Verbal Ability

Instructions [1 - 4]

In each of the following sentences four words or phrases have been underlined. One underlined part in each sentence is not acceptable in standard English. Pick up that part and mark its number.

1. This book is too/(1) elementary; it can help/(2) neither/(3) you nor I/(4).

- A (1)
- B (2)
- C (3)
- D (4)

2. I will/(1) always/(2) remember you/(3) standing by/(4) me and offering me encouragement.

- A (1)
- B (2)
- C (3)
- D (4)

3. As soon as/(1) the sun had rose/(2) over/(3) the mountain, the valley became unberably/(4) hot and stifling.

- A (1)
- B (2)
- C (3)
- D (4)

4. We admired/(1) his many/(2) attempts bravely/(3) to enter/(4) the burning building.

- A (1)
- B (2)
- C (3)
- D (4)

Instructions [5 - 8]

Fill in the blanks with the most appropriate words.

5. The ties that bind us together in common aorrvily are so that they can disappear at any moment.

- A tentative
- B twisted
- C tenacious
- D tendril

6. It would be difficult for one so to be led to believe that all men are equal and that we must disregard race, colour and creed.

- A emotional
- B democratic
- C intolerant
- D obsolete

7. Automation threatens mankind with an increased number of hours.

- A meagre
- B complex
- C useless
- D idle

8. This island is a colony of British, but in most matters it is and receives no orders from the mother country.

- A submissive
- B distant
- C aloof
- D autonomous

Instructions [9 - 12]

Each Question below Consists of a Related Pair of Words, followed by four pair of words. Select the pair that best expresses the relationship similar to that expressed in the original pair.

9. Poor : Wealth ::

- A Calorific : Heat
- B Affluent : Health
- C Emaciated : Obesity

D Honest : Truth

10. Play : Acts ::

A Essay : Topics

B Novel : Chapters

C Game : Players

D Poem : Rhymes

11. Clock : time ::

A Watch : wrist

B Odometer : speed

C Radio : sound

D Yardstick : distance

12. Doctor : Disease ::

A Moron : Imbecility

B Paediatrician : Senility

C Broker : Stocks

D Psychiatrist : Maladjustment

Instructions [13 - 16]

In the following questions choose the alternative which best expresses the meaning of the given word.

13. Dubious

A doubtful

B clear

C hesitant

D cautious

14. Pinnacle

A pass

- B taunt
- C peak
- D foothill

15. Credible

- A worthy
- B believable
- C noticeable
- D careful

16. Despicable

- A undesirable
- B faithless
- C desperate
- D contemptible

Instructions [17 - 20]

Choose the word which is opposite in meaning to the given word.

17. Ravenous

- A sated
- B famished
- C starving
- D neglected

18. Undulating

- A ups
- B flat
- C steep
- D gradual

19. curtail

- A burden
- B lengthen

C encourage

D express

23. COVER

A The light was so bright that I had to cover my eyes.

B Did you see the cover of the college magazine this year ?

C We look cover from the rain in a bus shelter.

D People try to avoid tax by setting up a cover to donate money to charity.

24. MASTER

- A She could not master the courage to tell her friend about her loss.
- B She quickly mastered the art of interviewing people.
- C The terrorist was a master of disguise.
- D He is the master of his house.

Instructions [25 - 28]

Fill in the blanks with appropriate alternative.

25. Rahul asked me

- A why didn't you go to Meerut ?
- B why I didn't go to Meerut ?
- C why didn't I go to Meerut ?
- D why you didn't go to Meerut ?

26. During the summer months, there is

- A prolonged country shortage in many parts of power
- B prolonged parts of the country in many power shortage
- C many parts of the country in prolonged power shortage
- D prolonged power shortage in many parts of the country

27. If I were you I what happened.

- A will tell him
- B would you told him
- C would have been telling him
- D would be telling him

28. This is of such atrocious behaviour.

- A my first time of hearing
- B the first time that I have heard
- C the first time of my hearing
- D the first time of the hearing

Instructions [29 - 31]

In the following questions, a sentence is given in active voice. Find the correct passive voice version from the given alternatives.

29. Some one had looked the class-room.

- A The class-room is locked.
- B The class-room was being locked.
- C The class-room has been locked.
- D The class-room had been locked.

30. We justly rebuked him for acting so selfishly.

- A He has justly rebuked for selfishness.
- B He was justly rebuked by us for acting so selfishly.
- C He has been justly rebuked by us for acting so selfishly.
- D He has rebuked by us for acting so selfishly.

31. That remark has wounded my feelings.

- A My feelings have been wounded by that remark.
- B My feeling has been wounded by that remark.
- C My feeling was wounded by that remark.
- D My feelings mere wounded by that remark.

Instructions [32 - 35]

In the following sentences replace the underlined words with the appropriate expression from the given alternatives.

32. The number of his supporters is expected to decrease drastically this time.

- A fall off
- B go out
- C break down
- D fall about

33. Which of her paremts does she resemble?

- A look up to
- B take after

C look after

D take up

34. Nobody was at home when the fire started.

A took off

B came about

C kicked out

D broke out

35. He is always prominent in a crowd because of his height.

A stands out

B looks out

C stands up

D looks up

Instructions [36 - 40]

In the following passage there are blanks which have been numbered. For each blank, four words are suggested. Find out the most appropriate word to fill in the blank.

A36..... party spirit, when it rages in full violence, exerts itself in civil war and bloodshed; and when it is under its greatest37..... naturally breaks out in falsehood, detraction,38....., and a partial administration of justice. In a word, it fills a nation with bad temper and39....., and extinguishes all the seeds of good nature, compassion and40.....

A jubilant

B enthralling

C furious

D persevering

A restraint

B nadir

C zenith

D uncertainty

- A nobility
- B adulation
- C revolution
- D slander

- A splinter
- B harmony
- C mettle
- D rancour

- A humanity
- B humdrum
- C laxity
- D intolerance

Quantitative Ability

36. The sum $\frac{1}{2} + \frac{3}{4} + \frac{7}{8} + \dots + \frac{1023}{1024}$ lies between

- A 5 and 6
- B 6 and 7
- C 7 and 9
- D 9 and 10

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

37. The value of $\sqrt[3]{1.001001001} - \sqrt[3]{1.001001}$ is closest to

- A 0
- B 10^{-6}
- C 3.10^{-9}
- D $(3.3).10^{-10}$

38. The value of $\frac{(2^3-1)(3^3-1)\dots(100^3-1)}{(2^3+1)(3^3+1)\dots(100^3+1)}$ is closest to

- A $\frac{1}{2}$
- B $\frac{2}{3}$
- C $\frac{7}{10}$
- D $\frac{3}{4}$

39. If the square root of a number is between 6 and 7, then the cube root of the number will be between

- A 1 and 2
- B 2 and 3
- C 3 and 4
- D 4 and 5

40. Of the following four numbers, the largest is

- A 3^{210}
- B 7^{140}
- C 17^{105}
- D 31^{84}

41. The sum of 18 consecutive natural numbers is a perfect square. The smallest possible value of this sum is

- A 169
- B 225
- C 289
- D 365

42. The sum $\frac{1}{1+1^2+1^4} + \frac{2}{1+2^2+2^4} + \frac{3}{1+3^2+3^4} + \frac{3}{1+3^2+3^4} + \dots + \frac{99}{1+99^2+99^4}$ lies between

- A 0.46 and 0.47
- B 0.47 and 0.48
- C 0.48 and 0.49
- D 0.49 and 0.50

43. The number of different prime numbers $p > 2$ such that p divides $71^2 - 37^2 - 51$ is

- A 6
- B 5
- C 4
- D 3

44. If $x^2 - x - 1 = 0$, then the value of $x^3 - 2x + 1$ is

- A 0
- B $\frac{1+\sqrt{5}}{2}$
- C 2
- D not uniquely determined

45. The sum of the reciprocals of the positive divisors of 120 is

- A 2
- B 3
- C 4
- D 6

46. If $x\%$ of y is 1% of z , $y\%$ of z is 1% of x and $z\%$ of x is 1% of y , then the value of $xy + yz + zx$ is

- A 1
- B 2
- C 3
- D 4

47. Sum of digits of $(10^{4n^2+8} + 1)^2$, where n is a positive integer, is

- A 4
- B 5
- C $4n$
- D $4n^2$

48. If x and y are positive real numbers such that their sum is 1, the maximum value of $x^4y + xy^4$ is

- A $\frac{1}{16}$

- B $\frac{1}{12}$
- C $\frac{1}{8}$
- D $\frac{1}{6}$

49. The average of 15 different natural numbers is 13. The maximum value of the second largest of these numbers is

- A 52
- B 51
- C 46
- D 26

50. Let $a_1, a_2, \dots, a_{19}$ be the first 19 terms of an arithmetic progression where $a_1 + a_8 + a_{12} + a_{19} = 224$. The sum $a_1 + a_2 + a_3 + \dots + a_{19}$ is equal to

