Verbal Ability

Instructions [1 - 4]

Read the given passage and answer the questions that follow.

In the past four decades, people around the world have become increasingly aware of the problem of energy. Traditional energy sources such as oil and natural gas are dwindling rapidly. In many countries, this has meant extracting natural resources at the expense of the environment. In order to solve this problem, scientists are looking for new ways to satisfy the world's energy needs.

One possible solution to the energy problem is a “solar paint” called “Sun-believable”. Scientists at the University of Notre Dame have invented a paint that can produce energy. The paint has energy-producing particles called “quantum dots” that convert sunlight into electricity. Despite the promise of solar paint, there are still some problems. While the paint only converts about one per cent of light to energy, it is cheap to make and can be used anywhere. Scientists are trying to make the paint more efficient in converting sunlight to energy.

Garbage and waste can also be changed to energy but there are some issues with this method. This method, called 'Waste to Energy' or WtE, has become popular in the last decade. In this, solid waste is burned at very high temperatures to create energy. However, the burning process causes pollution and creates more problems. Some new energy plants use a cleaner method of converting waste to energy. However, these types of energy plants still emit carbon dioxide (CO₂), which contributes to other environmental problems. Waste to Energy plants remain somewhat controversial among scientists and environmental activists. Finally, the use of wind as a source of energy is becoming more popular recently. Floating wind farms are large groups of big wind turbines (fans) that many countries are beginning to build. Building the turbines on the ocean is more effective than building them on land because there tends to be a steadier and stronger wind on the ocean. Building the farms on the ocean also helps save valuable space in crowded countries.

1. According to the passage, the disadvantage of 'solar paint' is that the:

- A** manufacturing process takes time
- B** paint is cheap to make and can be used anywhere
- C** scientists are not able to make the 'quantum dots' better
- D** paint only converts about one percent of light to energy

10 SRCC GBO Mocks For ₹499 [BUY NOW](#)

2. Based on the passage, we can say that the problem with the 'Waste to Energy' method is that it:

- A** has led to a debate between scientists and activists
- B** is not very energy efficient
- C** leads to more pollution
- D** needs new types of energy plants

3. In the last paragraph of the passage, the writer suggests that:

- A** in the last few years many countries have come together to develop floating wind farms

- B building floating wind turbines is better because the wind is stronger and steadier in the ocean
- C we will see a significant reduction in the number of floating wind turbines in use within the next decade
- D crowded countries must consider using wind as a source of energy because it saves space

4. According to the passage, conventional energy sources

- A have disappeared in the last few decades
- B have become more easily available
- C are not easy to extract
- D are diminishing quickly

Instructions [5 - 8]

Read the given passage and answer the questions that follow.

The tale, the parable and the fable are all common and popular modes of conveying instruction - each being distinguished by its own special characteristics.

The tale is the narration of a story either founded on facts, or created solely by the imagination, and not necessarily associated with the teaching of any moral lesson. A parable is a short story used to illustrate a moral or spiritual lesson and it comes from a Greek word meaning 'comparison'. The fable, a short fictional story, partly agrees with, and partly differs from both of these. It will contain, like the tale, a short but real narrative; it will seek, like the parable, to convey a hidden meaning, and that not so much by the use of language, as by the skillful introduction of fictitious characters; and yet unlike both the tale or parable, it will ever keep in view, the great purpose of instruction, and will necessarily seek to inculcate some moral maxim, social duty, or general truth.

The purpose of a fable is to convey moral messages to the readers and this objective is usually achieved through animals, birds or trees that behave and speak as human beings. As the story conveyed through the fable progresses, the reader becomes appreciative of all that is pure, honourable and praiseworthy, and critical of all that is low, dishonourable and unworthy. In a fable, the reader receives advice without perceiving the presence of the adviser and it is for this reason that the advice finds greater acceptance. The true fabulist (a writer of fables) therefore, is all of these- a teacher, a corrector of morals, a commender of virtue and a censor of vice. It is in this that the fable scores a point over the tale and the parable.

5. The passage suggests that one of the objectives of a fable is to:

- A make the reader understand animal nature
- B uplift a man's character
- C discuss the problems of contemporary society
- D describe the past

6. By stating that the fabulist is a 'great teacher, a corrector of morals, a censor of vice, and a commender of virtue', the writer implies that:

- A there is a need for more fabulists because they can reform society

- B fabulists must be honoured and respected above other writers
- C as a multifaceted personality the fabulist can take the place of teachers and censors
- D the fabulist plays an important role in society because his writings fulfil many purposes

7. Based on the passage, it could be suggested that the difference between a tale and a parable lies in the:

- A presence of a concealed meaning
- B depiction of facts
- C length of the narrative
- D choice of characters

8. The main idea of the passage is that:

- A the reader should learn to appreciate the creativity of the writer of tales, parables and fables.
- B the fable is superior to the tale and the parable because it conveys a moral in the form of a story
- C the fable's message may be hidden because it is based on both facts and imagination.
- D the difference between the tale, the parable and the fable lies in the portrayal of characters.

Instructions [9 - 12]

Read the given passage and answer the questions that follow.

Beneath the snow lies the subnivium (from the Latin *nivis* for snow, and *sub* for below), a small, protected area that is insulated and maintains a constant temperature. This microhabitat turns traditional thinking about snow on its head. Thanks to the emerging field of winter ecology, we now know that snowy environments have lives of their own. "Without snow, plant and animal life would be completely different," says biologist Jonathan Pauli of the University of Wisconsin-Madison. Pauli and scientists such as Ben Zuckerberg, are members of a new breed of researchers called winter ecologists who study the relationships among animals, plants and their snow-covered environments.

Their studies have shown that tiny mammals like shrews don't migrate but spend their winters in the subnivium. For some of the tiniest forms of life - fungi, invertebrates, soil bacteria and plant roots- snow maintains a mild winter temperature in which they can survive, compared to the killing cold up above. Plants and soil benefit from this layer because the lack of a hard frozen surface lets plant roots function. The active fungi release important nutrients to plants. As the temperature warms, the snow slowly melts and provides water for spring flowers. On an average, snow covers almost 18 million square miles of the planet each year. However, climate change is upsetting that chilly balance. Winter ecologists are studying how the lack of snow cover directly affects the ecology of many subnivium ecosystems, exposing organisms to temperatures for which they are not adapted.

9. The main idea of the passage is:

- A ecologists have recently become more interested in studying the subnivium and they have come up with a variety of creative approaches
- B we know very little about plants and animals that survive winter beneath the snow

- C a secret world, unseen by most humans, is found just beneath the winter snow and it can be adversely affected by climate change
- D the world is experiencing less snow due to climate change and this has led to a new field of study called winter ecology

10. Based on the information in the fourth paragraph, it can be reasonably inferred that:

- A as compared to other habitats, animals feel more comfortable when there is heavy snowfall
- B the tiniest to the largest forms of life depend on the frozen surface for their food
- C the snow cover in winter helps to sustain many forms of life
- D the temperature in the subnivium is much higher than the surface and doesn't allow organisms to survive

11. Which of the following sentences is best supported by the last paragraph?

- A Changes in the amount of snow covering the ground will affect the access to water resources.
- B Climate change will have important consequences for species that need the subnivium to survive.
- C The subnivium starts forming as soon as snow starts to build up on the ground.
- D Some plant and animal species are dependent on the layers of snow for their survival.

12. In the second paragraph of the passage, the author seems to imply that:

- A winter ecologists do not know much about the subnivium because it lies beneath the snow
- B the best time to see the subnivium is when the snow has nearly melted
- C in contrast to what has been understood for many years, the winter environment is far from dormant
- D because of historical reasons scientists did not think it important to study the winter environment

13. Select the most appropriate option to fill in the blank.

Famous for being a long distance swimmer, Mihir Sen was the first Asian to swim _____ the English Channel.

- A through
- B across
- C over
- D against

14. Given here is a paragraph. Its last sentence is missing. Select the most appropriate sentence to complete the paragraph.
Most of the year 2021 was focused on the revival of businesses. Companies have continued their investments in up-skilling and re-skilling their workforce. In fact, in 2021, investments in up-skilling saw 18% to 25% increase. _____

- A The pandemic has taught employers the importance of having a multi-skilled work force.
- B AI and machine Learning became more prevalent in the skilling process.
- C Some of the sectors where these investments have gone up are IT, e-commerce, pharma and EdTech, among others
- D The year 2021 also made blended learning more acceptable

15. Select the most appropriate option to fill in the blanks.

Mr. Joshi _____ from his trip to Maldives. He _____ hard to finish the pending work since then.

- A had returned ; is trying
- B returns; tries
- C returned ; was trying
- D has returned ; has been trying

16. Select the most appropriate option to fill in the blanks.

An opportunity _____ at everyone's door but some people miss it and some people _____ them into success stories.

- A hits ; alter
- B thumps ; trade
- C knocks ; convert
- D blows ; exchange

17. Select the odd one out.

- A Selectively
- B Sumptuously
- C Plentifully
- D Richly

18. Select the most appropriate set of idioms to fill in the blanks.

His offhand remarks _____ of the members of the committee. But the Chairman told the members to _____ and stop arguing.

- A ruffled the hair ; cool their heels

- B ruffled the feathers ; cool it
- C ruffled the hair ; cool it
- D ruffled the feathers ; cool their heels

19. Sentences of a paragraph are given below. While the first and the last sentences (S1 and S6) are in the correct order, the sentences in between are jumbled up. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.

- S1. I was standing at the gaol gate talking to the gaoler when we noticed a man carrying a strange animal.
 A. This animal had been twisted round in a most peculiar way forming a kind of knot.
 B. The gaoler sent for him and I saw something between a lizard and crocodile, about two feet long with claws and a scaly covering.
 C. When asked by the gaoler what he proposed to do with it, he replied with a broad smile that he would make bhujji- a kind of curry - out of it.
 D. Its owner had passed a pole through this knot and was merrily carrying it in this fashion.
 S6. Subsequently I discovered from reading F W Champion's book -The Jungle in Sunlight and Shadow- that this animal was the pangolin.

- A ABCD
- B BCDA
- C BADC
- D CBAD

20. Select the odd one out.

- A Scurry
- B Stroll
- C Saunter
- D Amble

21. The following sentence has been divided into parts. One of them may contain an error. Select the part that contains the error from the given options. If you don't find any error, mark 'No error' as your answer.
 Despite of her busy schedule / she decided to visit / her friend on her birthday.

- A Despite of her busy schedule
- B she decided to visit
- C No error
- D her friend on her birthday

22. Select the most appropriate synonym of the given word.
 Impenetrable

- A Impassable

- B Impersonal
- C Impeccable
- D Impossible

23. Select the most appropriate set of idioms to fill in the blanks.

A new project is _____ in Central Delhi. My father, being the chief architect, is always _____, even on weekends.

- A on the air ; on the boil
- B on the card ; on the boil
- C on the air ; on call
- D on the cards ; on call

24. Select the most appropriate option to fill in the blanks.

My father _____ that he _____ me to school tomorrow.

- A has promised ; will drop
- B is promising ; is dropping
- C promised ; will drop
- D promises ; drops

25. Four statements are given here, labeled A, B, C and D. Among these, three statements are in logical order and form a coherent paragraph. From the given options, choose the option that does NOT fit into the theme of the passage.

- A. As per the Census 2011, as many as 76.34 crore persons in the country are literate.
- B. The overall literacy rate works out to be 72.9 %for the country.
- C.As per the Census report, the population of Panipat City in 2011 is 2.94 lakhs.
- D. Of these, 43.46 crore are males and 32.88 crore are females.

- A C
- B D
- C A
- D B

26. Select the most appropriate option to fill in the blank.

The flower woman, _____, is very well-off.

- A with which I like to talk

- B from whom I buy roses
- C where the traffic lights are
- D which you were looking at

27. Select the most appropriate option to fill in the blanks.

In this time of economic crisis, such a _____ expenditure of public funds needs to be _____.

- A judicious ; condemned
- B proper ; vindicated
- C lavish ; justified
- D righteous ; criticised

28. Sentences of a paragraph are given below in jumbled order. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.

- A. Suddenly they fell into a deep pit someone had dug to trap foolish animals like them who weren't watching where they were going.
- B. Their wild squawking brought the other animals to the pit.
- C. Ostrich and Emu were racing each other across the Australian outback.
- D. Ostrich and Emu tried to jump out of the pit but it was too deep.

- A DBCA
- B DCAB
- C CADB
- D CABD

WITH DETAILED SOLUTIONS AND ANALYSIS

29. Select the odd one out.

- A Vicious
- B Patient
- C Humane
- D Forgiving

30. Select the most appropriate option to fill in the blank.

The skill of carpet weaving is _____ from generation to generation.

