Verbal Ability

Instructions [1 - 5]

Read the given passage and answer the questions.

For those of us without access to outside green space, houseplants are a stylish and affordable way of getting a nature fix. Alongside looking nice, indoor plants actually have several other perks - the biggest benefit of which could be improving your mental health. And the good news is you don't need to be a self-professed "plant parent" to experience these benefits either. One in eight UK households don't have access to any kind of garden. Young people and those from minority ethnic backgrounds are among those least likely to have a garden. Not having access to nature can have a number of effects on our health. It's been linked to symptoms of depression and anxiety, as well as other health conditions, such as asthma, cardiovascular disease, and poor immune function. For many of us, houseplants are an essential link to nature. While there's not yet a robust body of research on the mental health benefits of houseplants specifically, plenty of studies have shown how beneficial green space and gardening are for mental health. For instance, one study found that people who garden daily have better wellbeing and lower stress levels compared to those who don't. Gardening also reduces symptoms of depression and anxiety and increases positive emotions to the same extent as biking, walking and eating out. Many of these outcomes are likely to be true of houseplants too. A recent review of 42 studies demonstrates that even just being in the presence of indoor plants can improve mental and physical health. These experiments compared participants doing various activities in rooms with or without plants. The presence of plants saw better performances on cognitive tasks involving focus, sorting or memory recall, greater pain tolerance when holding hands in ice cold water, and lower levels of physiological stress. Interestingly, the aesthetic appearance of plants is important too, with separate research showing that people tend to react more positively to lush, green plants with rounded and denser foliage. But most of these studies are centred around the mere presence of plants. From research on the benefits of gardening, we can assume that caring for houseplants will bring out many more emotional benefits - such as pride, social connection, satisfaction, fascination, mental resilience in times of stress, and may even help you heal from past trauma.... Plants can remove pollutants such as carbon dioxide, nitrogen dioxide (from nearby traffic), fine particles (from dust) and volatile organic compounds (from air fresheners, cooking and cleaning). For people indoors for the majority of the day, indoor air quality is hugely important. High concentrations of carbon dioxide can reduce cognitive performance (such as concentration and memory recall) while prolonged exposure to other indoor pollutants can cause long-term health problems - ranging from minor eye or throat irritations to respiratory problems and cancer. But removing a meaningful quantity of indoor pollutants would require a lot of plants in a very bright room - something unrealistic for most people. If you do want to give it a try, plants with a high leaf area - such as an India rubber tree (*Ficus elastic*) or devil's ivy (*Epipremnum aureum*) are your best bet.

1. Which of the following statement is TRUE?

- A Gardening maximizes the symptoms of depression and anxiety.
- B For many of us, houseplants are an essential link to nature.
- C Not having access to nature has no effect on our health.
- D People tend to react more positively to artificial plants than to real plants.

2. Please select a suitable word from the given choices which stands closest in meaning to the word 'resilience' in the given passage.

- A Grit

- B Tribulation
- C Bummer
- D Affliction

3. Which of the following will disapprove the main idea of the passage.

- A Lack of access to nature can have negative effects on mental and physical health, including depression, anxiety, and various diseases.
- B Research suggests that being in the presence of indoor plants can improve mental and physical health, including cognitive performance and stress reduction.
- C Caring for houseplants can bring emotional benefits such as pride, social connection, satisfaction, fascination, and mental resilience.
- D Indoor plants may not effectively remove indoor pollutants or significantly improve indoor air quality due to the unrealistic requirement of having many plants in a very bright room.

4. Please select a suitable word from the given choices which stands closest in meaning to the word 'cognitive' in the given passage.

- A reactive
- B rational
- C noncerebral
- D nonanalytical

5. Select the CORRECT option which shows the best summary of the passage.

- A Houseplants offer a cost-effective way to connect with nature, enhance mental health, manage green spaces, and aid in pollutant removal, albeit requiring many plants in a well-lit setting for notable outcomes.
- B Indoor plants or houseplants have no impact on mental health and only serve aesthetic purposes.
- C Houseplants are an expensive and ineffective way of connecting with nature for those without access to outdoor green space.
- D Houseplants have no emotional benefits and do not contribute to satisfaction, fascination, or mental resilience.

6. Select the most appropriate option to fill in the blank.

The city of Varanasi by the Ganges is not only India's oldest, but also one of the most important cities _____ the Hindus. Funeral rites (cremations) are famously performed _____ the city, which dates back to around 1000 BCE.

- A to; for

- B for ; in
- C for ; into
- D by ; in

7. Select the most appropriate ANTONYM of the underlined word.

Rising greenhouse gas emissions intensify global warming, impacting ecosystems, weather patterns, and sea levels worldwide.

- A Vorse
- B Diminish
- C Amplify
- D Escalate

8. The following sentence has been split into four segments. Identify the segment that contains a grammatical error.

In today's motivational literature, / failure is often celebrated / as a essential / stepping stone to success.