- A 896
- B 969
- C 1064
- D 1120

51. V is inversely proportional to the square root of m and m is inversely proportional to the square of t . The relationship between V and t is

- A $V \propto t^2$
- B $V \propto t$
- C $V \propto \frac{1}{t}$
- D $V \propto \sqrt{t}$

52. A circle is inscribed in an equilateral triangle and a square is inscribed in the circle. The ratio of the area of the triangle to the area of the square is

- A $\sqrt{3} : 1$
- B $\sqrt{3} : \sqrt{2}$
- C $3\sqrt{3} : 2$

D $3 : \sqrt{2}$

53. In the given figure there are three circles each of radius 1 cm touching each other and internally touching a larger circle. The radius of the larger circle is

- A 2
B $\frac{3+\sqrt{3}}{2}$
C $\frac{3+2\sqrt{3}}{3}$
D $\frac{3+3\sqrt{3}}{3}$

54. If a, b, c, d and e are real numbers such that $a + b < c + d$, $b + c < d + e$, $c + d < e + a$ and $d + e < a + b$, then

- A the largest number is a and the smallest is b
B the largest number is a and the smallest is c
C the largest number is e and the smallest is c
D the largest number is c and the smallest is b

55. Let $2^{x+y} = 10$, $2^{y+z} = 20$ and $2^{z+x} = 30$ where x, y and z are any three real numbers. The value of 2^x is

- A $\frac{3}{2}$
B $\sqrt{15}$
C $\frac{\sqrt{15}}{2}$
D 15

56. If x and y are positive numbers, the largest of the following is

- A $x + y$
B $\sqrt{3xy}$
C $\frac{x^2 + y^2}{x + y}$
D $\frac{x^4 + x^2 y^2 + y^4}{x^3 + y^3}$

57. A book has 213 problems from 12 years, of competitions. At first there were 25 problems per year, then 16 problems per year and finally 20 problems per year. The number of years when there were 25 problems was

- A 1
- B 2
- C 3
- D 4

58. The ratio of the maximum value and the minimum value of $\sin^6 x + \cos^6 x$ is
- A 4 : 1
 - B $4 : \sqrt{2}$
 - C 3 : 1
 - D $3 : \sqrt{2}$
59. Let $a = 111\dots 1$ (where the number of 1's is m) be an integer and $b = 100\dots 05$ (where the number 0's is $m - 1$), then $\sqrt{ab + 1} =$
- A 33 34, where number of 3's is $m - 1$
 - B 33 36, where number of 3's is $m - 1$
 - C 33 34, where number of 3's is m
 - D 33 36, where number of 3's is m
60. If $(\log_3 x)(\log_x 2x)(\log_{2x} y) = \log_x x^2$, then y equals
- A 4.5
 - B 9
 - C 18
 - D 27

SRCC GBO Previous Papers

with detailed video solutions and analysis

61. Parallel lines are drawn on a rectangular piece of paper, The paper is then cut along each of, the lines, forming n identical rectangular strips. If the strips have the same ratio of length to width as the original paper, this ratio is
- A $\sqrt{n} : 1$
 - B $n : 1$
 - C $n : 2$

D $n^2 : 1$

62. In the figure, ABCD is a rectangle and each circle has diameter 4 cm. The length BC is equal to

A $4(\sqrt{3} + 1)cm$

B $4(\sqrt{3} + 2)cm$

C $11.5cm$

D $12cm$

63. The sum of the length, breadth and depth of a cuboid is 19 cm and its diagonal is $5\sqrt{5}$ cm. Its surface area is

A $361 cm^2$

B $125 cm^2$

C $236 cm^2$

D $486 cm^2$

64. A right circular cylinder with its diameter equal to its height is inscribed in a right circular cone. The base radius and altitude of the cone are 5 cm and 12 cm respectively, and axes of cylinder and cone consider the diameter of the cylinder is

A $\frac{30}{11}$ cm

B $\frac{60}{11}$ cm

C $\frac{30}{17}$ cm

D $\frac{60}{17}$ cm

65. A shopkeeper buys goods at 25% off the list price. He desires to mark the goods so that he can give a discount of 20% on the marked price and still have a profit of 25% on the selling price. What percent of the list price, must be marked on the goods ?

A 130

B 125

C 120

D 100

66. A sector with acute central angle θ is cut from a circle of diameter 12 cm. The radius of the circle circumscribed about the sector is

A $3 \cos \frac{\theta}{2}$

B $3 \sec \frac{\theta}{2}$

C $3 \cos \theta$

D $3 \sec \theta$

67. On a river, B is between A and C and is equidistant from A and C. A boat goes from A to B and back in 5 hours 15 minutes and from A to C in 7 hours. How less will it take to go from C to A, if water flows from A to C.

A 3 hours

B $3\frac{1}{2}$ hours

C 4 hours

D $4\frac{1}{2}$ hours

Instructions [68 - 71]

Study the following table and answer the questions.

School	No. of. students scoring marks above 60%	Percentage of students scoring marks less than or equal to 60%
A	1160	60
B	1170	70
C	1170	50
D	1200	85
E	1600	60

68. In which school, the number of students is the largest ?

A A

B B

C D

D E

69. The Average number of students scoring marks less than or equal to 60% is

A 1268

B 2980

C 3248

D 4248

70. The number of students of school D is more than the number of students of schools A and E together, by about

- A 15%
- B 18%
- C 30%
- D 38%

71. The ratio of the number of students of school B and C scoring marks less than or equal to 60% to that of schools A and D combined scoring marks above 60%, is

- A 13 : 5
- B 5 : 13
- C 8 : 13
- D 13 : 8

Instructions [72 - 75]

Study the following graph which gives the production (in hundreds) of scooters and motorbikes in a factory over the years and answer the questions.

Production of Vehicles(Scooters and Motorbikes) By a factory (in hundreds)

72. The percent drop in the production of scooters from 2002 to 2003 is about

- A 28.6
- B 35.7
- C 38.5
- D 42.9

73. The production of motorbikes in 2003 was what percent of the production of scooters in the same year ?

- A 162.5
- B 144
- C 122.2
- D 61.5

74. In which year, the production of motorbikes was equal to the average production of motorbikes per year during the period 2000 to 2004 ?

- A 2000
- B 2001
- C 2003
- D 2005

75. The ratio of the number of scooter to that of motorbikes produced during the period 2000 to 2003 is

- A 49 : 44
- B 43 : 48
- C 44 : 49
- D 48 : 43

Reasoning and Logical Ability

Instructions [76 - 80]

In the questions given below, a situation has been explained in a few statements, followed by a conclusion. You have to say whether the conclusion: (Your answers should be in the light of the statements given.)

76. Statements:

1. Mr. 'A' was given a chargesheet by his boss
2. His son met with an accident the same day.

conclusion: Misfortune never comes alone.

- A Necessarily follows from the statements.
- B Is only a long drawn one.
- C Definitely does not follow from the statements.
- D Is doubtful as the data provided is inadequate.

77. Statements:

1. Magazine often have a Readers' 'Column.
 2. Some friends are going to publish a new magazine.
- Conclusion : It will have a Readers' Column.

- A Necessarily follows from the statements.
- B Is only a long drawn one.
- C Definitely does not follow from the statements.
- D Is doubtful as the data provided is inadequate.

78. Statements:

1. Some disabled devotees often reach places of worship situated among high mountains.
 2. Some Persons claim to have been helped by gods and saints when other efforts quite fruitless.
- Conclusion: Faith has great power.