- A handed down
- B handed up
- C handed in
- D handed out

31. Select the most appropriate ANTONYM of the given word.

Repulsive

- A Modest
- B Disagreeable
- C Nasty
- D Attractive

32. Select the most appropriate synonym of the given word.

Contemplate

- A Conceal
- B Consider
- C Conceive
- D Concur

33. Select the option in which the words share the same relationship as that shared by the given pair of words.
drum : beat :: ?

- A trumpet : blow
- B flute : finger
- C guitar : string
- D piano : key

34. Four statements are given here, labeled A, B, C and D. Among these, three statements are in logical order and form a coherent paragraph. From the given options, choose the option that does NOT fit into the theme of the passage.

- A. Teacher attendance is just 85% in primary and middle schools.
- B. Primary school enrollment in India has been a success story.
- C. The enrollment has reached at least 96% since 2009 of which girls make 56% of new students between 2007 and 2013.
- D. Largely due to various programs and drives, the enrollment has increased even in remote areas.

- A A
- B C
- C B
- D D

35. Sentences of a paragraph are given below in jumbled order. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.
- A. He also advised me to come to table.
B. An English passenger, taking kindly to me, drew me into conversation.
C. He laughed at my insistence on abjuring meat, and said in a friendly way, "It is so cold in England that one cannot possibly live there without meat."
D. He asked me what I ate, what I was, where I was going, why I was shy, and so on.
- A DBAC
B BACD
C BDAC
D CBDA
36. Select the option in which the words share the same relationship as that shared by the given pair of words.
shrug : indifference :: ?
- A wave : fatigue
B blink : scorn
C scowl : desire
D nod : assent
37. The following sentence has been divided into parts. One of them may contain an error. Select the part that contains the error from the given options. If you don't find any error, mark 'No error' as your answer.
Group discussion and pair work are / good classroom strategies encourage / students to speak out their ideas.
- A students to speak out their ideas
B No error
C Group discussion and pair work are
D good classroom strategies encourage

38. Select the most appropriate option to fill in the blank.
The secretarial job, _____, was advertised on the internet.
- A for which she has applied
B which she has read
C that she bought
D for which she has written
39. Select the most appropriate option to fill in the blanks.
The migrant workers, feeling tired _____ a long journey, rested _____ the shade of a big banyan tree.

- A before ; in
- B over ; in
- C after ; under
- D until ; under

40. Select the most appropriate option to fill in the blank.

Every year, some boys _____ in the middle of the course due to their family or financial problems.

- A drop off
- B drop by
- C drop out
- D drop in

Data Interpretation

Instructions [41 - 44]

Study the given table and answer the questions that follow.

The table shows the data regarding the number of medals won by countries A, B, C, D, E and F in International games in 2020

Country	Gold Medals	Ratio of the number of silver medals to that of bronze medals	Total number of Gold, Silver and Bronze Medals
A	15	3 : 2	40
B	14	5 : 3	38
C	16	6 : 7	42
D	10	2 : 3	30
E	12	4 : 5	39
F	13	5 : 6	46

41. The total number of Silver medals won by countries C, D and F is approximately what per cent of the total medals won by countries A, B and C together?

- A 37.5%
- B 25%
- C 29.2%

D 28.5%

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

42. The total number of Gold medals won by countries B, D and E together is what per cent more than the total number of Bronze medals won by countries C and F (correct to one decimal place)?
- A 11.1%
- B 15.6%
- C 13.8%
- D 12.5%
43. The average number of Bronze medals won by all the five countries is what per cent less than the total number of Silver medals won by all the five countries (nearest to an integer)?
- A 83
- B 82
- C 80
- D 78
44. What is the ratio of the total number of silver medals won by countries A and E to the total number of Bronze medals won by countries D and F?
- A 5 : 6
- B 5 : 8
- C 9 : 10
- D 4 : 5

Instructions [45 - 48]

Read the given information and answer the question that follows.

In an institute, 1800 students are studying five different courses -A, B, C, D and E. The number of male students is $57\frac{1}{7}\%$ more than that of female students. Out of male total students, 24% are studying course B and the ratio of the number of female students to male students studying this course is 5:6. The total number of students studying course C is 342, out of which female students are 104. 18% of female are studying course A and the ratio of male students to female students studying A is 4:3. One-fifth of total males are studying course D and the number of female students studying D is 25% less than that of males studying D. The remaining male and female students are studying course E.

45. The average number of female students studying courses A, B and C is approximately what per cent less than the total number of male students studying courses D and E?

A 65.1%

- B 63.6%
- C 61.8%
- D 62.7%

46. What is the ratio of the number of male students studying course B to that of female students studying course D?

- A 5 : 3
- B 24 : 35
- C 8 : 5
- D 2 : 1

47. The number of male students studying course A is what per cent of the total number of students studying course D (correct to one decimal place)?

- A 76.4%
- B 49.1%
- C 43.6%
- D 56.9%

48. The difference between the number of male and two times the female students studying course E is x . Which of the following is true?

- A $x < 34$
- B $34 < x < 38$
- C $38 < x < 42$
- D $42 < x < 46$

Instructions [49 - 52]

Study the given bar graph and answer the question that follows.

Imports and Exports of a company ABC over a period of six years

49. What is the ratio of the total imports in 2015, 2017 and 2019 to the total exports in 2014, 2015 and 2017?

- A 2 : 1
- B 14:9
- C 10 : 9
- D 3 : 2

VIDEO SOLUTION

50. In which year(s) was/were the exports less than the imports by p%, where p lies between 25 and 30?

- A 2016 and 2019
- B 2019
- C 2014 and 2018
- D 2015

VIDEO SOLUTION

51. In 2020, exports decreased by the same percentage relative to 2019 as they had from 2017 to 2018, while imports increased by the same percentage relative to 2019 as they had from 2017 to 2018. In 2020, by what percentage were exports less than imports (nearest integer)?

- A 35%
- B 39%
- C 34%
- D 36%

VIDEO SOLUTION

52. The average exports (per year) in 2015, 2018 and 2019 are approximately what percentage less than the imports in 2018?

- A 28.9%
- B 40.6%
- C 35.8%

D 27.4%

VIDEO SOLUTION

Instructions [53 - 56]

Study the given pie charts and answer the question that follows.

The pie chart shows the percentage wise distribution of expenditure of a family in January 2020 and December 2020 on items A, B, C, D, E and F.

The expenditure in December is 20% more than that in January.

Total expenditure in January = ₹54,000

53. The expenditure on item D in December is ₹108 more than the total expenditure in January over items:

- A C and E
- B B and C
- C B and F
- D E and F

SRCC GBO Cracku's WhatsApp Group

Join Now

54. The average expenditure on items A, C and D together in January is what per cent less than the expenditure on item E in December?

- A 15%
- B 14.3%
- C 12%
- D 12.5%

55. In January, if the income of the family is 20% more than the total expenditure, and the income in December is 15% more than the total expenditure in the same month, then by what per cent are the savings in January more than that in December (nearest to an integer)?

- A 10%
- B 11%
- C 15%
- D 12%

56. On which item was there 4% decrease/increase in expenditure in December as compared to that in January?

- A C
- B A
- C B
- D F

- D** 18.33%

Study the given bar graph and answer the questions that follows.

61. What is the ratio of the total production of rice in 2016 and 2018 to the total production of maize in 2015 and 2019?

- A 12 : 13
- B 4 : 5
- C 2 : 3
- D 14 : 15

62. In which year was the increase in the production of maize the second largest as compared to its preceding year?

- A 2018
- B 2017
- C 2019
- D 2016

63. The average production of wheat (per year) in 2015, 2017 and 2019 is what per cent less than the production of maize in 2018?

- A 20%
- B 25%
- C 22.5%
- D 17.5%

64. In 2020, the production of wheat increased over 2019 by the same percentage as in 2018 over its preceding year. If 16.5% of the production of wheat in 2020 was exported, then the amount of wheat left for domestic consumption (in lakh tonnes) was

approximately:

- A 366.2
- B 364.4
- C 360.8
- D 368.4

Instructions [65 - 68]

Study given information and answer the questions that follows.

Companies X and Y, both produce all the five products A, B, C, D and E. The total units of all these products produced by X and Y together are 5500 and company Y produces 20% more units than company X. Out of the total units of the products produced by company Y, 12% are of the product B and company X produces 30% more units of B than Y. The ratio of the units of product A produced by companies X and Y is 5 : 6 and total number of units of A is 990. The number of units of product D produced by company X is 650 and company Y produces 40% more of it. The company X produces 550 units of C and company Y produces 55 more units of it. The units of the products left with companies X and Y are of product E.

65. The number of units of product C produced by company Y is what per cent of the total number of units of product B and E produced by company X (correct to one decimal place)?

- A 71.2%
- B 70.6%
- C 59.4%
- D 67.5%

66. What is the ratio of the number of units of product B produced by company X to the number of units of product E produced by company Y?

- A 9 : 10
- B 18 : 35
- C 4 : 5
- D 13 : 15

67. The different between the number of units of product A produced by company X and 40% of the number of units of products D produced by company Y is k. The value k lies between.

- A 85 and 90
- B 80 and 85
- C 75 and 80
- D 90 and 95

68. The average number of units of products A, B and E produced by company Y is what percentage less than the average number of units of products C and D produced by company X?

- A 15.6%
- B 17.5%
- C 15.2%
- D 16.4%

Instructions [69 - 72]

Study the given bar graph and answer the questions that follows.

Profit(loss) = Income - Expenditure

$$\text{Percentage profit(loss)} = \frac{\text{Profit(loss)} \times 100}{\text{Expenditure}}$$

69. What is the ratio of the profit earned by the company in 2015 and 2017 together to the loss incurred in 2016 and 2019 together?

- A 17 : 21
- B 3 : 4
- C 3 : 5
- D 5 : 6

70. What is the percentage loss incurred by the company in 2016 and 2019 together (correct to one decimal place)?

- A 18.9%
- B 46.7%
- C 19.8%

D 28.6%

71. What is the average profit (in ₹ crores) earned by the company in 2015, 2017, 2018 and 2020 together?

A 121.25

B 120

C 118.75

D 116.5

72. If the ratio of expenditures of the company 2018 and 2021 was 7 : 11 and the company earns a profit of 18% in 2021, then what was the income (in ₹ crore) of the company in 2021?

A 850

B 676.5

C 825

D 973.5

Instructions [73 - 76]

Study the given bar graph and answer the questions that follows.

$$\text{Profit percent} = \frac{\text{Income} - \text{Expenditure}}{\text{Expenditure}} \times 100$$

73. If the expenditures of companies A and B in 2019 were equal and the total income of both companies was ₹354 crores, then what was the total expenditure (in ₹ crores) of A and B in that year?

A 308

B 354

C 250

D 240

74. If the incomes of company B in 2016 and 2020 were equal and the expenditure in 2016 was ₹240 crores, then what was the expenditure (in ₹ crores) in 2020?

A 216

B 218.5

C 217.5

D 215

75. If the expenditure of company A in 2018 and 2020 was the same, then what was the ratio of the incomes of the company in 2018 and 2020, respectively?

A 29 : 28

B 17 : 15

C 28 : 27

D 8 : 7

76. If the income of company B was ₹446.4 crores in 2017, then what was its expenditure (in ₹ crores) in that year?

A 292

B 285

C 295

D 288

Instructions [77 - 80]

Study the given table and answer the questions that follows.

School Year	X		Z		Z	
	A	P	A	P	A	P
2016	250	200	200	175	300	285
2017	275	250	250	225	320	304
2018	280	242	270	254	380	362
2019	300	275	300	280	352	325
2020	350	300	325	276	400	381

The table shows the number of students Appeared (A) and Passed (P) in a examination, from three schools X, Y and Z in five years.

77. The ratio of boys and girls passed from school Y in 2017 is 7 : 8 and that of boys and girls passed from school X in 2019 is 12 : 13. The percentage of girls appeared from school Z in 2020 is 80%. The total number of girls passed from schools X in 2019 and from Y in 2017, is what per cent less than the number of girls appeared from school Z in 2020 (correct to one decimal place)?

- A 24.5%
- B 19.4%
- C 17.8%
- D 21.7%

78. In which year was the difference between the number of students appeared and the number of students passed the second lowest in school Z?

- A 2017
- B 2018
- C 2020
- D 2016

79. If m is the average of the number of students passed from school Y over all the five years and n is the average of the number of students passed from all the three schools in 2018, then $m : n$ is equal to:

- A 11 : 13
- B 9 : 13
- C 7 : 10
- D 19 : 21

80. The total number of students appeared from school X in 2016, 2017 and 2019 is approximately what per cent more than the total number of students passed from school Y in 2018 and 2020?

- A 60.2%
- B 56.2%
- C 58.4%
- D 55.7%

Quantitative Ability

81. If $(x^2 + \frac{1}{x^2}) = 8.25$, what is the value of $(x^3 - \frac{1}{x^3})$?

- A** 30.625
- B** 20.625
- C** 30.375
- D** 20.375

82. x varies inversely as $(2y^2 - 5)$ and is equal to 25 when $y = 15$. Find the value of x when $y = 10$ (approximate value).