- A failure is often celebrated
- B stepping stone to success
- C as a essential
- D In today's motivational literature

9. Select the most appropriate option to fill in the blanks.

Cells also began living together, probably because certain benefits could be _____. Groups of cells might be able to feed more _____ or gain protection from simply being bigger. Living _____, cells began to support the needs of the group by each cell doing a specific job.

- A obtained, efficiently, collectively
- B imagined, generously, deficiently
- C abstained, efficiently, effusively
- D contained, efficiently, separately

10. Select the most appropriate option to fill in the blank.

The crowd was _____ by his passionate speech.

- A carried off
- B carried on
- C carried away

D carried out

Instructions [45 - 48]

Consider the provided scenario:

- A shepherd possessed a certain amount of cash, sheep and goats.
- The value of a sheep is ₹5,400 and the worth of a goat is ₹1,350.
- The shepherd distributed his cash and cattle equally in terms of value among his four sons.
- The eldest son received sheep worth 20% of the total worth and ₹3,750 in cash.
- The second son received goats worth 20% of the remaining worth and ₹67,500 in cash.
- The third and fourth sons received an equal number of sheep and goats, amounting to 20% of the remaining worth after the previous distribution.
- Each of the third and fourth sons received ₹33,750 more in cash than what the second son received.

Answer the following questions based on the given information.

45. The total number of legs of all the cattle is:

- A 540

Based on this information, answer the questions that follow.

49. If an individual decides to sell 1 share of Company C and 1 share of Company D to buy 1 share of Company A at the end of a year, the potential maximum gain for the individual resulting from changes in share values is:
- A 10
B 60
C 35
D 45
50. The year in which the most substantial percentage increase in market value for any share is recorded is:
- A 2019-20
B 2018-19
C 2021-22
D 2020-21

51. Which company's share exhibits the most significant percentage increase in market value during any year throughout the entire period?
- A company A
B company C
C company D
D company B
52. The year in which the greatest absolute change in market value for any share occurs is:

- A** 2021-22
- B** 2020-21
- C** 2019-20
- D** 2022-13

Instructions [53 - 56]

Study the given information answer the questions that follow.

There are two coaching institutions in a town, institution A and institution B, the total number of students in both institutions are 1350. The ratio of the students in institution A to that of institution B is 7 : 8. There are only three classes in each Institution, Class X, Class Y and Class Z. In institution A, 70% students are boys and the rest are girls, whereas in institution B the ratio of boys to girls is 11 : 7.

In institution A, $\frac{4}{7}$ of the total girls enrolled in Class Y, $\frac{5}{9}$ of the remaining enrolled in Class Z and rest in Class X. Out of the total boys in institution A, $42\frac{6}{7}\%$ enrolled in class X, $44\frac{4}{9}\%$ of the remaining in Class Y and the rest in Class Z.

In Institution B, $\frac{4}{11}$ of the total boys enrolled in class Y, and the number of boys enrolled in class Z is 5% more than the boys enrolled in class Y and rest in class X. one-fourth of the total girls are enrolled in class Z, and the number of girls enrolled in class X is 10% more than the girls enrolled in class Y.

53. The number of boys enrolled in class X in institution A is what percentage more than the number of girls enrolled in class Y in institution B?

- A** 69%
- B** 89%
- C** 76%
- D** 56%

 SRCC GBO **Cracku's** WhatsApp Group [Join Now](#)

- 54.** Find the total number of students enrolled in class Y of both institutions.

- A** 440
- B** 560
- C** 480
- D** 410

55. What is the difference between the number of boys enrolled in Class Y in institution B and the number of girls enrolled in Class X in institution A?

- A** 112
- B** 136
- C** 148

D 124

56. The total number of boys enrolled in classes X and Y in institution A is what percentage of the total number of girls enrolled in classes Y and Z in institution B (rounded off to the integer)?

A 177

B 182

C 187

D 172

Instructions [57 - 60]

The provided bar graphs outline the population and national income of a country from the fiscal years 2014-15 to 2019-20.

For each of the ensuing questions, select the most suitable option.

57. In which year is the increase in per capital income compared to the previous year the lowest?

A 2015-16

- B 2019-20
- C 2017-18
- D 2016-17

58. In which year is the difference between the percentage increase in per capital income and the percentage increase in population compared to the previous year the highest?

- A 2017-18
- B 2015-16
- C 2016-17
- D 2018-19

59. In which year is the per capital income the highest?

- A 2014-15
- B 2019-20
- C 2015-16
- D 2017-18

60. Which of the following years witnessed the highest increase in per capital income compared to the previous year?

- A 2016-17
- B 2017-18
- C 2015-16
- D 2018-19

Instructions [61 - 64]

The table provided displays the estimated cost (in ₹ lakh) for the construction of a canal between two points.

	2020	2021	2022	2023
Graphing	62.3	11.3	3.3	0.8
Bolster	0.0	142.5	120.0	112.5
Brace	0.0	105.0	67.5	90
Slabs	0.0	22.5	18.0	24
Other material	0.0	37.5	27.0	31.5
Labour	3.2	37.5	30.0	27
Management	11.3	22.5	22.5	21.0
Exigencies	1.5	22.5	6.3	7.5

Based on the information in the table, answer the questions that follow.