- A Necessarily follows from the statements.
- B Is only a long drawn one.
- C Definitely does not follow from the statements.
- D Is doubtful as the data provided is inadequate.

79. Statements:

1. Marriages are made in Heaven.
 2. Some marriages end up in the divorce.
- conclusion: Divorces are fixed up in Heaven too.

- A Necessarily follows from the statements.
- B Is only a long drawn one.
- C Definitely does not follow from the statements.
- D Is doubtful as the data provided is inadequate.

80. Statements:

1. Most of the accidents occur due to negligence.
 2. A cobbler, sitting on the footpath and working was hit a bus.
- conclusion: The cobbler was negligent.

- A Necessarily follows from the statements.
- B Is only a long drawn one.
- C Definitely does not follow from the statements.

D Is doubtful as the data provided is inadequate.

Instructions [81 - 85]

Words in questions given below have a definite relationship. Your task is to find the choice with similar relationship.

81. Hair : Head

- A Hand : Arm
- B Teeth : Mouth
- C Footpath : Road
- D Tea-leaves : Mountain slopes

82. Fore : Hind

- A Face : Neck
- B North : South
- C Land : Sea
- D Sky : Space

83. Rogue : Rascal

- A Merderer : Cruelty
- B Polite : Harsh
- C Spendthrift : Extravagant
- D Notorious : Famous

84. Horse : cow

- A Milk : Icecream
- B Snow : Water
- C Pink : Blue
- D Mars : Moon

85. Watch : Time

- A Barometer : Pressure
- B Lactometer : Milk
- C Yard : Metre

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

Instructions [86 - 90]

Each of the questions given below consists of a question and two statements numbered I and II. You have to decide whether data provided in the statements are sufficient to answer the questions.

86. Who among P, Q and R is the shortest ?

- I. R is taller than P
- II. Q is taller than P.

- A if the data either in statement I or in statement II alone are sufficient to answer the question.
- B if the data in statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the question.
- C if the data even in both statements I and II together are not sufficient to answer the question.
- D if the data in both statements I and II together are necessary to answer the question.

87. A's and B's Salaries are in the proportion of 4 : 3 respectively. What is A's salary ?

- I. B's salary is 75% that of A's salary.
- II. B's salary is Rs. 4,500.

- A if the data either in statement I or in statement II alone are sufficient to answer the question.
- B if the data in statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the question.
- C if the data even in both statements I and II together are not sufficient to answer the question.
- D if the data in both statements I and II together are necessary to answer the question.

88. How many books are on the table ?

- I. The total weight of the books on the table is 130kg.
- II. The weight of the table is also 130 kg.

- A if the data either in statement I or in statement II alone are sufficient to answer the question.
- B if the data in statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the question.
- C if the data even in both statements I and II together are not sufficient to answer the question.
- D if the data in both statements I and II together are necessary to answer the question.

89. In a code 'lee pee tin' means 'Always Keep Smiling'. What is the code for 'Smiling'?

- I. 'tin lut lee' means 'Always Keep left'.
- II. 'dee pee' means 'Rose Smiling'.

- A if the data either in statement I or in statement II alone are sufficient to answer the question.
- B if the data in statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the question.
- C if the data even in both statements I and II together are not sufficient to answer the question.
- D if the data in both statements I and II together are necessary to answer the question.

90. What is X's present age in years ?

I. X was born in September.

II. Y was 22 years old during September, 1993.

- A if the data either in statement I or in statement II alone are sufficient to answer the question.
- B if the data in statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the question.
- C if the data even in both statements I and II together are not sufficient to answer the question.
- D if the data in both statements I and II together are necessary to answer the question.

Instructions [91 - 95]

In the questions given below, a statement is followed by if implications I and II An implication is an underlying hint or suggestion that is taken for granted. Give your answer as:

91. Statement:

A further confirmation by the Finance Minister that the prices of essential items would not be raised was welcome feature for the public.

implications :

I. He proposes to raise prices of luxury items.

II. Some people had doubted the Finance Minister's announcement regarding the stability of prices of essential items.

- A if only I is implicit:
- B if only II is implicit:
- C if neither I nor II is implicit:
- D if both I and II are implicit.

92. Statement :

Prayers are sometimes answered when there is no chance or hope.

implications:

I. Some times, we do get helped miraculously.

II. God shows favour only when we are in absolute despair:

- A if only I is implicit:
- B if only II is implicit:

C if neither I nor II is implicit:

D if both I and II are implicit.

93. Statement :

Virtually all bosses are problem bosses in one way or the other.

Implications:

I. No employee other than boss creates problems.

II. Boss and employees never have coordination.

A if only I is implicit:

B if only II is implicit:

C if neither I nor II is implicit:

D if both I and II are implicit.

94. Statement :

First defeat often becomes a key to victory for some players.

Implications:

I. After first defeat they come to know where they stand and what they have to achieve.

II. After first defeat, every player is bound to win.

A if only I is implicit:

B if only II is implicit:

C if neither I nor II is implicit:

D if both I and II are implicit.

95. Statement :

Road and other areas around hospitals are marked as silence zone.

Implications:

I. Hospitals do not have sound-proof doors.

II. Noisy vehicles disturb patients.

A if only I is implicit:

B if only II is implicit:

C if neither I nor II is implicit:

D if both I and II are implicit.

Instructions [96 - 100]

A word arrangement machine when given a particular input, rearranges it following a particular rule. The following is the illustration of the input and the steps of arrangement:

Input: You do things to help others in difficulty.

Step I : Do you others to help things difficulty in:

Step II : Do others you help to difficulty things in.

Step III: Do others help you difficulty to things in.

Step IV : Others do help difficulty you to in things.

And so on goes the machine. Study the logic and answer the questions that follow :

96. If step II of a given input be 'why are you not in contact with me', what is the seventh step of the input ?

- A Why in you with are not contact me
- B Why you in aRe with not tontact me
- C Why in you are with Contact not me
- D You why in with are nof contact me

97. If step VI of an input is 'Above is the message to you from me', what is step III of that input ?

- A Above from the message to you is me
- B Above the from message to is you me
- C Above the message from to you is me
- D The above from message you to is me

98. Given the following

Input : I am talking about your Delhi Patna Agra.

What step will be the following arrangement ?

About am I talking Delhi Agra Patna you.

- A VI
- B VII
- C VIII
- D V

99. If step VII of a given input be 'I am serious about the conversation to you', what would be the input ?

- A The I serious to am conversation you about
- B The I to serious conversation am you about
- C Serious am the I you to about conversation
- D Serious I the am to about you conversation

100. Given the following input, what would be step VIII of the input ?

Input : I am waiting for your reply in future

- A For am I waiting reply future in your
- B For am waiting reply I future in your

C Reply am your I future in waiting for

D Am reply your I future for waiting in

SRCC GBO CRASH COURSE

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

Instructions [101 - 105]

In the following questions the symbols $-$, $\div$, $+$, $=$ and $\times$ are used with the following meaning:

$P - Q$ means P is greater than Q

$P \div Q$ means P is greater than or equal to Q

$P + Q$ means P is equal to Q

$P = Q$ means P is smaller than or equal to Q

$P \times Q$ means P is smaller than Q

For each question you have to assume given statements to be true and then. decide which of the two given conclusions is/are definitely true Give answer:

101. Statements : $A = K$, $N \times A$, $M + N$, $R - M$

Conclusions : I. $K - N$ II. $N \times R$

A if only conclusion I is true:

B if only conclusion II is true:

C if either conclusion I nor II is true:

D if both are true.

102. Statement : $A - T$, $R \div A$, $D + R$, $S \times D$

Conclusions: I. $D + A$ II. $D - A$

A if only conclusion I is true:

B if only conclusion II is true:

C if either conclusion I nor II is true:

D if both are true.

103. Statement : $E + E$, $H \times F$, $O - E$, $H = G$

Conclusions: I. $O - H$ II. $G \times F$

A if only conclusion I is true:

B if only conclusion II is true:

C if either conclusion I nor II is true:

D if both are true.

SRCC GBO Previous Papers

with detailed video solutions and analysis

104. Statement : $R \times S, D - E, G \div S, E + G$

Conclusions : I. $R \times D$ II. $D - G$

- A if only conclusion I is true:
- B if only conclusion II is true:
- C if either conclusion I nor II is true:
- D if both are true.