- A** 57
B 55
C 53
D 51

83. What is the composite function $(f \circ g)(x)$, if

$$f(x) = x + 7,$$
$$g(x) = x^4?$$

- A** $\frac{x^4}{7}$
- B** $(x + 7)^4$
- C** $x^4 + 7$
- D** $x^4 + 7^4$

84. Anil climbs a staircase stage by stage. He climbs the first 10 steps at 10 a.m., 11 more steps at 12.00 p.m. and 20 more steps at 2.00 p.m. Find the total number of steps Anil has climbed.

- A** 11
B 31
C 41
D 21

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

85. What are coordinates of the point that divides the line segment joining the points (4, 4) and (8, 12) internally in the ratio of 3 : 5?
- A (6.5, 9)
B (9, 6.5)
C (5.5, 7)
D (7, 5.5)
86. Seven different coloured lights are fixed on a mast to produce signals by illuminating them. How many signals can be produced, if any number of lights is used?
- A 12,689
B 13,699
C 10,080
D 11,547
87. In a coffee estate there are two varieties of coffee. At what ratio must the two varieties of coffee be mixed together into one at ₹40 per kg and the other at ₹50 per kg? The cost of the mixture is ₹43 per kg.
- A 3 : 10
B 7 : 3
C 2 : 5
D 5 : 2

BUY NOW

88. Find the missing term of the series

5050 , 7381, ? , 14365 , 19306.

- A 10440
- B 10460
- C 10470
- D 10480

89. If a water bill is paid before the due date, overall there is a reduction of 5% on the bill amount. A person paid the bill before the due date he got a reduction of ₹250. Find the amount of the water bill.

- A ₹5,200
- B ₹5,000
- C ₹5,400
- D ₹5,600

90. Two mixtures A and B contain petrol and kerosene. A has 40% of petrol and B has 60% of petrol. If 8 litres of A and 12 litres of B are mixed together, what will be the ratio of petrol and kerosene in the new mixture?

- A 13 : 12
- B 13 : 8
- C 8 : 13
- D 12 : 13

91. If $6^{15} + 6^{16} + 6^{17} + 6^{18}$ is divided by 24, find the remainder of finite series.

- A 9
- B 19
- C 29
- D 39

92. In a big drum there are three cubes of ice whose edges are 5 cm, 7 cm and 9 cm respectively. The ice cubes are melted and formed into a single cube. Find the edge of a new cube (approximate value).

- A 5.6 cm
- B 11.56 cm
- C 10.62 cm
- D 15 cm

93. α and β are the roots of the equation $ax^2 + bx + c = 0$. What is the condition for which $\beta = 5\alpha$?

- A $5b^2 = 24ac$
- B $3b^2 = 12ac$
- C $3b^2 = 16ac$
- D $5b^2 = 36ac$

94. While shifting glass bottles from one country to the other, on an average, 1 out of 9 bottles breaks. What is the probability that out of 4 bottles, at least 3 will arrive safely?

- A $\frac{1024}{6561}$
- B $\frac{512}{6561}$
- C $\frac{512}{2187}$
- D $\frac{2048}{2187}$

95. Consider that $[p_n]$ and $[qn]$ are two arithmetic progressions with 50 elements each. If $[p_n]$ has the elements $a_1 = 4, a_2 = 6$ and so on, and $[qn]$ has $b_1 = 2, b_2 = 5$ and so on, how many common elements do both $[p_n]$ and $[qn]$ have?

- A 11
- B 15
- C 13
- D 16

96. Solve the inequality.

$$\frac{x+1}{2x-1} > 1$$

- A $-\frac{1}{2} > x > -2$
- B $\frac{1}{2} < x < 2$
- C $\frac{1}{2} > x > 2$
- D $-\frac{1}{2} > x > 1$

Solve the inequality.

$$\frac{x+1}{2x-1} > 1 \leftarrow$$

A) $-\frac{1}{2} > x > -2$ B) $\frac{1}{2} < x < 2$
 C) $\frac{1}{2} > x > 2$ D) $-\frac{1}{2} > x > 1$

Handwritten solution steps:

$$\frac{x+1}{2x-1} > 1$$

$$\frac{x+1}{2x-1} - 1 > 0$$

$$\frac{x+1 - (2x-1)}{2x-1} > 0$$

$$\frac{x+1-2x+1}{2x-1} > 0$$

$$\frac{-x+2}{2x-1} > 0$$

$$\frac{-(x-2)}{(x-\frac{1}{2})} > 0$$

$$\frac{(x-2)}{(x-\frac{1}{2})} < 0$$

Number line diagram showing the solution set $\frac{1}{2} < x < 2$.

100. Find the sum of infinity of the series

$$\frac{1}{5} + \frac{3}{5^2} + \frac{1}{5^3} + \frac{3}{5^4} + \dots$$

A $\frac{1}{5}$

B $\frac{1}{2}$

C $\frac{1}{3}$

D $\frac{1}{4}$

101. If the resulting numbers be the consecutive terms of Harmonic Progression, then what number should be added to the numbers 8, 10, 14?

A 2

B -2

C 1

D -1

102. The population of Kompally village is 10,000. The population increases by 10% in the first year and 15% in the second year. Due to increase in pollution the population decreases by 5% in the third year. What will be its population after 3 years (round off number)?

A 12,208

B 12,018

C 12,008

D 12,308

103. What is the value of x in the following equation?

$$3 \log \frac{3}{5} - \log \frac{x}{21} + 2 \log \frac{25}{9} = 0$$

A 35

B 28

C 42

D 14

104. In a cricket stadium, the people are made to sit to watch the match. If the organisers make a row of 15 people each, there will be 10 people left. If they make rows of 20 people each then there will be 15 people left and if they make rows of 24 people each, 19 people will be left. If they make rows of 28 people each there will be 23 people left. Find the minimum number of people present in the stadium.
- A 825
B 805
C 815
D 835
105. The ratio of the number of sides of two regular polygons is 2 : 3 and the ratio of the sum of their interior angles is 5 : 8. What is the number of sides of the first polygon and the measure of the interior angle (in degrees) of the second polygon, respectively?
- A 8, 150
B 10, 156
C 12, 160
D 6, 140

106. The GST on groceries is reduced by 20% and its consumption increases by 15% . Find the percentage of effect on revenue.
- A -8%
B -5%
C -1%
D -2%
107. A spherical disc of radius 5 cm is placed on a horizontal surface against a vertical wall as given.

Another small disc is placed in the gap between the right angle and the disc such that the horizontal surface, vertical wall, the larger disc, and the smaller disc touch each other. What is the radius (in cm) of the smaller disc ?

- A $15 - 10\sqrt{2}$
B $15 - 10\sqrt{3}$

- A 1080
- B 1260
- C 900
- D 720

113. The present value of an ATM machine is ₹55,000. The value of the machine depreciates at the rate of 25% every year. What will be the value of the machine after two years?

- A ₹30,937.50
- B ₹37,933.50
- C ₹31,937.50
- D ₹33,937.50

114. A large container having three different vessels contains 780, 690 and 950 litres of oil and petrol, respectively. Find the largest measure among all three vessels.

- A 11 litres
- B 9 litres
- C 12 litres
- D 10 litres

115. The graph of $f(x) = x^2 - 5x + 6$ is translated 2 units left and 12 units down to get $h(x)$. Express $h(x)$ in the form $h(x) = ax^2 + bx + c$.

- A $x^2 - 9x + 32$
- B $x^2 - x + 12$
- C $x^2 - x - 12$
- D $x^2 - 9x - 8$

116. What is the domain and the vertical asymptote (VA), respectively, of $f(x) = \log_5(x - 4) - 4, x > 0$?

- A $\{x \mid x = 0\}, VA \Rightarrow x = 0$
- B $\{x \mid x > 4\}, VA \Rightarrow x = 4$
- C $\{x \mid x = 4\}, VA \Rightarrow x = 4$
- D $\{x \mid x > 0\}, VA \Rightarrow x = 0$

117. Two straight parallel lines are cut by a transversal, such that, the measures of two co-interior angles are $\frac{3x}{4}$ and $(\frac{5x}{4} - 20)$. What are the values of the measures of the two angles (in $^\circ$), respectively?

- A 115, 65
- B 75, 105
- C 105, 75
- D 65, 115

118. The length of the major axis is 12 cm and that of the minor axis is 2.8 cm. What is the area (in cm^2) of the ellipse?

- A 28.6
- B 105.6
- C 26.4
- D 108.4

119. If $(x^2 - x - 6)$ is a factor of $x^4 + ax^3 - x^2 - bx - 12 = 0$, what are the values of constants a and b, respectively, in the above equation ?

- A 4, -16
- B -4, 16
- C -4, -16
- D 4, 16

If $(x^2 - x - 6)$ is a factor of $x^4 + ax^3 - x^2 - bx - 12 = 0$, what are the values of constants a and b, respectively, in the above equation ?

A) 4, -16 B) -4, 16
C) -4, -16 D) 4, 16

Handwritten solution showing the division of $x^4 + ax^3 - x^2 - bx - 12$ by $x^2 - x - 6$. The quotient is $x^2 + 3x + 2$ and the remainder is 0. The factors are $(x-3)(x+2)$.

VIDEO SOLUTION

120. A train overtakes two persons walking along a railway bridge. The first one walks at 4 km/h and the other one walks at 6 km/h. The train needs 4.2 and 4.8 seconds, respectively, to overtake them. What is the speed of the train, if both the persons are walking in the same direction?

- A 22 km/h
- B 20 km/h
- C 26 km/h
- D 24 km/h

Reasoning and Logical Ability

121. Read the given passage and answer the question that follows.

Access to material wealth does not necessarily mean that one country is out of poverty. A strong economy in a developed nation doesn't mean much when a significant percentage (even a majority) of the population is struggling to survive.

Which of the following options most logically completes the argument?

True riddance from poverty means:

- A an improvement in living standards and access to all basic needs such as enough food, water, shelter, clothing, health, education, etc.
- B getting means to provide luxury items for once to the underprivileged
- C a boost in the economy of the country and inflow of foreign investment into the domestic market
- D a stable political and economic environment and social freedom

122. A train crosses a bridge in 30 seconds at the speed of 72 km/h. If the length of train is 250 m, then what is the length of the bridge?

- A 250 m
- B 350 m
- C 300 m
- D 400 m

123. Read the given information carefully and answer the questions that follow.

The children of Shyam colony are selecting a team to play a cricket match with Vasant colony. Varun is captain of the team of Shyam colony. He wants his team to have two batsmen, two bowlers and two wicketkeepers. Among the players Rohan, Raveena, Sonal and Animesh are batsmen Brijesh, Cynthia and Manish are bowlers. Similarly, Ruby, Bhuvan, Tiya and Yash are wicketkeepers.

Some of the other conditions are as follows:

- i) Ruby and Yash will always be selected together.
- ii) If Sonal is selected, then neither Manish nor Bhuvan can be selected.
- iii) If Raveena is selected, then Bhuvan is definitely selected.
- iv) Tiya and Yash can never be selected together.

Which of the following is a possible combination of a team?

- A Raveena, Animesh, Brijesh, Manish, Ruby, Yash
- B Sonal, Animesh, Brijesh, Cynthia, Tiya, Yash
- C Rohan, Sonal, Cynthia, Manish, Bhuvan, Tiya
- D Rohan, Raveena, Brijesh, Cynthia, Bhuvan, Tiya

124. Read the given statement and conclusions carefully. Assuming that the information given in the statement is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statement.

Statement:

Many countries around the globe have either put a ban on the plastic bag or levied tax on it. However, the problem hasn't been solved completely because the implementation of these measures hasn't been as successful.

Conclusions:

- I. Plastic bags are illegal to use or sell in many countries.
- II. The authorities are not strict enough to impose the ban on plastic bags completely.

- A Only conclusion (II) follows.
- B Either conclusion (I) or (II) follows.
- C Both conclusion (I) and (II) follows.
- D Only conclusion (I) follows.

125. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- a) All parrots are sparrows.
- b) Some eagles are vultures.
- c) All vultures are sparrows.

Conclusions:

- I. All vultures are parrots.
- II. Some parrots are eagles.
- III. Only some vultures are sparrows.

- A None of the conclusions follow.
- B Only conclusions I and II follow.
- C Only conclusions I and III follow.
- D Only conclusions II and III follow.

Select the number from among the given options that can replace the question mark(?) and complete the pattern.

- A 54
- B 48
- C 51
- D 46

127. Select the number that will come next in the following series.

113, 117, 126, 151, 200, ?

- A 275
- B 258
- C 321
- D 323

128. Ishaan is standing at a bus stop facing the East. From there he turns right and starts walking for 30 m. Then he turns left and walks 10 m. He again turns left and walk 15 m. What is the shortest distance (approximate) between Ishaan and the starting point?

