began to travel more easily. Television, as McLuhan reminded us, had brought the world into our living room. "Everybody experiences far more than he understands. Yet it is experience, rather than understanding, that influences behaviour", he wrote. Television had brought experience closer home, without the required understanding of that experience.