105. Statement : $M = W, B + A, M + A, G - W$

Conclusions : I. $B + M$, II. $M - B$

- A if only conclusion I is true:
- B if only conclusion II is true:
- C if either conclusion I nor II is true:
- D if both are true.

Instructions [106 - 112]

Read the set of informations given below carefully and then answer the subsequent questions :

- I. There is a group of seven persons in a family, A, B, C, D, E, F and G. They all appeared in an I.Q. to test their intelligence.
- II. There are two married Couples in the family and three females in total.
- III. G, a female, is the most intelligent.
- IV. B, the father of E, is more intelligent than his son.
- V. C has one son and one daughter. She is more intelligent than her husband.
- VI. The father of B is more intelligent than B himself.
- VII. E, the grandson of F, is the least intelligent. F, the grandfather, is the second most intelligent in the family.
- VIII. The mother of B is less intelligent than B.
- IX. None among the married topped the I.Q. test.
- X. The grandfather of G has two sons, one of whom is D, who is more intelligent than his brother but less intelligent than his wife.
- XI. Nobody is a widow or a widower in the family.

106. Who among them is married couple ?

- A AF
- B AE
- C AC
- D AD

110. Who among the following is not of the same generation as others ?

- A D
- B B
- C C
- D A

111. Who is less intelligent than all but E ?

- A A
- B B
- C C
- D D

112. Who is B married to ?

- A A
- B D
- C C

D E

Instructions [113 - 115]

In each of the following letter series, some of the letters are missing which are given in that order as one of the alternatives below it. Choose the correct alternative.

113. a b c a - b c a a b - c a - b b c - a

- A a b b a
- B a b a c
- C b b a a
- D c c a a

114. a b c - d - b c - d - b - c d a

- A b a c d a
- B c d a b a
- C d a c d b
- D d a c a b

115. - b c - - b b - a a b c

- A a c a c
- B b a b c
- C a b a b
- D a a c c

General knowledge

116. To whom the title 'Kaiser-e-Hind' was given by the British Government which was surrendered by him during the Non-Cooperation Movement ?

- A Sardar Vallabhbhai Patel
- B Mohd. Ali Jinnah
- C Maulana Abdul Kalam Azad
- D Mohan Das Karamchand Gandhi

117. The last Mauryan emperor was

- A Bindusara
- B Brihadratha
- C Vishakhadatta
- D Vikramaditya

118. 'Lepchas' may be found in

- A Sikkim
- B Manipur
- C Tripura
- D Nagaland

126. Who among the following is the author of the book "India-pakistan Coming to Terms" ?

- A Anita Desai
- B Ashutosh Misra
- C Kiran Mazumdar
- D Dr. M.S. Swaminathan

127. Which of the following terms is used in more than one game/sport ?

- A Love
- B Cox
- C Google
- D Jockey

128. Which one of the following is the Capital of Colombia?

- A Colombo
- B Lima
- C Bogota
- D Quito

129. Which film walked away with five awards, including the best-feature film at the 57th National Film Award presentation ceremony on 22 October, 2010 ?

- A Pazhasri Raja
- B Paa
- C 3 Idiots
- D Zindagi Na Milegi Dobara.

130. What is Malathion ?

- A An Instrument
- B A Vitamin
- C An Insecticide
- D An Engyme

131. Who has received the "Global Vision Award"?

- A Jeffrey Immelt
- B Ratan Tata
- C Mukesh Ambani
- D John D. Rockefeller

132. In which year Public Dept Act was passed ?

- A 1940
- B 1944
- C 1948
- D 1950

133. Who among the following is the author of book "I Predict a Century of Hope Towards an Era of Harmony with Nature and Freedom from Hunger" ?

- A Amartya Sen
- B M.S. Swaminathan
- C A.P.J. Abdul Kalam
- D Manmohan Singh

134. With which country India has signed a Comprehensive Economic Cooperation Agreement?

- A Malaysia
- B Singapore
- C Bhutan
- D Bangladesh

135. Which organisation has launched 'Awaaz Do' with the support of Government of India ?

- A UNESCO
- B UNICEF
- C UN
- D WTO

136. Folkland Islands have been a disputed territory between

- A Mexico and USA
- B Argentina 'and Chile
- C Britain and testin
- D Britain and Chile

Explanations

Verbal Ability

Quantitative Ability

41. E

The series can be broken as: $\frac{1}{2} + \frac{3}{4} + \frac{7}{8} + \dots \dots \frac{1023}{1024}$ or $(1 - \frac{1}{2}) + (1 - \frac{1}{4}) + \dots \dots$

This becomes: $1+1+1+1\dots n$ times - $\{ \frac{1}{2} + \frac{1}{2^2} + \dots \dots \frac{1}{2^n} \}$

Here, $n = 10$

Hence, the sum becomes $10 - (\text{Sum of GP upto 10 terms with a common ratio of } 0.5)$

This gives the answer as: $10 - \frac{1}{2} \times \frac{1 - \frac{1}{2^{10}}}{1 - \frac{1}{2}}$ or approximately 9 (slightly greater than 9)

44. C

Since the square root of a number is between 6 and 7.

So, number itself will lie between $6^2 = 36$ and $7^2 = 49$

Cube root of 36 = 3.3 (Approx)

Cube root of 49 = 3.66 (Approx)

Hence, the cube root of the number will be between 3 and 4.

45. C

$$3^{210} = (3^2)^{105} = 9^{105} < 17^{105} \Rightarrow 3^{210} < 17^{105}$$

$$7^{140} = (7^4)^{35} = 2401^{35}$$

$$17^{105} = (17^3)^{35} = 4913^{35} \Rightarrow 7^{140} < 17^{105}$$

$$17^{105} = (17^5)^{21} = 1419857^{21}$$

$$31^{84} = (31^4)^{21} = 923521^{21} \Rightarrow 31^{84} < 17^{105}$$

Hence, largest of the number = 17^{105}

46. B

Let 18 consecutive natural number = $a, a + 1, a + 2, a + 3, \dots \dots, a + 17$.

$$\text{Sum} = \frac{n}{2} [2a + (n - 1)d]$$

$$= \frac{18}{2} [2a + (18 - 1)1]$$

$$= 9 (2a + 17)$$

$$= 18a + 153$$

$$\text{Put } a = 1, \text{ Sum} = 18 + 153 = 171$$

$$\text{Put } a = 2, \text{ Sum} = 36 + 153 = 189$$

$$\text{Put } a = 3, \text{ Sum} = 54 + 153 = 207$$

$$\text{Put } a = 4, \text{ Sum} = 72 + 153 = 225 \text{ [Required answer]}$$

47. D

$$\frac{1}{1+1^2+1^4} + \frac{2}{1+2^2+2^4} + \frac{3}{1+3^2+3^4} + \dots \dots + \frac{99}{1+99^2+99^4}$$

$$= \frac{1}{3} + \frac{2}{21} + \frac{3}{91} + \dots \dots +$$

$$= \frac{1}{1 \cdot 3} + \frac{2}{3 \cdot 7} + \frac{3}{7 \cdot 13} + \dots \dots +$$

$$\frac{1}{1 \cdot 3} \text{ this can be written as } \frac{1}{2} \left(\frac{1}{1} - \frac{1}{3} \right)$$

$\frac{2}{3 \cdot 7}$ this can be written as $\frac{1}{2} \left(\frac{1}{3} - \frac{1}{7} \right)$

$\frac{3}{7 \cdot 13}$ this can be written as $\frac{1}{2} \left(\frac{1}{7} - \frac{1}{13} \right)$

The whole expression can be written as

$$= \frac{1}{2} \left(\frac{1}{1} - \frac{1}{3} \right) + \frac{1}{2} \left(\frac{1}{3} - \frac{1}{7} \right) + \frac{1}{2} \left(\frac{1}{7} - \frac{1}{13} \right) + \dots$$

The terms get cancelled out and we will be remained with the first from the first term and the second from the last term.

The second term in each of these terms form a pattern.

$$(n+1)^2 - (n+1) + 1$$

For the first term $n=1$, $(n+1)^2 - (n+1) + 1 = 3$

For the second term $n=2$, $(n+1)^2 - (n+1) + 1 = 7$

For the second term $n=3$, $(n+1)^2 - (n+1) + 1 = 13$

For the 99th term $n=99$, $(n+1)^2 - (n+1) + 1 = 9901$.