- A 16 m
- B 25 m
- C 55 m
- D 18 m

129. Read the given information carefully and answer the questions that follow.

The children of Shyam colony are selecting a team to play a cricket match with Vasant colony. Varun is captain of the team of Shyam colony. He wants his team to have two batsmen, two bowlers and two wicketkeepers. Among the players Rohan, Raveena, Sonal and Animesh are batsmen Brijesh, Cynthia and Manish are bowlers. Similarly, Ruby, Bhuvan, Tiya and Yash are wicketkeepers.

Some of the other conditions are as follows:

- i) Ruby and Yash will always be selected together.
- ii) If Sonal is selected, then neither Manish nor Bhuvan can be selected.
- iii) If Raveena is selected, then Bhuvan is definitely selected.
- iv) Tiya and Yash can never be selected together.

If Raveena is selected, then who among the following will definitely NOT be selected?

- A Bhuvan
- B Manish
- C Rohan
- D Sonal

130. If it was Wednesday on 1 January 2007, then what was the day of the week on 1 January 2011?

- A Monday
- B Wednesday
- C Thursday
- D Saturday

131. Three persons Shruti, Vihaan and Vishi gave the following statements about Anu's sweater.

Shruti said, "She is either wearing red or green."

Vihaan said, "She is wearing red."

Vishi said, "She is neither wearing red nor green."

Of these three, only one person is wrong.

Which colour sweater is Anu wearing?

- A Red
- B Data insufficient
- C Green
- D Neither Red nor Green

132. Select the option that is true regarding the following two statements labelled Assertion (A) and Reason (R).

A. A stable atom has the net charge of zero.

R. When the number of electrons does not equal the number of protons, the atom is ionized.

- A A is true but R is false.
- B Both, A and R, are true but R is not the correct explanation of A.
- C A is false but R is true.
- D Both, A and R, are true and R is the correct explanation of A.

133. Three materials paper, cloth and plastic are cut into three shapes circle, triangle and square but not necessarily in the same order. Also, they are painted red, pink and green but not necessarily in this order. The paper is green and the plastic is cut in a square but is not painted pink. The circle shaped material is painted pink.

What is the shape and colour of the cloth?

- A Circle, red
- B Triangle, red
- C Circle, pink
- D Triangle, pink

134. Select the option which represents the number of black colored items that are warm but NOT bedsheets.

- A 10
B 14
C 6
D 8
135. In an examination Roma was ranked 8^{th} from the top and Arjun was ranked 9^{th} from the bottom. In the next exam their rankings were interchanged, hence Arjun became 28^{th} from the bottom. How many total students were there, if equal number of students gave both the exams?
- A 38
B 37
C 35
D 36
136. Select the option that is true regarding the following two statements labelled Assertion (A) and Reason (R).
A. A person who does hard work smartly gets the desired goals.
R. Only hard work is not enough to reach to your desired goals.
- A Both, A and R, are true and R is the correct explanation of A.
B Both, A and R, are true but R is not the correct explanation of A.
C A is true but R is false.
D A is false but R is true.

137. Harry is the husband of Eli and Sue is the sister of Christa's father and Fred is the father of Sue. Nichole is Eli's mother-in-law and Fred is the husband of Eli's husband's mother. Sue is the sister-in-law of Eli who is the only child of her parents. If Nichole has only two children, then how is Fred related to Christa?

- A Paternal grandfather

- B Maternal grandfather
- C Paternal uncle
- D Maternal uncle

138. Becca can complete a work in 12 days and Jason can complete the same work in 24 days. If they work together, then the work can be finished in how many days?

- A 12 days
- B 24 days
- C 8 days
- D 10 days

139. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- (a) All curtains are sheets.
- (b) Some sheets are shawls.
- (c) Some covers are sheets.

Conclusions:

- I. Some curtains are covers.
- II. Some shawls are covers.

- A Only conclusion (I) follows.
- B Either conclusion (I) or (II) follows.
- C Only conclusion (II) follows.
- D Neither conclusion (I) nor (II) follows.

140. Five students Leena, Poonam, Sarika, Afreen and Monisha are sitting in a row facing the North. Monisha is sitting between Sarika and Poonam. Afreen is sitting on the west end. Poonam is sitting third to the right of Afreen. Who is sitting in the middle of the row?

- A Poonam
- B Leena
- C Sarika
- D Monisha

141. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- a) All cities are villages.

b) Some states are cities.

Conclusions:

I. All states are villages.

II. Some villages are states.

III. Some villages are cities.

A Only conclusions I and III follow.

B Only conclusions I and II follow.

C Only conclusions II and III follow.

D All the three conclusions follow.

142. Sanjay started from a point facing North. He walked for 10 m and then took a left turn and again walked 10 m. Then he took a right and walked 20 m further. Next he took right and walked 20 m. He further turned right and moved 20m. In which direction is Sanjay from the starting point?

A North-west

B South-west

C South-east

D North-east

WITH DETAILED SOLUTIONS AND ANALYSIS

143. Select the Venn diagram that best represents the relationship between Shark, Oviparous and Ostrich.

144. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- A Either I or II is implicit
- B Only assumption II is implicit
- C Only assumption I is implicit
- D Both I and II are implicit

148. A clock was 5 minutes behind the actual time at 4 p.m. on Monday and 10 minutes ahead of the actual time at 2 p.m. the next Wednesday. When will it show the correct time?

- A 3:46 p.m. on Tuesday
- B Cannot be calculated
- C 7:20 a.m. on Tuesday
- D 10:17 a.m. on Tuesday

149. Eight friends are sitting around a round table facing the centre with equal distances between two neighbours. Sehaj is sitting opposite to Farhan. Aparna is second to the left of Ruchi. Only Karan is sitting between Tony and Sehaj. Ruchi is opposite to Prerna who is immediate neighbour to Farhan. Harsh is somewhere between Ruchi and Farhan. Who is sitting opposite Karan?

- A Harsh
- B Prerna
- C Ruchi
- D Aparna

150. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- (i) Some robots are machines.
- (ii) All phones are gadgets.
- (iii) All robots are gadgets.
- (iv) No phones are robots.

Conclusions:

- I. Some gadgets are machines.
- II. Some machines are phones.
- III. No phones are machines.

- A Only conclusion (II) and either (I) or (III) follows.
- B Only conclusions (I) and (II) follows.
- C Only conclusion (I) and either (II) or (III) follows.
- D Only conclusions (II) and (III) follows.

151. Select the number from among the give options that can replace the question mark(?) in the figure?

- A 1024
- B 2197
- C 2064
- D 1686

152. Lora, Bhumi and Tammy were given a work each and only one of the three completed their work. Each person was employed in one of the three different companies - Avtech, Prosys and Kygard. Avtech employees always speak the truth, Prosys employees always lie and Kygard employees tell the truth and lie, alternatively. After asking them about the work they gave these statements.

Bhumi:

Lora has completed her work.

Tammy is not a Prosys employee.

Lora:

I would have completed the work, if Tammy had not distracted me with movies.

Tammy always speaks the truth.

Tammy:

I hadn't distracted Lora with the movies.

Bhumi completed her work.

Bhumi is an employee of which company?

- A Prosys
- B Avtech
- C Kygard
- D Either Prosys or Avtech

153. Read the given passage and answer the question that follows.

India's earthen lamp makers are losing domestic sales because of lower-priced imports of cheap fancy electric lamps, which is because foreign government employs forced labour to work without any labour charges. Whatever the reason be, the cost is the means of livelihood of the domestic lamp makers and sellers. Therefore, it would not only support and protect domestic lamp makers, but also other industries sales, if our government took measures to reduce cheap material imports.

Which of the following, if true, most seriously weakens the above argument?

- A Because earthen lamps are rarely competitive in the markets, only a very small portion of revenue comes from the sales.
- B Because of advances in technology the earthen lamp are old fashioned and nobody wants to buy them.
- C The forced labour that foreign government is using do not specify any penalties for such violations.

- For many domestic industries who face severe international competition in both domestic and export markets, the cheap import of raw material from foreign government constitutes a significant part of their cost benefits.

154. Read the given statement and courses of action and decide which of the given courses of action follow(s) from the statement.

Statement:

A new strain of the virus is reported to have spread across the country.

Courses of action:

- I. People should be made aware people about the virus and implementation measures should be taken to prevent the spread.
- II. Minimise economic disruption by hiking prices and hence maintain the economy.
- III. Support coordination and the efficient use of limited resources among local, national, regional and international public health partners.

- A** Only I and II follows.
- B** Only I and III follows.
- C** All three follows.
- D** Only II and III follows.

155. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- a) All lights are wires.
- b) All wires are switches.

Conclusions:

- I. All lights are switches.
- II. Some switches are wires.

- A** Only conclusion I follows.
- B** Only conclusion II follows.
- C** Either conclusion I or II follows.
- D** Both conclusions I and II follow.

156. Consider the given statements and decide which of the given assumptions is/are implicit in the statement.

Statements:

Safety and health sectors in India are well below the quality standards as revealed by the pandemic.

Assumptions:

- I. The quality standards set for health and safety are unrealistic and non-achievable.
- II. The health and safety sectors were not considered as priority and as a sector to invest in.

- A** Either I or II is implicit
- B** Only assumption II is implicit

C Only assumption I is implicit

D Neither I nor II is implicit

157. In a class of 40 students Anuja is ranked 17th and Mihir is ranked 18th. What will be their ranks from the last, respectively?

A 23rd and 24th

B 24th and 25th

C 24th and 23rd

D 25th and 24th

158. Select the number from among the given options that can replace the question mark (?) in the following series.

323, 329, 344, ?, 456

A 385

B 421

C 405

D 379

159. Select the combination of letters that when sequentially placed in the blanks of the given series will complete the series.

s_f_sg_c_g_c_fc

A gcfsfsg

B gcfsfsc

C cgscfsg

D cgfsfsc

160. Read the given statements and conclusions carefully. Assuming that the information given in the statements is true, even if it appears to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

a) Since education is now dependent on electronic devices, homework and notes, explanation, almost everything is now accessible in our devices, which has increased the screen-time of students and teachers.

b) The increase in the screen-time is harmful for students and teachers. This has resulted in children and teachers weakening themselves.

Conclusions:

I. Online education is a necessity, but has many demerits with itself.

II. We should stop online education as it has harsh negative effects on people connected to it.

III. Online education is very helpful as everything is easily accessible.

Explanations

Verbal Ability

14. **C**

Option C is the most appropriate choice because it provides additional information that directly supports the context of the paragraph.

Throughout the paragraph, the focus is on the revival of businesses in 2021 and how companies have been investing in up-skilling and re-skilling their workforce. The missing sentence needs to complement this theme by providing more details about where these investments have been directed.

Option C does exactly that by specifying some of the sectors where these investments have increased, such as IT, e-commerce, pharma, and EdTech. By mentioning these sectors, it gives a clearer picture of where the up-skilling efforts have been concentrated, highlighting areas of growth and importance in the business landscape during the specified time period.

Therefore, Option C serves to enhance the coherence and relevance of the paragraph by providing specific examples that align with its central theme.

28. **C**

Going through the sentences, we can see that C sets the context of the discussed event.

A and D would make a good chronological pair; the ostrich and emu fell into the pit (A), and then they tried to jump out of the pit but could not as it was too deep (D)

B serves as the conclusion of the paragraph, as after the ostrich and emu were trapped in the pit, their squawking brought other animals to the pit.

CADB is the sequence in these sentences that should be arranged in order to make a logically coherent paragraph.

Therefore, option C is the correct answer.

34. **A**

Statements B, C, and D talk about how attendance in India has increased overall, with B providing a good introduction to the topic and D expanding the discussion to include even the rural areas.

Statement A, on the other hand, talks about how teacher attendance is low. This not only introduces the context of teachers being considered in terms of attendance but also goes against the general theme of attendance records improving.

Hence, Statement A is out of context among the given sentences.

Therefore, Option A is the correct answer.

35. **C**

Statement B sets the passage's context: an English passenger drawing someone into a conversation.

The natural follow-up to this is statement D, which clarifies what conversation is being talked about here.

At this point, we can mark option C as our answer, but it is always good to look at the complete sequence and see if it is logically coherent. From D, we go to A, which mentions one more thing the Englishman brought up during his conversation; after which comes statement C, which continues with the responses to the previous question posed by the Englishman.

BDAC is a logically coherent sequence

Therefore, Option C is the correct answer.

36. **D**

To solve this analogy, we need to understand the relationship between "shrug" and "indifference."

A shrug is a gesture that typically expresses indifference.

We need to find a pair where the first word is a gesture that typically expresses the second word.

Let's analyze the options:

A wave : fatigue - A wave is a gesture that does not typically express fatigue.

B blink : scorn - A blink is an involuntary action, not a gesture expressing scorn.

C scowl : desire - A scowl is a facial expression that typically expresses anger or displeasure, not desire.

D nod : assent - A nod is a gesture that typically expresses assent (agreement or approval).