The final value of the expression is $\frac{1}{2} - \frac{1}{9901}$

This will be in between 0.49 and 0.5

48. D

Going by the traditional method since the numbers are easy to calculate, the value of $71^2 - 37^2 - 51$ is 3621.

The prime factorisation of 3621 is $1 \times 3 \times 17 \times 71$

Hence, there are three prime numbers that divide the expression.

49. C

$$x^2 - x - 1 = 0$$

$$x^2 = 1 + x \text{ Or } x^2 - x = 1$$

$$= x^3 - 2x + 1 = x \cdot x^2 - 2x + 1$$

$$= x \cdot (1 + x) - 2x + 1$$

$$= x + x^2 - 2x + 1$$

$$= x^2 - x + 1$$

$$= 1 + 1$$

$$= 2$$

50. B

$$120 = 2 * 2 * 2 * 3 * 5 = 2^3 * 3^1 * 5^1$$

$$\text{Sum of factors} = (2^0 + 2^1 + 2^2 + 2^3) * (3^0 * 3^1) * (5^0 * 5^1) = (1 + 2 + 4 + 8) * (1 + 3) * (1 + 5) = 15 * 4 * 6 = 360$$

$$\text{Ssum of the reciprocals factors} = \frac{360}{120} = 3$$

51. C

$x\%$ of y is 1% of z

$$\frac{x}{100} * y = \frac{1}{100} * z$$

$$xy = z \dots\dots (1)$$

y% of z is 1% of x

$$\frac{y}{100} * z = \frac{1}{100} * x$$

$$yz = x \dots\dots (2)$$

z% of x is 1% of y

$$\frac{z}{100} * x = \frac{1}{100} * y$$

$$zx = y \dots\dots (3)$$

Now,

$$xy + yz + zx = z + x + y$$

Put value of z from equation (1) in equation (2):

$$y * xy = x$$

$$y^2 = 1$$

$$y = 1 \text{ Similarly,}$$

$$x = z = 1$$

$$\text{Hence, } x + y + z = 1 + 1 + 1 = 3$$

52. A

The given expression is $(10^{4n^2+8} + 1)^2$.

The expression will be of the form $(10000\dots1)^2$

Any number of the form $1000(x \text{ times})1$ will be of the form $1000(x \text{ times})20000(x \text{ times})1$.

$$\text{For example } 1001^2 = 1002001$$

So, the sum of the digits will always be $1+2+1=4$

53. B

$$= x^4y + xy^4$$

$$= xy(x^3 + y^3)$$

$$= xy(x + y)(x^2 + y^2 - xy)$$

$$= xy(x^2 + y^2 - xy) \quad [\text{Since, } x + y = 1]$$

$$= xy[(x + y)^2 - 2xy - xy]$$

$$= xy[1 - 3xy]$$

$$\text{Let } xy = a$$

$$S = a[1 - 3a]$$

$$S = a - 3a^2$$

$$\frac{dS}{da} = 1 - 6a$$

For maximum;

$$\frac{dS}{da} = 1 - 6a = 0$$

$$a = xy = \frac{1}{6}$$

After putting $xy = \frac{1}{6}$:

$$= xy[1 - 3xy]$$

$$= \frac{1}{6} \left(1 - 3 * \frac{1}{6} \right)$$

$$= \frac{1}{12}$$

54. **E**

Let first natural number = a

Second natural number = a + 1

15th natural number = a + 14

According to the question:

$$\frac{a+a+1+a+2+\dots+a+14}{15} = 13$$

$$15a + 105 = 195$$

$$a = 6$$

Second largest of these numbers = a + 13 = 19

55. **C**

Let first term $a_1 = a$ and common difference = d

$$a_2 = a + d; a_3 = a + 2d$$

Now,

$$a_1 + a_8 + a_{12} + a_{19} = 224$$

$$a + a + 7d + a + 11d + a + 18d = 224$$

$$4a + 36d = 224$$

$$a + 9d = 56 \dots\dots (1)$$

$$= a_1 + a_2 + a_3 + \dots\dots + a_{19}$$

$$= a + a + d + a + 2d + \dots\dots + a + 18d$$

$$= 19a + 171d$$

$$= 19(a + 9d)$$

$$= 19 * 56$$

$$= 1064$$

56. **B**

$$V \propto \frac{1}{\sqrt{m}}$$

$$m \propto \frac{1}{t^2}$$

Now,

$$V \propto \frac{1}{\sqrt{\frac{1}{t^2}}}$$

$$V \propto t$$

57. **C**

Let side of square = 'a'

$$\text{Diameter of circle} = \text{Diagonal of square} = a\sqrt{2}$$

$$\text{Radius of circle} = \frac{a\sqrt{2}}{2} = \frac{a}{\sqrt{2}}$$

Let side of triangle = s

$$\text{Length of inradius of triangle} = \frac{s}{2\sqrt{3}} = \frac{a}{\sqrt{2}}$$

$$s = a\sqrt{6}$$

$$\text{Area of triangle} = \frac{\sqrt{3}}{4}s^2 = \frac{\sqrt{3}}{4}(a\sqrt{6})^2 = \frac{3\sqrt{3}a^2}{2}$$

$$\text{Area of square} = a^2$$

$$\text{Required ratio} = \frac{3\sqrt{3}a^2}{2} : a^2 = 3\sqrt{3} : 2$$

SRCC GBO Cracku's WhatsApp Group

Join Now

58. C

Radius of large circle = PC + Circum Radius of $\triangle ABC$

[PC = Radius of smaller circle = 1 cm]

$\triangle ABC$ is equilateral triangle with side = 2 cm

$$\text{Circum of an equilateral triangle} = \frac{a}{\sqrt{3}} = \frac{2}{\sqrt{3}}$$

$$\text{Radius of large circle} = 1 + \frac{2}{\sqrt{3}} = \frac{\sqrt{3}+2}{\sqrt{3}} = \frac{3+2\sqrt{3}}{3}$$

59. A

$$a + b < c + d \dots (1)$$

$$b + c < d + e \dots (2)$$

$$c + d < e + a \dots (3)$$

$$d + e < a + b \dots (4)$$

From (1) and (4):

$$d + e < a + b < c + d \Rightarrow e < c$$

From (1) and (3):

$$a + b < c + d < e + a \Rightarrow b < e$$

From (2) and (4):

$$b + c < d + e < a + b \Rightarrow c < a$$

Now,

$$b < e < c < a$$

Let $b = 1, e = 2, c = 3$ and $a = 4$

From (1) and (3):

$$a + b < c + d \Rightarrow 4 + 1 < 3 + d \Rightarrow d > 2 \Rightarrow d > e$$

$$c + d < e + a \Rightarrow 3 + d < 2 + 4 \Rightarrow d < 3 \Rightarrow d < c$$

Hence,

$$b < e < d < c < a$$

Largest number is a and smallest number is b.

60. **B**

$$2^{x+y} = 10 \dots (1)$$

$$2^{y+z} = 20 \dots (2)$$

$$2^{z+x} = 30 \dots (3)$$

From (1), (2) and (3):

$$2^{2(x+y+z)} = 10 * 20 * 30 = 6000 = 400 * 15$$

$$2^{x+y+z} = 20\sqrt{15} \dots (4)$$

From (3) and (4):

$$\frac{2^{x+y+z}}{2^{y+z}} = \frac{20\sqrt{15}}{20}$$

$$2^x = \sqrt{15}$$

61. **A**

Since 'x' and 'y' are positive integers. Let $x = y = 1$

$$x + y = 1 + 1 = 2$$

$$\sqrt{3xy} = \sqrt{3 * 1 * 1} = \sqrt{3} = 1.732$$

$$\frac{x^2+y^2}{x+y} = \frac{1^2+1^2}{1+1} = 1$$

$$\frac{x^4+x^2y^2+y^4}{x^3+y^3} = \frac{1^4+1^2*1^2+1^4}{1^3+1^3} = 1.5$$

Hence, $x + y$ is largest.

62. **A**

The equation shall be: $25a+16b+20c = 213$ and $a+b+c = 12$

Since the final total is 213, the only possibility of a sum ending with 3 is when the resultant of 16 ends with 8 (48 or 128) and the resultant of 25 ends with 5, thereby giving 3 as the unit digit of the sum.

Case 1: When $16b$ is 48

This means $b = 3$

$$\text{Hence, } 25a + 20c = 165$$

$$\text{Now, } a+c = 9 \text{ (as } b = 3)$$

These two equations are inconsistent since one of the values is coming out a negative integer.

Case 2: When $16b = 128$

This means $b = 8$

$$\text{Hence, } 25a + 20c = 85$$

$$\text{And } a+c=4 \text{ (as } b=8)$$

$$\text{Hence, } a=1 \text{ and } c=3$$

By this, we know that the number of months with 25 problems is 1.

63. **A**

$$\text{Let } y = \sin^6 x + \cos^6 x$$

$$y = (\sin^2 x)^3 + (\cos^2 x)^3$$

$$y = (\sin^2 x + \cos^2 x)^3 - 3 \sin^2 x \cos^2 x (\sin^2 x + \cos^2 x)$$

$$y = 1 - 3 \sin^2 x \cos^2 x$$

$$y = 1 - 3(\sin x \cos x)^2$$

$$y = 1 - \frac{3}{4}(2 \sin x \cos x)^2$$

$$y = 1 - \frac{3}{4}(\sin 2x)^2$$

When $\sin 2x$ is maximum, y will be minimum and maximum value of $\sin 2x$ is 1.

$$y(\min) = 1 - \frac{3}{4} * 1 = \frac{1}{4}$$

When $\sin 2x$ is minimum, y will be maximum and minimum value of $\sin 2x$ is 0.

$$y(\max) = 1 - \frac{3}{4} * 0 = 1$$

$$\text{Required ratio} = 1 : \frac{1}{4} = 4 : 1$$

64. **E**

The best way to proceed with this question is to assume m as a very small integer. For this question, let us say that $m=2$

Hence, $a = 11$ and $b = 105$

Hence, $\sqrt{ab+1}$ is $\sqrt{1156}$, which is 34.

Clearly, the number of 3s is $m-1$, as $m-1 = 1$.

This is clearly in line with option A.

65. **B**

Simplifying the expression: $\frac{\log x}{\log 3} \times \frac{\log 2x}{\log x} \times \frac{\log y}{\log 2x}$, which is $\log_3 y$

Now, the RHS of the equation is equal to 2.

Hence, $\log_3 y = 2$, or y is

66. **A**

Let the length of each small rectangular strips is ' l ' and its breadth is ' b '.

Breadth of piece of paper = Length of each small strips = l

Length of piece of paper = Sum of breadth of ' n ' small strips = nb

Now,

$$\frac{l}{b} = \frac{nb}{l}$$

$$l^2 = nb^2$$

$$l = \sqrt{nb}$$

$$l : b = \sqrt{n} : 1$$

67. **A**

Since, $\triangle PQR$ and $\triangle QRS$ are similar equilateral triangles.

Side of $\triangle PQR$ = Diameter of any circle = 4 cm

$$\text{Area of } \triangle PQR = \frac{\sqrt{3}}{4} PR^2 = \frac{1}{2} * QR * \frac{PS}{2}$$

$$\frac{\sqrt{3}}{4} 4^2 = \frac{1}{2} * 4 * \frac{PS}{2}$$

$$PS = 4\sqrt{3}$$

Length of BC = PS + 2 + 2 = $4\sqrt{3} + 4 = (4\sqrt{3} + 1)cm$

68. C

Let length, breadth and height of cuboid is 'l', 'b' and 'h' respectively.

According to the question:

$$l + b + h = 19 \dots\dots (1)$$

$$\text{Diagonal of cuboid} = \sqrt{l^2 + b^2 + h^2} = 5\sqrt{5}$$

$$l^2 + b^2 + h^2 = 125 \dots\dots (2)$$

We know that:

$$(l + b + h)^2 = l^2 + b^2 + h^2 + 2(lb + bh + hl)$$

From equation (1) and (2):

$$19^2 = 125 + 2(lb + bh + hl)$$

$$2(lb + bh + hl) = 361 - 125 = 236$$

$$\text{Surface area of cuboid} = 2(lb + bh + hl) = 236cm^2$$

69. B

Base radius of cone = AQ = BQ = 5 cm

$$AB = 2AQ = 10 \text{ cm}$$

Height of cone = PQ = 12 cm

Let QY = x and OQ = 2x

$$MN = XY = 2x$$

Now,

$$\frac{MN}{AB} = \frac{PO}{PQ}$$

$$\frac{2x}{10} = \frac{12-2x}{12}$$

$$6x = 30 - 5x$$

$$x = \frac{30}{11}$$

$$\text{Diameter of the cylinder} = XY = 2x = \frac{60}{11}cm$$

71. B

ABC is sector that is cut from a circle of diameter 12 cm.

$$\text{So, } AB = AC = \frac{12}{2} = 6\text{cm}$$

Let $AO = R = \text{Radius of circle that circumscribed the sector.}$

$$OM \text{ is perpendicular to } AB. \quad AM = \frac{AB}{2} = \frac{6}{2} = 3\text{cm}$$

$$\text{Since, } \angle BAC = \theta, \text{ then } \angle BAO = \frac{\theta}{2}$$

Now,

In $\triangle AMO$:

$$\sec \frac{\theta}{2} = \frac{AO}{AM}$$

$$\sec \frac{\theta}{2} = \frac{R}{3}$$

$$R = 3\sec \frac{\theta}{2}$$

72. B

River is flowing from A to C, that means A to C is downstream and C to A is upstream.

Since, Time taken to go from A to C in downstream = 7 hours

$$\text{Time taken to go from A to B in downstream} = \frac{7}{2} = 3.5\text{hours}$$

$$\text{Since, time taken to go from A to B and come back to the same point} = 5 \text{ hours } 15 \text{ minutes} = 5 + \frac{15}{60} = 5.25\text{hours}$$

$$\text{Now, time taken to go from B to A} = 5.25 - 3.5 = 1.75 \text{ hours}$$

$$\text{Hence, time taken to go from C to A} = 1.75 * 2 = 3.5 \text{ hours} = 3\frac{1}{2}\text{hours}$$

Explanation [73 - 76]:

In A, 40% of students scored above 60% marks, the number of them being equal to 1160. Hence, the total number of students is 2900.

In B, 30% of students scored above 60% marks, the number of them being equal to 1170. Hence, the total number of students is 3900.

In C, 50% of students scored above 60% marks, the number of them being equal to 1170. Hence, the total number of students is 2340.

In D, 15% of students scored above 60% marks, the number of them being equal to 1200. Hence, the total number of students is 8000.

In E, 40% of students scored above 60% marks, the number of them being equal to 1600. Hence, the total number of students is 4000.

73. D

Hence, D has the largest number of students.

SRCC GBO CRASH COURSE

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

74. **B**

/p>

The number of students scored less than or equal to 60% from A is 1740.

The number of students scored less than or equal to 60% from B is 2730.

The number of students scored less than or equal to 60% from C is 1170.

The number of students scored less than or equal to 60% from D is 6800.

The number of students scored less than or equal to 60% from A is 2400.

The sum of these numbers is 14840.

The average will be $14840/5=2968$.

So, option B is the answer.

75. **A**

/p>

The number of students of schools A and E together = $2900+4000=6900$.

The number of students of school D is more than the number of students of schools A and E together = $8000-6900=1100$.

The percentage more is by $\frac{1100}{6900} \cdot 100 = 15.9$

So, option A is the answer.

76. **E**

Number of students of school B scoring marks less than or equal to 60% = $1170 * \frac{70}{30} = 2730$

Number of students of school C scoring marks less than or equal to 60% = $1170 * \frac{50}{50} = 1170$

Number of students of schools A and D together scoring marks above 60% = $1160 + 1200 = 2360$

Required ratio = $(2730 + 1170): 2360 = 3900: 2360 =$

77. **D**

Production of scooters in 2002 = 140

Production of scooters in 2003 = 80

Drop in number of production of scooters in 2003 from 2002 = $140 - 80 = 60$

Required percent = $(60/140) * 100 = 42.9\%$ (Approx)

78. **A**

Production of motorbikes in 2003 = 130

Production of scooters in 2003 = 80

Required percent = $(130/80) * 100 = 162.5\%$

79. **B**

Average production of motorbikes per year during the period 2000 to 2004 = $\frac{140+120+100+130+110}{5} = 120$

Hence, in the year 2001 production of motorbikes was equal to the average production of motorbikes per year during the period 2000 to 2004.