Hence, only the relationship in option D matches the relationship in the given pair: a gesture expressing a specific feeling or state.

Therefore, option D is the correct answer.

37. **D**

The phrase "good classroom strategies encourage" should be "good classroom strategies that encourage" or "good classroom strategies to encourage"

Hence, this part of the sentence is incorrect and therefore, Option D is the correct answer.

38. **A**

Option A: "for which she has applied"; this option correctly uses "for which" to refer back to the secretarial job. It indicates that she has applied for the job. The preposition "for" is necessary here to indicate the action of applying for something.

Option B: "which she has read" The phrase "which she has read" suggests she simply read the advertisement but does not imply any further action.

Option C: "That she bought." this option is incorrect because it does not make sense in the context of a job advertisement. You cannot buy a job.

Option D: "for which she has written." this option could make sense in a different context, such as if she wrote the job advertisement herself. However, it does not fit the common scenario where someone applies for a job. The typical and expected action related to a job advertisement is applying, not writing the advertisement.

Overall, A would be a better fit over D

Therefore, Option A is the correct answer.

40. **C**

Option A: drop off means to take someone or something to a particular place, usually by car, as you travel to a different place

Option B: drop by means to pay a brief, casual visit

Option C: drop out means to withdraw from participation or membership

Option D: Drop-in means to come for a visit, especially without having received an invitation for a specific time

Of all the given options, only option C fits in the context of the sentence, implying that every year, some boys, stop their participation or leave in the middle of the course.

Therefore, Option C is the correct answer.

Data Interpretation

42. **D**

The number of gold medals won by B, D, E = $14+10+12=36$.

Now calculate the bronze medals won by C and F.

Bronze medals won by C:

$$16+6x+7x=42$$

$$13x=26$$

$$x=2$$

$$7x=14$$

Bronze medals won by F :

$$13+5y+6y=46$$

$$11y=33$$

$$y=3$$

$$6y=18$$

Bronze medals won by C and F=14+18=32

The percentage by which 36 is more than 32.

$$\frac{(36-32)}{32} \cdot 100 = 12.5\%$$

45. A

It is given that 1800 students are studying five different courses -A, B, C, D and E.

The number of male students is $57\frac{1}{7}\%$ more than that of female students.

Let number of female students be $100x$, thus number of male students will be $100x + (400/7)x = 1100/7x$

Total students = 1800

$$100x + 1100x/7 = 1800$$

$$1800x/7 = 1800$$

$$x = 7$$

Thus, number of female students = 700 and number of male students = 1100

It is given that Out of male total students, 24% are studying course B = 24% of 1100 = 264

the ratio of the number of female students to male students studying this course is 5:6.

Number of female students studying course B = $(264/6)*5 = 220$

Total students studying course B = 264+220 = 484

It is given that the total number of students studying course C is 342, out of which female students are 104.

Hence, number of male students = 342 - 104 = 238

It is given that 18% of females are studying course A = 18% of 700 = 126

Also, the ratio of male students to female students studying A is 4:3.

Hence, the number of male students = $(126/3)*4 = 168$

Total students studying A = 168+126 = 294

It is also given that One-fifth of total males are studying course D = 20% of 1100 = 220

Also, the number of female students studying D is 25% less than that of males studying D = $220*0.75 = 165$

Total number of students studying D = 165+ 220 = 385

Therefore, we make a table from the above information-

Course	Male Students	Female Students	Total
A	168	126	294
B	264	220	484
C	238	104	342
D	220	165	385
E	210	85	295
Total	1100	700	1800

The average number of female students studying courses A, B and C = $(126+220+104)/3 = 150$

The total number of male students studying courses D and E = $220+210 = 450$

The average number of female students studying courses A, B and C is approximately what per cent less than the total number of male students studying courses D and E = $(300/450)*100 = 66.66\%$ (Approx)

Option A is the correct answer.

46. C

It is given that 1800 students are studying five different courses -A, B, C, D and E.

The number of male students is $57\frac{1}{7}\%$ more than that of female students.

Let number of female students be $100x$, thus number of male students will be $100x + (400/7)x = 1100x/7$

Total students = 1800

$100x + 1100x/7 = 1800$

$1800x/7 = 1800$

$x = 7$

Thus, number of female students = 700 and number of male students = 1100

It is given that Out of male total students, 24% are studying course B = 24% of 1100 = 264

the ratio of the number of female students to male students studying this course is 5:6.

Number of female students studying course B = $(264/6)*5 = 220$

Total students studying course B = $264+220 = 484$

It is given that the total number of students studying course C is 342, out of which female students are 104. Hence, number of male students = $342 - 104 = 238$

It is given that 18% of females are studying course A = 18% of 700 = 126

Also, the ratio of male students to female students studying A is 4:3.

Hence, the number of male students = $(126/3)*4 = 168$

Total students studying A = $168+126 = 294$

It is also given that One-fifth of total males are studying course D = 20% of 1100 = 220

Also, the number of female students studying D is 25% less than that of males studying D = $220*0.75 = 165$

Total number of students studying D = $165+ 220 = 385$

Therefore, we make a table from the above information-

Course	Male Students	Female Students	Total
A	168	126	294
B	264	220	484
C	238	104	342
D	220	165	385
E	210	85	295
Total	1100	700	1800

Number of male students studying course B = 264

Number of female students studying course D = 165

The ratio of the number of male students studying course B to that of female students studying course D = $264:165 = 88:55 = 8:5$

47. C

It is given that 1800 students are studying five different courses -A, B, C, D and E.

The number of male students is $57\frac{1}{7}\%$ more than that of female students.

Let number of female students be $100x$, thus number of male students will be $100x + (400/7)x = 1100/7x$

Total students = 1800

$100x + 1100x/7 = 1800$

$1800x/7 = 1800$

$x = 7$

Thus, number of female students = 700 and number of male students = 1100

It is given that Out of male total students, 24% are studying course B = 24% of 1100 = 264

the ratio of the number of female students to male students studying this course is 5:6.

Number of female students studying course B = $(264/6)*5 = 220$

Total students studying course B = $264 + 220 = 484$

It is given that the total number of students studying course C is 342, out of which female students are 104.

Hence, number of male students = $342 - 104 = 238$

It is given that 18% of females are studying course A = 18% of 700 = 126

Also, the ratio of male students to female students studying A is 4:3.

Hence, the number of male students = $(126/3)*4 = 168$

Total students studying A = $168 + 126 = 294$

It is also given that One-fifth of total males are studying course D = 20% of 1100 = 220

Also, the number of female students studying D is 25% less than that of males studying D = $220*0.75 = 165$

Total number of students studying D = $165 + 220 = 385$

Therefore, we make a table from the above information-

Course	Male Students	Female Students	Total
A	168	126	294
B	264	220	484
C	238	104	342
D	220	165	385
E	210	85	295
Total	1100	700	1800

The number of male students studying course A is what per cent of the total number of students studying course D (correct to one decimal place)?

The number of male students studying course A = 168

The total number of students studying course D = 385

The number of male students studying course A is per cent of the total number of students studying course D = $(168/385)*100 = 43.6\%$

Option C is the correct answer.

48. **C**

It is giving that 1800 students are studying five different courses -A, B, C, D and E.

The number of male students is $57\frac{1}{7}\%$ more than that of female students.

Let number of female students be $100x$, thus number of male students will be $100x + (400/7)x = 1100/7x$

Total students = 1800

$100x + 1100x/7 = 1800$

$1800x/7 = 1800$

$x = 7$

Thus, number of female students = 700 and number of male students = 1100

It is given that Out of male total students, 24% are studying course B = 24% of 1100 = 264

the ratio of the number of female students to male students studying this course is 5:6.

Number of female students studying course B = $(264/6)*5 = 220$

Total students studying course B = $264 + 220 = 484$

It is given that the total number of students studying course C is 342, out of which female students are 104.

Hence, number of male students = $342 - 104 = 238$

It is given that 18% of females are studying course A = 18% of 700 = 126

Also, the ratio of male students to female students studying A is 4:3.

Hence, the number of male students = $(126/3)*4 = 168$

Total students studying A = $168 + 126 = 294$

It is also given that One-fifth of total males are studying course D = 20% of 1100 = 220

Also, the number of female students studying D is 25% less than that of males studying D = $220*0.75 = 165$

Total number of students studying D = $165 + 220 = 385$

Therefore, we make a table from the above information-

Course	Male Students	Female Students	Total
A	168	126	294
B	264	220	484
C	238	104	342
D	220	165	385
E	210	85	295
Total	1100	700	1800

The difference between the number of male and two times the female students studying course E is x

$\Rightarrow 210 - 2*85 = x$

$\Rightarrow 210 - 170 = x$

$\Rightarrow x = 40$

Option C is correct answer.

49. **B**

Imports in 2015, 17, and 19 is 520, 400, 480. Exports in 2014, 15, and 17 are 300, 240, 360.

Imports = $520 + 400 + 480 = 1400$

Exports = $300 + 240 + 360 = 900$

$1400:900 = 14:9$

 VIDEO SOLUTION

50. **C**

We need to find the difference between imports and exports as a percentage of Imports for each year:

2014: Difference = 120

Percentage = $(120/420) \times 100 = 28.57\%$

2015: Difference = 280

Percentage = $(280/520) \times 100 = 53.84\%$

2016: Difference = 150

Percentage = $(150/430) \times 100 = 34.88\%$

2017: Difference = 40

Percentage = $(40/400) \times 100 = 10\%$

2018: Difference = 130

Percentage = $(130/450) \times 100 = 28.89\%$

2019: Difference = 80

Percentage = $(80/480) \times 100 = 16.67\%$

So the change in percentage for 2014 and 2018 is between 25% to 30%.

 VIDEO SOLUTION

SRCC GBO Cracku's WhatsApp Group

Join Now

51. **C**

Percentage changes (2017 to 2018)

Imports: From 400 to 450

Increase = $50/400 = 12.5\%$

Exports :From 360 to 320

Decrease = $40/360 = 11.11\%$

Exports in 2020

2019 value = 400

Decrease by 11.11%

$400 \times (1 - 0.1111) = 355.6$

Imports in 2020

2019 value = 480

Increase by 12.5%

$$480 \times 1.125 = 540$$

$$\text{Difference} = 540 - 355.6 = 184.4$$

The percentage by which exports were less than imports (2020)

$$(184.4/540) \times 100 = 34.2\%$$

 VIDEO SOLUTION

52. **A**

average exports (per year) in 2015, 2018 and 2019 : $(240+320+400)/3 = 320$

Imports in 2018: 450

$$\text{Difference} = 130$$

$$\text{Difference percentage} = (130/450) \times 100 = 28.9\%$$

 VIDEO SOLUTION

53. **C**

It is given that total expenditure in January = ₹54,000

And, the expenditure in December is 20% more than that in January = 20% of 54000 + 54000 = ₹ 64800

Expenditure on items A,B,C,D,E and F in January

$$A = 20\% \text{ of } 54000 = 10800$$

$$B = 15\% \text{ of } 54000 = 8100$$

$$C = 18\% \text{ of } 54000 = 9720$$

$$D = 25\% \text{ of } 54000 = 13500$$

$$E = 12\% \text{ of } 54000 = 6480$$

$$F = 10\% \text{ of } 54000 = 5400$$

Similarly, Expenditure on items A,B,C,D,E and F In December.

$$A = 18\% \text{ of } 64800 = 11664$$

$$B = 12\% \text{ of } 64800 = 7776$$

$$C = 16\% \text{ of } 64800 = 10368$$

$$D = 21\% \text{ of } 64800 = 13608$$

$$E = 20\% \text{ of } 64800 = 12960$$

$$F = 13\% \text{ of } 64800 = 8424$$

The question is "The expenditure on item D in December is ₹108 more than the total expenditure in January over items:"

The expenditure on item D in December is = 13608

Option A) Expenditure of item C and E in January = $9720 + 6480 > 13608$

Option B) Expenditure of item B and C in January = $8100 + 9720 > 13608$

Option C) Expenditure of item B and F in January = $8100 + 5400 = 13500$

Thus, we can see that The expenditure on item D in December is ₹108 more than the total expenditure in January.

Hence, Option C is the correct answer.

54. **D**

It is given that total expenditure in January = ₹54,000

And, the expenditure in December is 20% more than that in January = $20\% \text{ of } 54000 + 54000 = ₹ 64800$

Expenditure on items A,B,C,D,E and F in January

A = $20\% \text{ of } 54000 = 10800$

B = $15\% \text{ of } 54000 = 8100$

C = $18\% \text{ of } 54000 = 9720$

D = $25\% \text{ of } 54000 = 13500$

E = $12\% \text{ of } 54000 = 6480$

F = $10\% \text{ of } 54000 = 5400$

Similarly, Expenditure on items A,B,C,D,E and F In December.