80. **C**

Number of scooters produced during the period 2000 to 2003 = $120 + 100 + 140 + 80 = 440$

Number of motorbikes produced during the period 2000 to 2003 = $140 + 120 + 100 + 130 = 490$

Required ratio = $440: 490 = 44: 49$

Reasoning and Logical Ability

81. **B**

Although it is given that two unfortunate incidents happened with Mr.A, we cannot say with full conviction that misfortune 'never' comes alone. The word never makes it an over-stretched statement. Hence, the conclusion is a long drawn one.

82. **D**

It is given that magazines 'often' have reader's column, and a group of friends will launch a magazine. Hence, they may or may not have a reader's column. Hence, we don't have enough data to substantiate the column.

83. **A**

Since both statements show that certain unachievable/seemingly impossible things were done by people having strong faith, we can necessarily deduce that faith has great power. This is because the seemingly impossible tasks clearly had the support of immense faith.

84. **B**

The first statement is not something that can be proven. Also, the conclusion is again a superstitious statement. Hence, we cannot be so sure of a conclusion which is superstitious and cannot be deduced from a logical statement. This makes the conclusion a long drawn one.

85. **B**

The first statement talks about negligence playing a role in 'most' of the accidents. The second statement describes how a cobbler was hit by a bus. However, we cannot deduce that the cobbler was negligent in this case, as not all accidents happen due to negligence. Hence, this is a long-drawn one.

86. **B**

Hair is on the head, and similarly, teeth are inside the mouth.

87. **B**

Fore and hind are totally opposite in nature (antonyms). Similarly, north and south are antonyms.

90. **A**

As a watch is used to measure time, the barometer is used to measure pressure. Option B is close yet incorrect, as lactometer is used to measure milk's density.

91. **D**

Statement 1: R is taller than P. This statement alone is not sufficient to answer the question.

Statement 2: Q is taller than P. This statement alone is not sufficient to answer the question.

Combining the statements, we get both Q and R to be taller than P. Hence, P is the shortest.

So, the correct choice is Option (D).

92. **B**

Suppose A's salary is $4x$ and B's salary is $3x$.

Statement 1: B's salary is 75% of that of A's salary. This statement is the same as the original statement since 75% equals $\frac{3}{4}$. So, we don't get any valuable information from this statement.

Statement 2: B's salary is 4500 Rs.

Combining with original statement, $3x = 4500$

Therefore, $x = 1500$

And $4x = 6000$.

Hence, we get A's salary as Rs 6000.

So, the second statement is sufficient to get A's salary. Hence Option (B).

93. **C**

Statement 1: Total weight of the books on the table is 130 kg.

This does not tell us anything on the number of books.

Statement 2: Total weight of table is 130 kg.

Again, this statement does not tell us anything on the number of books.

Combining the 2 statements, also does not give us any information on the number of books.

Hence, Option C.

94. **A**

lee pee tin - Always Keep Smiling.

Statement 1: tin lut lee - Always Keep left

Combining the code with the given statement, tin and lee stand for Always and keep, hence, pee should stand for Smiling. Thus, this statement alone is sufficient to get the code for Smiling.

Statement 2: dee pee - Rose smiling

Combining the code with the given statement, dee stands for Rose and pee stands for smiling. Thus, this statement also alone is sufficient to get the code for Smiling.

Hence Option (A).

95. **B**

If we know that X is 22 years old during September, 1993, we can calculate his present age by adding up the number of years from 1993 to present. Hence statement 2 is sufficient to get X's present age. Statement 1 mentions the month but not the year, so that statement alone is not sufficient to give us X's age.

96. **C**

The statement says: A further confirmation by the Finance Minister that the prices of essential items would not be raised was welcome feature for the public.

Implication 1: He proposes to raise prices of luxury items. The statement says that the prices of essential items would not be raised, but it does not mention anything about the price of the luxury items. Hence it is not an implicit implication.

Implication 2: Some people had doubted the Finance Minister's announcement regarding the stability of prices of essential items. The statement does not say anything about the people's reaction to the Finance Minister's announcement on the stability of price of essential items. So, we are not sure if they doubted the announcement. Hence this is also not an implicit implication.

Hence, option (C).

97. **A**

The statement says: Prayers are sometimes answered when there is no chance or hope.

Implication 1: Some times, we do get helped miraculously. This is an implicit implication because, it is a direct implication of the statement that the prayers are answered miraculously when there is no chance or hope.

Implication 2: God shows favour only when we are in absolute despair. This is not an implicit implication because the statement describes the scenario when there is no chance or hope, but it never says that prayers are not answered otherwise. Prayers may be answered even when we are not in absolute despair or hopeless.

Hence, option (A).

98. C

The statement says: Virtually all bosses are problem bosses in one way or the other.

Implication 1: No employee other than boss creates problems. This statement says only about bosses. It does not mention anything about employees other than bosses. So, this is not an implicit implication.

Implication 2: Boss and employees never have coordination. This statement is not related to the given statement in any way. So, this is also not an implicit implication.

Hence, option(C).

99. A

The statement says: First defeat often becomes a key to victory for some players.

Implication 1: After first defeat they come to know where they stand and what they have to achieve. This gives us a reason why defeat helps some players to be victorious for the future. So, this is an implicit implication.

Implication 2: After first defeat, every player is bound to win. This statement does not provide any reason as to why defeat becomes a key to victory for some players. So this is not an implicit implication.

Hence, Option (A).

100. D

The statement says: Road and other areas around hospitals are marked as silence zone.

Implication 1: Hospitals do not have sound-proof doors. If hospitals did have sound-proof doors, the areas did not need to be marked as silence zone. So this implication is implicit.

Implication 2: Noisy vehicles disturb patients. Again, if noisy vehicles did not disturb patients, they don't need to be marked as silence zones. So this implication is implicit as well.

Hence, Option (D).

Explanation [101 - 105]:

Considering the block of logic, and substituting words by their position in the statement, i.e Original statement (You do things to help others in difficulty) -> 12345678

Step 1: 21645387

Step 2: 26154837

Step 3: 26518437

Step 4: 62581473

...

For getting step 7: We impose step 3 transformation on the step-4 transformed word 62581473.

Let's suppose the Step-4 transformed word is A, and the Step-7 transformed word is B.

Therefore applying Step-3 transformation on A will give us B.

A = 62581473

B = 26518437 transformation on A = [2 index of A][6 INDEX OF A][5 index of A][1 index OF A][8 index of A][4 index of A][3 index of A][7 index of A] = 24163857.

101. C

Substituting the words in the given statement 'why are you not in contact with me' to Step-2 word -> 26154837

2 why

6 are

1 you

5 not
4 in
8 contact
3 with
7 me.

Now 7th Step word = 24163857 = Why in you are with contact not me.

Hence, Option C.

102. **B**

Considering the block of logic, and substituting words by their position in the statement, i.e Original statement (You do things to help others in difficulty) -> 12345678

Step 1: 21645387

Step 2: 26154837

Step 3: 26518437

Step 4: 62581473

...

For getting step 6: We impose step 2 transformation on the step-4 transformed word 62581473.

Let's suppose the Step-4 transformed word is A, and the Step-6 transformed word is B.

Therefore applying Step-2 transformation on A will give us B.

A = 62581473

B = 26154837 transformation on A = [2 index of A][6 INDEX OF A][1 index of A][5 index OF A][4 index of A][8 index of A][3 index of A][7 index of A] = 24618357.

Therefore the word after 6th step = B = Above is the message to you from me = 24618357.

2 Above
4 is
6 the
1 message
8 to
3 you
5 from
7 me

Word after 3rd step = 26518437 = Above the from message to is you me.

Hence, Option B.

103. **C**

Considering the block of logic, and substituting words by their position in the statement, i.e Original statement (You do things to help others in difficulty) -> 12345678

Step 1: 21645387

Step 2: 26154837

Step 3: 26518437

Step 4: 62581473

...