A = $18\% \text{ of } 64800 = 11664$

B = $12\% \text{ of } 64800 = 7776$

C = $16\% \text{ of } 64800 = 10368$

D = $21\% \text{ of } 64800 = 13608$

E = $20\% \text{ of } 64800 = 12960$

F = $13\% \text{ of } 64800 = 8424$

The average expenditure on items A, C and D together in January is what per cent less than the expenditure on item E in December?

The average expenditure on items A, C and D together in January is = $(10800+9720+13500)/3 = 11340$

The expenditure on item E in December = 12960

It is less by $[(12960 - 11340)/12960] \times 100 = 12.5\%$

Option D is the correct answer.

55. B

It is given that total expenditure in January = ₹54,000

And, the expenditure in December is 20% more than that in January = $20\% \text{ of } 54000 + 54000 = ₹ 64800$

Expenditure on items A,B,C,D,E and F in January

A = $20\% \text{ of } 54000 = 10800$

B = $15\% \text{ of } 54000 = 8100$

C = $18\% \text{ of } 54000 = 9720$

D = $25\% \text{ of } 54000 = 13500$

E = $12\% \text{ of } 54000 = 6480$

F = $10\% \text{ of } 54000 = 5400$

Similarly, Expenditure on items A,B,C,D,E and F In December.

A = $18\% \text{ of } 64800 = 11664$

B = $12\% \text{ of } 64800 = 7776$

C = $16\% \text{ of } 64800 = 10368$

D = $21\% \text{ of } 64800 = 13608$

E = $20\% \text{ of } 64800 = 12960$

F = $13\% \text{ of } 64800 = 8424$

It is given that in January the income of the family is 20% more than the total expenditure.

Thus, income in January = $1.2 \times 54000 = 64800$

Savings in January = $64800 - 54000 = 10800$

It is also given that in December the income of the family is 15% more than the expenditure.

Thus, the income in December = $1.15 \times 64800 = 74520$

Savings in December = $74520 - 64800 = 9720$

The savings in January are more than that in December by = $10800 - 9720 = 1080$

$\Rightarrow [(1080)/9720] \times 100 = 11.11\%$

Approx 11% (Option B is the correct answer)

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

Explanation [65 - 68]:

The following points are given in the question.

i) The total units of all these products produced by X and Y together are 5500, and company Y produces 20% more units than company X.

Let x be the number of products from company X. Then the number of products from company Y will be $x + \frac{20}{100}x = 1.2x$

$$x + 1.2x = 2.2x = 5500$$

$$\Rightarrow x = 2500$$

The number of products from company x is 2500, and that from y is $1.2 \times 2500 = 3000$

ii) Out of the total units of the products produced by company Y, 12% are of product B, and company X produces 30% more units of B than Y.

Given that 12% of Y products are B.

12% of 3000 = 360. Company Y produces 360 products of type B.

company X produces 30% more units of B than Y.

Company X produces 468 products of type B.

iii) The ratio of the units of product A produced by companies X and Y is 5: 6, and the total number of units of A is 990.

Let's say the constant proportionality of the given ratio is k . $5k + 6k = 11k = 990$.

$$\Rightarrow k = 90$$

Company X produces 450 products of type A, and Company Y produces 540 products of type A.

iv) The number of units of product D produced by company X is 650, and company Y produces 40% more of it.

The number of units of product D produced by company X is 650.

Company Y produces 40% more than company X. That will be 910.

v) company X produces 550 units of C, and Company Y produces 55 more.

Company X produces 550 units of C. And Company Y produces 605(55 more).

vi) The units of the products left with companies X and Y are of product E.

The product left for company X is 382, and that for company Y is 585.

	Company X	Company Y
A	450	540
B	468	360
C	550	605
D	650	910
E	382	585
Total	2500	3000

65. **A**

The number of units of product C produced by company Y is 605.

The number of units of product B and E produced by company X is $468 + 382 = 850$

605 is what percent of 850?

$$\frac{605}{850} \times 100 = 71.2$$

66. **C**

The number of units of product B produced by company X is 468.

The number of units of product E produced by company Y is 585.

The ratio is $468:585 = 4:5$

67. **A**

>The number of units of product A produced by company X is 450.

40% of the number of units of products D produced by company Y is $\frac{40}{100} \times 910 = 364$

$$450 - 364 = 86$$

So, k is 86.

68. **B**

The product left for company X is 382, and that for company Y is 585.

	Company X	Company Y
A	450	540
B	468	360
C	550	605
D	650	910
E	382	585
Total	2500	3000

The average number of units of products A, B and E produced by company Y is $\frac{(540+360+585)}{3} = 495$

The average number of units of products C and D produced by company X is $\frac{(550+650)}{2} = 600$

The average number of units of products A, B and E produced by company Y is 105 less than the average number of units of products C and D produced by company X.

$$\text{That is } \frac{105}{600} \times 100 = 17.5\%$$

73. **D**

It is given in the question that Profit percent = $\frac{\text{Income} - \text{Expenditure}}{\text{Expenditure}} \times 100$.

That means profit is calculated as a percent of expenditure.

$$\text{Income} = \text{Expenditure} + \frac{\text{profit percent} \times \text{Expenditure}}{100}$$

Let 'e' be the expenditure company A in 2019.

The profit percentage of company A is 55, and B's is 40.

The income of company A in 2019 = Expenditure + $\frac{\text{profit percent} * \text{Expenditure}}{100} = e + \frac{55 * e}{100} = 1.55e$

The income of company B in 2019 = Expenditure + $\frac{\text{profit percent} * \text{Expenditure}}{100} = e + \frac{40 * e}{100} = 1.4e$

The total income of companies A and B in 2019 is $1.55e + 1.4e = 2.95e$.

Given that the total income of both companies was ₹354 crores.

So, $2.95e = 354$

$\Rightarrow e = 120$.

Then the total expenditure (in ₹ crores) of A and B in 2019 is $2e = 2 * 120 = 240$

74. C

It is given in the question that Profit percent = $\frac{\text{Income} - \text{Expenditure}}{\text{Expenditure}} \times 100$.

That means profit is calculated as a percent of expenditure.

Income = Expenditure + $\frac{\text{profit percent} * \text{Expenditure}}{100}$

The question shows that the expenditure for company B in 2016 was ₹240 cr.

From the graph, the profit percent for company B in 2016 is 45.

Income for company B in 2016 = expenditure + $\frac{\text{profit percent} * \text{Expenditure}}{100} = 240 + \frac{45 * 240}{100} = ₹348$ cr.

The income for company B in 2020 is also equal to ₹348 cr.

From the graph, the profit percent for company B in 2020 is 60.

Let's assume the expenditure of company B in 2020 is e.

Income for company B in 2020 = expenditure + $\frac{\text{profit percent} * \text{Expenditure}}{100}$

$348 = e + \frac{60 * e}{100} = 1.6e$

$e = \frac{348}{1.6} = 217.5$

77. C

A total of 225 students passed from School Y in the year 2017.

We are given that among these students, the boys and girls are in the ratio of 7:8

This would give us the girls passing from school Y in 2017 to be $\frac{225}{15} \times 8 = 120$, and the boys passing from school Y in 2017 to be $\frac{225}{15} \times 7 = 105$

Next, we are given the ratio of boys and girls that passed from school X in the year 2019 as 12:13

The total number of students that passed from X in 2019 is 280; this would give us the number of boys and girls passing in that year to be $\frac{275}{25} \times 12 = 132$ and $\frac{275}{25} \times 13 = 143$ respectively.

The total number of girls passing from X and Y would be: $120 + 143 = 263$

We are given that in 2020, 80% of the students who appeared were girls, giving us this value to be $\frac{80}{100} \times 400 = 320$

We are asked how many percentages is 263 less than 320; this value would be $\frac{320 - 263}{320} \times 100 = 17.81\%$

Therefore, Option C is the correct answer.

78. A

for this question, we only have to consider the data from School Z

We need to subtract the number of students who passed from the number of students who appeared for each year and see in which year is that value at the second lowest rank.

2016: $300 - 285 = 15$

$$2017: 320-304 = 16$$

$$2018: 380-362 = 18$$

$$2019: 352-325 = 27$$

$$2020: 400-381 = 19$$

If we rank the years in the increasing order of their differences:

2016(15), 2017 (16), 2018 (18), 2020(19), 2019 (27)

We see that the year with the second-lowest difference is 2017

Therefore, Option A is the correct answer.

79. **A**

For this question, we would have to find the total number of students that passed from school Y

The number of students that passed from school Y: $175+225+254+280+276 = 1210$

The average number of students that passed from Y would be $1210/5 = 242$

The average number of students that passed from all three schools combined in 2018 would be

$$\frac{242+254+362}{3} = \frac{858}{3} = 286$$

Giving us the ratio to be 242 : 286

11 : 13

Therefore, Option A is the correct answer.

80. **D**

The total number of students that appeared from school X in 2016, 2017 and 2019 are $250+275+300 = 825$

The number of students that passed from School Y in 2018 and 2020 is $254+276 = 530$

The difference between the two is $825-530 = 295$

We need to find the percentage of this value compared to the total number of students who passed from school Y in 2018 and 2020, giving the answer to be $\frac{295}{530} \times 100 \approx 55.66\%$

This is closest to option D, which shows a value of 55.7%

Therefore, Option D is the correct answer.

Quantitative Ability

81. **A**

Since $(x^2 + \frac{1}{x^2}) = 8.25$, we can rewrite the same as $(x - \frac{1}{x})^2 + 2x \times \frac{1}{x} = 8.25$

This gives us $(x - \frac{1}{x})^2 = 6.25$

Or, $(x - \frac{1}{x}) = 2.5$

Now, $(x)^3 - (\frac{1}{x})^3 =$

On substituting the values, we get the answer as 30.625

82. **A**

Since x is inversely proportional to $(2y^2 - 5)$, we get the equation as $x = \frac{k}{2y^2 - 5}$ where k is the proportionality constant.

Now, $x = 25$ when $y = 15$. Putting this in the above equation, we get the value of k as 11,125.

When $y = 10$, $x = \frac{11125}{200-5}$, which is approximately equal to 57.

83. **C**

$$g(x) = x^4$$

Now, $fog(x)$ is $x^4 + 7$, which is Option C.

84. **C**

The summation of 10 steps, 11 steps, and 20 steps is 41 steps.

85. **C**

The section formula to find the point dividing the line is $\frac{na+mb}{n+m}$ where the ratio is n:m and the coordinates (x or y axis) are a and b.

Applying the same for x-coordinate: $\frac{44}{8}$, which is equal 5.5

For y-coordinate: $\frac{56}{8}$ which is 7.

Hence, the point is (5.5, 7)

86. **B**

Since the different combinations (both selection and placement) would produce different signals, we need to consider each case.

Case 1: When only 1 light is used

Here, we need to select and arrange 1 light out of seven. It can be done in 7 ways. However, two produce signals, we need at least two lights. Hence, we shall discard this case.

Case 2: When 2 lights are used

This can be done by selecting two lights out of seven and then arranging them, which is ${}^7C_2 \times 2!$, which is 49 ways

Case 3: When 3 lights are used

This can be done by selecting three lights out of seven and then arranging them, which is ${}^7C_3 \times 3!$, which is 210 ways

Case 4: When 4 lights are used

This can be done by selecting four lights out of seven and then arranging them, which is ${}^7C_4 \times 4!$, which is 840 ways

Case 5: When 5 lights are used

This can be done by selecting five lights out of seven and then arranging them, which is ${}^7C_5 \times 5!$, which is 2520 ways

Case 6: When 6 lights are used

This can be done by selecting 6 lights out of seven and then arranging them, which is ${}^7C_6 \times 6!$, which is 5040 ways

Case 7: When 7 lights are used

This can be done by selecting 7 lights out of seven and then arranging them, which is ${}^7C_7 \times 7!$, which is 5040 ways

Adding Case 2 till Case 7, we get the answer as 13,699

87. **B**

Let the ratio in which the two varieties are mixed be a:b

$$\text{Hence, } \frac{40a+50b}{a+b} = 43$$

$$40a + 50b = 43a + 43b$$

This gives us $7b = 3a$ or $a:b = 7:3$

The option has an error; this happened in the actual exam paper, so we can't change it.

 VIDEO SOLUTION

89. **B**

Since the reduction is ₹250, which is 5% of the total bill amount.

Hence, the total due amount is x , whose 5% is ₹250.

This gives us: 5% of x is ₹250, which makes x as 5% is ₹5,000

90. **A**

In 8 litres of A, the quantity of petrol (40% of the total quantity) is 3.2 litres and that of kerosene is 4.8 litres.

In 12 litres of B, the quantity of petrol (60% of the total quantity) is 7.2 litres and that of kerosene 4.8 litres.

In the final mixture, the quantity of petrol becomes 10.4 litres and that of kerosene becomes 9.6 litres, making the ratio as 13:12.

91. **B**

$$6^{15} + 6^{16} + 6^{17} + 6^{18}$$

Let's take 6^{15} common from the whole.

We get $6^{15}(1+6+6^2+6^3)$.