Consider the statement given in the question, I am talking about your Delhi Patna Agra.

Assigning index to each word in their order in the statement:

I - 1

am - 2

talking - 3

about - 4

your - 5

Delhi - 6

Patna - 7

Agra - 8

The second statement is About am I talking Delhi Agra Patna you. Writing in the form of indices of the words in the original statement, it becomes 42136875.

Step 8 arrangement gives us the same.

For getting step 8: We impose step 4 transformation on the step-4 transformed word 62581473.

Let's suppose the Step-4 transformed word is A, and the Step-8 transformed word is B.

Therefore applying Step-4 transformation on A will give us B.

A = 62581473

B = 62581473 transformation on A = [6 index of A][2 INDEX OF A][5 index of A][8 index OF A][1 index of A][4 index of A][7 index of A][2 index of A] = 42136875.

Hence the right answer is step VIII.

104. **D**

Therefore the word after 7th step = B = Serious I the am to about you conversation

105. **A**

Considering the block of logic, and substituting words by their position in the statement, i.e Original statement (You do things to help others in difficulty) -> 12345678

Step 1: 21645387

Step 2: 26154837

Step 3: 26518437

Step 4: 62581473

...

For getting step 8: We impose step 4 transformation on the step-4 transformed word 62581473.

Let's suppose the Step-4 transformed word is A, and the Step-8 transformed word is B.

Therefore applying Step-4 transformation on A will give us B.

A = 62581473

B = 62581473 transformation on A = [6 index of A][2 INDEX OF A][5 index of A][8 index OF A][1 index of A][4 index of A][7 index of A][2 index of A] = 42136875.

Therefore the word after 8th step = B = For am I waiting reply future in your

106. **D**

Statement 1. $A \leq K$

Statement 2. $N < A$

Statement 3. $M=N$

Statement 4. $R>M$

Hence $R>M=N<A\leq K$

Conclusion 1. $K>N$ True

Conclusion 2. $N<R$ True

Hence, option D.

107. **C**

Statement 1. $A > T$

Statement 2. $R\geq A$

Statement 3. $D=R$

Statement 4. $S<D$

Therefore: $S<D=R\geq A>T$

Conclusions:

1. $D=A$ May/may not be true (Can't be definitely termed as true)

2. $D>A$ May/may not be true (Can't be definitely termed as true)

Hence, Option C

109. **D**

$R \times S \rightarrow R < S$

$D - E \rightarrow D > E$

$G \div S \rightarrow G \geq S$

$E + G \rightarrow E = G$

Hence, $D > E = G \geq S > R$

Conclusion: 1. $R < D$ True

2. $D > G$ True

Hence Option D

110. **A**

$M = W \rightarrow M \leq W$

$B + A \rightarrow B = A$

$M + A \rightarrow M = A$

$G - W \rightarrow G > W$

Hence, $A = B = M \leq W < G$

Conclusions:

1. $B + M \rightarrow B = M \rightarrow$ True

2. $M - B \rightarrow M > B \rightarrow$ False

Hence, Option A

Explanation [111 - 117]:

Lets use the following symbols for male and female: Male - ' and Female - ".

For the order of intelligence, lets rank them from 1 to 7, where 1 denotes most intelligent and 7 denotes the least intelligent.

From hint (3), we get G is a female and the most intelligent. Therefore, $G''(1)$.

Using hint (4) and (7), we get that B is the father of E, and F is the grandfather of E, and E is male. Also, we get E as the least intelligent and F as the second most intelligent. So, we can map them as

Using hint (10), we get that D is another son of F. Adding it to our mapping, we get,

Using hint (2) which says there are 2 married couple, and hint (11) that says there are no widow or widower, we get to know the married couples are F and his wife and B and his wife.

Using hint (5), we get that C has one son and one daughter, so C can not be F's wife, because he has 2 sons, so, C is the wife of B. Also, B and C have a daughter. Mapping into the existing solution, we get:

Now, we have 2 people remaining, both are females. One of them is the daughter of B and C, and the other one is the wife of F. Using hint (9) that none of them married topped the IQ test, and using hint (3) that G is the topper of the IQ Test, we get G as the daughter of B and C, and the remaining person A is the wife of F. Mapping into the figure, we get,

From hint (10), D is more intelligent than B, but less intelligent than C. Also, using (8), B is more intelligent than A. Using hint (5), C is more intelligent than B.

We know that G is ranked 1, F is ranked 2, E is ranked 7. Using the remaining ranks and applying them to the deduction from the previous line, we get, C as 3, D as 4, B as 5 and A as 6. Hence the figure comes out as:

So, this is our final figure, depicting all relationships and the intelligence test ranks.

111. **A**

From the fig., A is married to F.

Hence, option (A).

112. **D**

From the figure, G is the daughter of D's brother, hence niece.

Option (D).

113. **A**

From the diagram, we can deduce that C is the third most intelligent.

Hence Option (A).

114. **A**

C is A's Daughter-In-Law, whereas A is C's mother-in-law.

Hence Option (A).

115. **D**

Hence, A is of different generation than B,C and D.

Hence, option (D).

116. **A**

Hence, A whose rank is 6, is less intelligent than all but E whose rank is 7.

Option (A).

117. **C**

Lets use the following symbols for male and female: Male - ' ' and Female - ''.

For the order of intelligence, lets rank them from 1 to 7, where 1 denotes most intelligent and 7 denotes the least intelligent.

From hint (3), we get G is a female and the most intelligent. Therefore, G''(1).

Using hint (4) and (7), we get that B is the father of E, and F is the grandfather of E, and E is male. Also, e get E as the least intelligent and F as the second most intelligent. So, we can map them as

Using hint (10), we get that D is another son of F. Adding it to our mapping, wet get,

Using hint (2) which says there are 2 married couple, and hint (11) that says there are no widow or widower, we get to know the married couples are F and his wife and B and his wife.

Using hint (5), we get that C has one son and one daughter, so C can not be F's wife, because he has 2 sons, so, C is the wife of B. Also, B and C have a daughter. Mapping into the existing solution, we get:

Now, we have 2 people remaining, both are females. One of them is the daughter of B and C, and the other one is the wife of F. Using hint (9) that none of them married topped the IQ test, and using hint (3) that G is the topper of the IQ Test, we get G as the daughter of B and C, and the remaining person A is the wife of F. Mapping into the figure, we get,

From hint (10), D is more intelligent than B, but less intelligent than C. Also, using (8), B is more intelligent than A. Using hint (5), C is more intelligent than B.

We know that G is ranked 1, F is ranked 2, E is ranked 7. Using the remaining ranks and applying them to the deduction from the previous line, we get, C as 3, D as 4, B as 5 and A as 6. Hence the figure comes out as:

So, this is our final figure, depicting all relationships and the intelligence test ranks.

Hence, B is married to C.

Option (C).

118. B

Starting the sequence with **abc**. For the next set of terms, we use the original set (i.e abc) after including an additional a.

So, the next set of terms becomes **aabc**.

Similarly for the next set of terms, we add **b** to the previous term in the right place. Hence it becomes **aabbc**.

In a similar way, the next set of terms become **aabbcc**.

So, the final sequence comes out as **abcaabcaabbcaabbcca**.

119. **D**

We start the series with **a,b,c,d** as the first 4 terms.

The next 4 terms can be derived from the first 4 in the following way.

1. Place the last term(i.e d) as the first term of the new series.
2. The next terms of the new series are the next terms of the original series in a circular fashion (a,b,c,**d,a,b,c**,d....etc)

So the second set of terms is **d,a,b,c**.

In a similar way, the subsequent terms should be c,d,a,b and b,c,d,a.

The final series is **a,b,c,d,d,a,b,c,c,d,a,b,b,c,d,a**.

120. **A**

We start the series with **a,b,c** as the first 3 terms.

For the next 3 terms, we start with the last term i.e 'c' of the previous series(**a,b,c** in his case), and continue with the next 2 terms in circular fashion (a,b,**c,a,b**,c). So the second set of 3 terms comes out as **c,a,b**.

Continuing in a similar way, the next 3 terms are **b,c,a**, and the subsequent terms are **a,b,c**.

Hence, the final series turns out as a,b,c,c,a,b,b,c,a,a,b,c.

General knowledge