6^{15} can be written as $2^{15} \times 3^{15}$.

24 can be written as $2^3 \times 3$.

So, 6^{15} is divisible by 24. Hence, the remainder is zero.

Join Now

92. **C**

The volume of a cube is s^3 , where s is the edge measure.

Hence, the volume of the three cubes is: 125 cub.cm, 343 cub.cm, and 729 cub.cm

When melted, the total volume is 1,197 cub.cm.

To find the cube's edge with the volume of 1,197 cub.cm, we shall find the cube root of this number, which happens to be 10.62 cm (approximately).

93. **D**

Since $\beta = 5\alpha$, we can say that the product of roots ($5\alpha^2$) = $\frac{c}{a}$ (1)

and sum of roots (6α) = $\frac{-b}{a}$ (2)

Hence, $\alpha = \frac{-b}{6a}$ (3)

Substituting (3) in (1), we get $5 \times \frac{b^2}{a^2} = \frac{c}{a}$

or, $5b^2 = 36ac$

94. **D**

Probability of at least 3 bottles being safe = Probability of at least 3 bottles being safe + Probability of all 4 bottles being safe

To find Probability of all 4 bottles being safe, we also need to multiply the result with 4, since any of the four bottles can be damaged.

Also, probability of a bottle being damaged is $\frac{9}{10}$

Hence, Probability of at least 3 bottles being safe = $\left(\frac{8}{9}\right)^4 + 4 \times \left(\frac{8}{9}\right)^3 \times \left(\frac{1}{9}\right)$

On solving this, we get the answer as $\frac{2048}{2187}$

95. **D**

The common difference of $[p_n]$ is 2, while that of $[qn]$ is 3.

The last term for $[p_n]$ will be $4 + 49 \times 2$, which is 102

Similarly, the last term for $[qn]$ will be $2 + 49 \times 3$, which is 149

Now, the first common term for these two series is 8. Further, the common difference for the series of common terms shall be the LCM (2,3), which is 6.

Hence, $8 + 6K < 102$

Or, $K < 15.666\dots$

This means K can take the maximum value of 15 and minimum of 0. Hence, 16 terms are common to the two series.

96. **B**

In this question, we need to assume two cases for the sign of the denominator because of the inequality.

Case 1: $2x-1 > 0$, or $x > \frac{1}{2}$

This makes $x+1 > 2x-1$, or $x < 2$

Hence, the range is $\frac{1}{2} < x < 2$

Case 2: $2x-1 < 0$, or $x < \frac{1}{2}$

This makes $x+1 < 2x-1$, or $x > \frac{1}{2}$

This case is inconsistent in nature. Hence, the answer is $\frac{1}{2} < x < 2$

WITH DETAILED SOLUTIONS AND ANALYSIS

97. **B**

$\angle A + \angle B + \angle C = 180$

Or, $\angle B + \angle C = 126$

Now, the angle bisectors divide $\angle B$ and $\angle C$ into half, hence their sum is 63

Now, in $\triangle BOC$, we $63 + \angle BOC = 180$, or $\angle BOC = 117^\circ$

98. **B**

=> Avinash invested ₹6,400 in three business at 3%, 5% and 7% per year with simple interest.

Simple interest formula is $SI = \frac{PRT}{100}$

Where P is principal, R is rate of interest and T is time duration in years

Here, Let us assume the amount invested in three businesses is P1, P2 and P3.

Therefore, the interest after 1 year because of simple interest will be $3P1/100$, $5P2/100$ and $7P3/100$

These are equal, Hence

=> $3P1 = 5P2 = 7P3$

It is also known that total investment done in three business is equal to 6400

$P1 + P2 + P3 = 6400$

Substituting values of P2 and P3 in terms of P1

$$P1 + 3P1/5 + 3P1/7 = 6400$$

We need to calculate the value of P1

$$(35+21+15)P1/35 = 6400$$

$$\Rightarrow 71P1/35 = 6400$$

$\Rightarrow$ P1 is approximately 3200 (Option B is correct answer)

99. **D**

To divide $(21^{13} + 29^{13})$ by 25, we shall divide 21 and 29 individually by 25.

By doing so, we get the remainder as $(4^{13} + (-4)^{13})$, which is 0.

100. **C**

First, we shall consider the series as a summation of two infinite series:

$$S1: \frac{1}{5} + \frac{1}{25} + \dots$$

$$S2: \frac{3}{25} + \frac{3}{625} + \dots$$

Taking S1: The sum of series shall be $\frac{a}{1-r}$, hence $\frac{\frac{1}{5}}{1-\frac{1}{25}}$, which is $\frac{25}{120}$

Taking S2: The sum of series shall be $\frac{a}{1-r}$, hence $\frac{\frac{3}{25}}{1-\frac{1}{25}}$, which is $\frac{1}{8}$

Adding S1 and S2, we get the answer as $\frac{1}{3}$

101. **B**

Let the number subtracted be x. Hence, the terms are 8-x, 10-x, and 14-x.

$$10-x = \frac{2(8-x)(14-x)}{8-x+14-x}$$

On cross multiplying, we get x as -2.

102. **B**

The population after 3 years will be: $10,000 \times 1.1 \times 1.15 \times 0.95$, which is equal to 12,018 (approximately).

103. **A**

The above expression can be simplified as $\log \frac{27}{125} \times \frac{21}{x} \times \frac{625}{81} = 0$

On solving the same, we get $\log \frac{35}{x} = 0$, for which x shall be 35, making $\log 1 = 0$

104. **D**

Let the total number of people be X.

1) When X is divided by 15, we get a remainder of 10. Hence, $X = 15a + 10$

2) When X is divided by 20, we get a remainder of 15. Hence, $X = 20b + 15$

3) When X is divided by 24, we get a remainder of 19. Hence, $X = 24c + 19$

4) When X is divided by 28, we get a remainder of 23. Hence, $X = 28d + 23$

This is a classic case when the difference between the divisor and remainder is the same, which is 5 in this case. In such instances, the number is expressed as $(\text{LCM of the divisors}) \times K - (\text{difference between the divisors and remainders})$.

Hence, the number of people shall be $840k - 5$.

The minimum number is when $k=1$, hence the minimum number shall be 835.

105. **C**

Let the sides of the polygons be $2x$ and $3x$.

Hence, the ratio of the sum of interior angles for the two polygons is: $\frac{(2x-2) \times 180}{(3x-2) \times 180} = \frac{5}{8}$

On solving this, $x=6$

This increases the number of sides in the first polygon to 12 and 18 for the second one.

To find the measure of each interior angle of the second polygon, we get $\frac{(18-2) \times 180}{18}$, which is 160 degrees.

106. **A**

Revenue is the product of spending and consumption. Hence, this is a case of successive percentage change.

The multiplying factor of reduction of 20% is 0.8, while that of increase by 15% is 1.15.

Assuming the initial revenue be X , we get the new revenue as $X \times 1.15 \times 0.80$, which is $0.92X$.

This means there is a reduction of 8% in the revenue.

107. **A**

The radius of the bigger circle is 5 cm while of the smaller circle is r cm.

Since the two sides of the wall are tangential to the circles, we get a square formed by the radius of the bigger circle and the two sides wall, each with the length of 5 cm.

Now, the diagonal of this square (s_1) shall be $5\sqrt{2}$.

Focusing on the smaller circle, on which the wall is tangential again. We get a square here as well, the diagonal of which is $r\sqrt{2}$.

Hence, the diagonal of s_1 : $5\sqrt{2} = r + r\sqrt{2} + 5$

On solving this, we get $r = 15 - 10\sqrt{2}$

108. **D**

Let us assume the number be ' x '.

Also, let us assume that the divisor is ' n '

Hence, $x = n(a) + 20$, where ' a ' is the quotient (1)

Also, $3x = n(b) + 7$, where ' b ' is the quotient (2)

Dividing (2) by (1), we get $n(b-3a) = 53$

Now, 53 is a prime number, and it can be broken into 53×1 .

Further, it is clear that the divisor cannot be 1, hence $n = 53$

109. **A**

In this scenario, the ant has three options:

- 1) Go to C directly from A, for which it has 3 paths.
- 2) Use the path A-B-C, for which it has 5×4 , which is 20 paths.
- 3) Use the path A-E-D-C, for which it has $3 \times 5 \times 6$, or 90 paths.

Adding the above numbers, we get 113 as the total number of ways in which the ant can reach C from A.

110. **A**

Let the number be $5x$.

As per the question, $2x = x+5$, or $x = 5$.

Hence, $5x = 25$

111.A

The total sum of heights of 30 students was 30×165 , which is 4950 cm.

Now, 5 students with an average height of 172 cm joined the class, which makes the total height as $860+4950=5810$ cm.

The average height of the 35 students now will be $\frac{5810}{35} = 166$ cm.

112.C

In any star-shaped figure, the sum of vertex angles is $180 \times (n-4)$, where n is the number of vertices.

Hence, in this case, it has to be $180 \times (5)$, which is 900°

113.A

The multiplying factor for a decrease of 25% is 0.75

Hence, the value of the ATM machine after two years shall be $55,000 \times 0.75 \times 0.75$, which is 30,937.5

114.D

In this question, we shall find the HCF of the three numbers 780, 690, and 950, which shall match with the options.

It is clear that 10 shall be the answer, which can be used to measure all the three different volumes.

115.C

When $f(x)$ is shifted 2 units to left, it becomes $f(x-2)$. Now, 12 units downwards would mean $f(x-2) - 12$

Hence, the new equation $h(x)$ is $(x-2)^2 - 5(x-2) + 6 - 12$, which is $x^2 - x - 12$

116.B

For $f(x) = \log_5(x-4) - 4$, $x > 0$ to be valid, $(x-4)$ has to be greater than 0. Hence, $x > 4$

Now, the VA is a line that guides the graph (above which the graph is valid and below which it becomes invalid). Hence, it has to be the line $x=4$, as $x>4$ for the graph to be valid.

117.B

The sum of two co-interior angles in the same side shall add up to 180° .

Hence, $\frac{3x}{4} + (\frac{5x}{4} - 20) = 180$

Or $8x = 800$, making $x = 100$

Hence, $\frac{3x}{4} = 75$ and $(\frac{5x}{4} - 20) = 105$

118.C

Area of ellipse is: πab , where a and b are the half of the length of major and minor axis.

Substituting a with 6 and b with 1.4 (π being 3.14), we get the area as 26.4 approximately.

119.C

$(x^2 - x - 6)$ is a factor of the fourth degree equation. Hence, the roots of $(x^2 - x - 6)$ (3 and -2) will satisfy the fourth degree equation.

Putting $x=3$ in $x^4 + ax^3 - x^2 - bx - 12 = 0$, we get $81+27a-9-3b-12=0$, or $27a-3b = -60$(1)

Putting $x = -2$ in the equation, we get $16-8a-4+2b-12=0$, or $8a-2b=0$ (2)

Solving the two, we get a as -4 and b as -16

120. **B**

Let the speed of the train be x km/h.

The resultant speed of the train with respect to the first person shall be $(x-4)$ km/h, and that for the second person is $(x-6)$ km/h.

In 4.2 seconds, the train overtakes the first person. Hence, the distance between them is $\frac{4.2}{3600} \times (x-4)$

In 4.8 seconds, the train overtakes the first person. Hence, the distance between them is $\frac{4.8}{3600} \times (x-6)$

These two values are equal. From this, we get $x = 20$ km/h.

Reasoning and Logical Ability

121. **A**

The passage discusses how the presence of wealth in a country does not necessarily mean the country is out of poverty. The author's argument is that having a strong economy is meaningless if a significant portion of the population is struggling to survive.

The question asks us to choose a logical conclusion to the passage. We can immediately eliminate options B and C:

- B suggests that the underprivileged should have access to luxury items, which is neither a logical conclusion nor aligns with the author's argument. The author does not imply that providing luxury items to the underprivileged is necessary.
- C suggests that an inflow of money will boost the economy, disregarding the author's point that simply having money in a country does not make it a strong economy or alleviate poverty. The author's main argument is that wealth should be distributed among the people, not concentrated in specific sections.

Option D is also out of context. While political stability and social freedom are beneficial, they are not the focus of the passage. The author is concerned with the financial well-being of the underprivileged as a sign of an improving economy, rather than discussing broader social reforms.

Option A is the best choice. Improving living standards means that the significant population of underprivileged individuals would have better lives and not struggle merely to survive. According to the author, this improvement would be the true sign of a country overcoming poverty.

Therefore, Option A is the correct answer.

WITH DETAILED SOLUTIONS AND ANALYSIS

122. **B**

Converting the speed of the train from km/hr into m/s, we get $72 \times \frac{5}{18} = 20$ m/s

To completely cross the bridge, the train end would have entered from one end, and the end of the train would have to come out, which, we are given, makes 30 seconds.

The total distance covered by the engine of the train in this distance would be the train's length and bridge's length.

$$20 \times 30 = 250 + \text{Bridge length}$$

$$\text{Bridge length} = 600 - 250 = 350 \text{ m}$$

Therefore, option B is the correct answer.

123. **D**

In such questions, instead of writing down all the possible team combinations, we should consider each option individually and see which option does not break any rule and is a valid team composition.

looking at the options,

We can eliminate option B on the basis of rule 1 itself.

Rule 1 says that Ruby and Yash will always be selected together. In option B, we have Yash but not Ruby, so this configuration would not be possible.

We can eliminate option C on the basis of breaking rule 2.

Rule 2 says that if Sonal is selected, neither Manish nor Bhuvan can be selected, yet in option C, we have Sonal and Bhuvan on the same team.

We can eliminate option A on the basis of breaking rule 3.

Rule 3 states that if Raveena is selected, Bhuvan is definitely selected, but in option A, Raveena is selected, and Bhuvan is not selected.

That leaves us with only option D, which would be our answer.

124. **C**

The main statement talks about ban/tax on plastic bags and measures not being implemented properly.

Hence, we can safely say that plastic bags are illegal to use at certain places as they are banned in some countries. This makes 1 a valid conclusion.

Further, the lack of implementation of measures show that authorities are not strict enough. This makes 2 a valid conclusion.

125. **A**

The information in the statements can be represent as follows:

Coming to conclusions:

(1) As we can see, there might be some vultures that are not parrots. Therefore, conclusion 1 is not necessarily true.

(2) "Some parrots are eagles." Although in the diagram, there is an overlapping region between Parrots and Eagles, the region can be empty as well. Therefore, we cannot conclusively say that some parrots are eagles.

(3) This conclusion directly goes against statement c which said that all vultures are sparrows, therefore, this too can be concluded.

None of the conclusions can be reached from the statements.

Therefore, option A is the correct answer.

126. **A**

Multiplying the opposite numbers in the first diagram we get $5 \times 2 = 10$ & $6 \times 3 = 18$

Adding them, we get the number in between, which is 28

Multiplying the opposite numbers in the second figure, we get $4 \times 4 = 16$ & $3 \times 8 = 24$

Adding them, we get the number in between, which is 40

Similarly, for the third figure, by multiplying the opposite numbers, we get $6 \times 4 = 24$ & $6 \times 5 = 30$

Addin them, we should get the number which should come in between, which is 54

Therefore, Option A is the correct answer.

127. **C**

The difference between the first two numbers is $117-113 = 4$

The difference between the third and the second number is $126-117=9$

The difference between the fourth and the third number is $151-126=25$

The difference between the fifth and the fourth number is $200-151=49$

We can see that all the differences are squares of the prime numbers.

The next difference would be the square of the next prime number, $11^2 = 121$

making the sixth number of the series to be $200+121 = 321$

Therefore, Option C is the correct answer.

128. **D**

Ishan was initially facing east, so when he turned right, he faced south.

Then he walked 30 m south.

The then turned left, facing east, walked 10 m east.

He then finally turned left again, facing north and walked 15m

In essence, he walked 30 m south and 15 m not, making him move 15 m southwards.

And he moved 10 m eastwards.

Givng his net distance from his starting position to be $\sqrt{225 - 100} = \sqrt{125}$, which is slightly more than 11m

129. **D**

From statement III in the question, if Raveena is selected, then Bhuvan has to be definitely selected. Given that Raveena is selected, we can say that Bhuvan is also selected.

From statement II, we can see that Sonal can be selected only when none of Manish and Bhuvan are chosen.

We know that Bhuvan is selected. So, Sonal can't be chosen.

130. **A**

The number of days in between 1 January 2011 and 1 January 2007 is 1461.

$1461 \div 7 = 5$. So, if 1 January 2007 is Wednesday then 1 January 2011 is Monday(5 days after Wednesday).

131. **A**

Vishi's statement contradicts Shruti's and Vihan's statements, so only Vishi's statement can be false.

This means Vihan's statement, "She is wearing red," is true. So, Anu's dress is red.

SRCC GBO CRASH COURSE

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

132. **B**

A talks about a stable atom having zero net charge. R talks about the ionization of atoms. Both statements are true, but A needs an explanation as to why a stable atom has a net charge of zero, which R doesn't.

133. **C**

Paper is green.

Material	Color	Shape
Paper	Green	
Cloth		
Plastic		

Plastic is cut in a square but not pink. Only color left is red.

So. Plastic is cut in a square and colored red.

Material	Color	Shape
Paper	Green	
Cloth		
Plastic	Red	Square

So, cloth is pink. The questions says that pink colored material is circle shaped.

So, cloth is pink and circled shaped. And paper is triangle.

Material	Color	Shape
Paper	Green	Triangle
Cloth	Pink	Circle
Plastic	Red	Square

134. **A**

There was an error in the question, even in the actual exam. We can't resolve it.

135. **C**

Roma was ranked 8^{th} from the top, and Arjun was ranked 9^{th} from the bottom. In the next exam, their rankings were interchanged. This means Arjun is ranked 8^{th} from the top and is also given as 28^{th} from the bottom. So, there are seven people ahead of Arjun and 27 below Arjun. The total number of students is $7+27+1(\text{Arjun}) = 35$.

136. **A**

A states that hard work and doing the same smartly are important for achieving the desired goals. R elaborates upon the same and substantiates that only hard work is not sufficient to reach the goals. Hence, A and R are true with R being the correct explanation of A.

138. **C**

Let us take the LCM of 12 and 24, which is 24 (total work).

Hence, we can say that Becca does 2 units of work per day while Jason does 1 unit of work per day.

Together, they shall do 3 units of work per day.

To complete 24 units, they shall take 8 days.

139. **D**

Statements:

- (a) All curtains are sheets.
- (b) Some sheets are shawls.

(c) Some covers are sheets.

The venn diagram of the information from above statements looks as

Conclusions I. Some curtains are covers.

From the diagram the statement some curtains are covers is not true.

Conclusions II. Some shawls are covers.

We can see in the diagram, that there is no intersection in the shawls and covers. So, conclusion II is also false.

140. **D**

Let us use the initials of names to denote them.

We know:

1. It can be SMP or PMS

2. A _ _ _

3. A _ _ P _

Now, for 3 to be valid, we can have SMP from 1 as the second combination will make this invalid.

Hence, ASMP_, which means Monisha is in middle.

141. **C**

Statement a) All cities are villages.

Statement b) Some states are cities.

Since all cities are villages and some states are cities, some states are villages.

Conclusion i) All states are villages.

We know only some states are villages. So, all states cannot be villages.

Conclusion II. Some villages are states.

We know only some states are villages. So, some villages will definitely be states.

Conclusion III. Some villages are cities.

We know all cities are villages. So, some villages are cities is true.

Conclusion II and III follows but not I.

142. **D**

The path he travelled will look as below.

From start the final position is in north-east direction.

SRCC GBO Cracku's WhatsApp Group

143. **B**

The oviparous animal or bird reproduces by laying eggs. Ostrich is oviparous. Some types of sharks are oviparous. So, the diagram looks as follows.

So, option 2 is the answer.

144. **D**

Statement A discusses how small industries often lead to development and urbanization in rural areas. Statement B provides an example of this concept in action.

Conclusion A exaggerates in two ways: first, by using the word "definitely," which implies certainty, whereas the statements indicate that this process often occurs but is not guaranteed; second, by suggesting that people are encouraged to seek a better life. The statements focus on development and urbanization, not on people's motivations or aspirations.

Conclusion B states that big corporations help facilitate development in some way. This logically follows from the statements, as even if big corporations are not directly serving the rural areas where they set up industries, they contribute to development through infrastructure improvements.

Therefore, option D is the correct answer.

145. **C**

We are given that Tara is Lakshay's granddaughter.

And we are also given that Lakshay only had one child.

Along with the information that Lakshay is Ruchi's father-in-law, we can deduce that Lakshay had a son who was married to Ruchi, and they had a daughter named Tara

We are given that Ani is Tara's sister.

We are also given that Indar is Ani's father, making Indar Ruchi's husband and Lakshay's son.

Finally, we are given that Arohi is Indar's paternal grandmother.

Making Arohi Lakshay's mother.

We can finally get Ani to be Arohi's great-granddaughter.

Therefore, option C is the correct answer.

146. C

The main statement concerns the high number of road accidents. Hence, the course of action shall be aimed at reducing the same and shall be reasonable at the same time.

This makes 1 correct. 2 is incorrect, as it is an unreasonable step to stop people from using the roads.

147. D

Since the final admission is granted after the evaluation done at the end of two months, it is clear that the aptitude is determined after the selection process. Also, considering that the evaluation takes place for final admission, it is implicit that the students try to prove their potential for the same. Hence, both the assumptions are valid.

WITH DETAILED SOLUTIONS AND ANALYSIS

149. D

The only directional constraint we have is for Ruchi and Aparan, so that would be a good starting point.

Placing Ruchi at the bottom and Aparna to the second left to her.

After that we are also given that Perna is opposite to Ruichi, making Perna at the top.

Net, we are given that Sehaj, Karan and Tony are in a sequence, so they must occupy the right side of the circle. As for their positioning, Frahan sits next to Perna and opposite to that, giving us only one possible configuration, i.e., Frahan is to the right of Perna, and Tony is to the left of Perna.

And the only spot left would be acquired by Karan.

As we can see, Aparna sits opposite Karan.

Therefore, Option D is the correct answer.

150. **C**

We are also given No phones are robots, therefore, the overlap of Phone and robots would be empty.

Now, coming to the statements:

As we can see, Some gadgets would indeed be machines

Only one of conclusions II and III can be true, depending on whether the overlap of phones and machines is empty.

Therefore, conclusion I follows, and one of II or III would follow.

Therefore, Option C is the correct answer.

151. **B**

64 is 4 cubed.

The ? should be replaced by 13 cubed.

$$13^3 = 2197$$

Therefore, Option B is the correct answer.

152. **B**

Let's take a look at Lora's statements:

In her first statement, Lora says that Tammy distracted her, and in the second statement, she says that Tammy always tells the truth.

Coming to the conclusion:

(1) Since all lights are wires and all wires are switches, necessarily all lights would have to be switches.

(2) Some switches can not be wires, but since all wires are switches, at least some switches would have to be wires.

Hence, Both the conclusions follow through the statements.

Therefore, Option D is the correct answer.

156. B

The statement says India's safety and health are not good enough (below standards), especially as we saw during the pandemic.

Assumption I: The statement doesn't say the standards are the problem. It just says we aren't meeting them. Maybe the standards are fine, but we haven't done enough to reach them.

Assumption II: If something isn't good enough, it often means it didn't get enough attention or money. It's a guess that health and safety weren't a top priority for investment if they are now revealed to be below standard.

So, the statement suggests that health and safety might not have been a priority (Assumption II), but it doesn't necessarily mean the standards themselves are too high (Assumption I).

157. C

There are 40 students in the class and Anuja's rank is 17th from the top.

This means there are 16 people above her and 23 below her, making her rank 24th from the bottom.

Similarly, Mihir is 18th from the top.

This means there are 17 people ahead him and 22 below him, making his rank 23rd from the bottom.

Hence, the correct answer would be 24th and 23rd.

Therefore, Option C is the correct answer.

158. D

The difference between the first two terms is $329 - 323 = 6$

The difference between the second and third terms is $344 - 329 = 15$

6 is 2 times 3

15 is 3 times 5

The pattern here is that the difference is multiples of consecutive primes; the next difference would be 5 times 7 = 35, making the next term to be $344 + 35 = 379$

The next difference would be 7 times 11 = 77, making the fifth term to be $379+77 = 456$

This satisfies our given sequence, and 379 is one of the options.

Therefore, Option D is the correct answer.

159. **A**

In the given sequence, we can see that right after s, we get g, and right after f, we get a c

The first two blanks must then be filled by g and c, respectively
narrowing down our choices to A and B

The last blank should be occupied by sg, in order to give us a complete sequence of sgfc

Therefore, option A is the correct answer.

160. **A**

Conclusion I: Online education is a necessity, but has many demerits with itself.

This conclusion logically follows from the statements. The statements suggest a heavy reliance on electronic devices for education, indicating the necessity of online education. However, they also highlight the negative consequences of increased screen-time, implying that online education comes with demerits.

Conclusion II: We should stop online education as it has harsh negative effects on people connected to it.

This conclusion does not logically follow from the statements. While the statements highlight the harmful effects of increased screen-time associated with online education, they do not suggest stopping online education entirely. There may be ways to mitigate the negative effects without completely halting online education.

Conclusion III: Online education is very helpful as everything is easily accessible.

This conclusion also logically follows from the statements. The statements indicate that education materials are now easily accessible through electronic devices, supporting the idea that online education is helpful in terms of accessibility. However, it's essential to note that while accessibility is highlighted, the statements also acknowledge the negative consequences of increased screen-time.

So, Conclusions I and III logically follow from the provided statements, while Conclusion II does not.