61. After preparing the estimate, the provision for contingencies is deemed inadequate and is therefore doubled. By how much percentage does the total estimate increase?

- A 3.07%
- B 3.47%
- C 2.87%
- D 3.27%

62. To ensure that the total expenditure remains within ₹1,050 lakh, an equal reduction in management expenditure is proposed for all years. What will be the percentage reduction for the year 2021?

- A 42.78%
- B 52.78%
- C 37.78%
- D 47.78%

SRCC GBO CRASH COURSE

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

63. If the cost of materials increases by 5% each year from 2022 onwards, by how much with the estimated cost (in lakh ₹) rise.

- A 21.53
- B 22.53
- C 23.53
- D 24.53

64. If the length of the canal to be laid each year is proportional to the estimated cost for materials and labour, what fraction of the total length is intended to be completed by the third year?

- A 0.74

- B 0.68
- C 0.72
- D 0.70

Instructions [65 - 68]

Chart 1 shows percentage of revenue generated in four quarters of year 2020 for a company. Chart 2 shows the profit by percentage of revenue generated for that respective quarter in year 2020.

If the total revenue generated by company is 225 million rupees in year 2020, then study the charts and answer the questions that follow.

65. In which of the following quarters is the profit the maximum?

- A Fourth
- B First
- C Third
- D Second

66. What is the average of profit (in million rupees generated in the 1st and 4th quarters?

- A 1,49,17,500
- B 2,45,87,500
- C 4,43,59,500
- D 3,15,46,500

67. What is the profit (in rupees) of the company in the 2nd quarter of the year 2020?

- A 72,45,500
- B 86,62,500
- C 92,78,500
- D 68,86,500

68. If x is the profit generated in the 1st and 2nd quarters and y is the profit generated in the 3rd and 4th quarters, then find which of the following relations is correct?

- A $x = y$
- B $x > y$
- C $x < y$
- D $y = 2x$

Instructions [69 - 72]

The following table gives the marks obtained by six students in six different subjects in an examination. The maximum marks for each subject are given in the brackets.

Students	Subjects(Max. Marks)					
	Hindi (120)	English (130)	Math (150)	Economics (140)	Accountancy (160)	Geography (100)
Aman	95	65	115	100	125	90
Kartik	60	95	130	95	100	80
Mukesh	105	90	95	110	140	85
Lokesh	55	115	60	65	75	70
Sumit	75	85	75	80	95	75
Sandhya	85	110	120	130	130	95

69. Find the ratio of total percentage marks obtained by Sumit and Sandhya in Hindi English and Maths.

- A 49 : 73
- B 53 : 78
- C 47 : 63

D 39 : 88

70. What percentage is the total marks obtained by Lokesh and Sumit in Hindi, English and Maths of the total marks obtained by Aman and Kartik in Economy, Accountancy and Geography correct to one decimal place)?

A 73.1%

B 62.4%

C 78.8%

D 65.9%

71. What is the average of total marks obtained by Aman, Kartik, Mukesh and Lokesh in all subjects?

A 523.25

B 493.75

C 463.25

D 553.75

WITH DETAILED SOLUTIONS AND ANALYSIS

72. What is the difference of the total marks obtained in all subjects by Sumit and Mukesh?

A 130

B 150

C 120

D 140

Instructions [73 - 76]

The following graph shows the runs scored by three batsmen X, Y and Z in the given years.

73. What is the ratio of the total runs scored by batsman X and Z in the given six years?

- A 723 : 689
- B 619 : 515
- C 547 : 643
- D 397 : 523

VIDEO SOLUTION

74. In which of the following years were the lowest total runs scored by the given three batsmen?

- A 2018
- B 2020
- C 2023
- D 2019

VIDEO SOLUTION

75. What is the difference between the total runs scored by batsman X in the year 2020 to 2023 and batsman Z in the year 2018 to 2021?

- A 12
- B 80
- C 150
- D 100

VIDEO SOLUTION

76. In 2021, what was the average of total runs scored by the given three batsmen?

- A 950
- B 720
- C 830
- D 880

VIDEO SOLUTION

Instructions [77 - 80]

The following graph shows the revenue generated by three companies A, B and C in different years.

77. What is the average revenue generated by companies A, B and C in year 2015?

- A 330
- B 280
- C 380
- D 450

78. What is the ratio of total revenue generated by company A to company B in given 5 years?

- A 257 : 223
- B 179 : 229
- C 323 : 249

D 353 : 281

79. What percentage is the revenue generated by companies A and B in year 2016 of revenue generated by companies B and C in year 2018?

A 65.22%

B 69.44%

C 79.66%

D 74.88%

80. What is the average of total revenue generated by company A in 2019, company B in 2018 and company C in 2016?

A 350

B 280

C 390

D 410

Quantitative Ability

81. Denote the origin by O , (2, 1) by P and (-1, 2) by Q. If R and S are marked on the XY -plane such that OR = 30 units, OS = 40 units. P lies on OR and Q on OS , then what is the distance between R and S , in the given unit?

A 50

B 64

C 57

D 70

82. The ratio of an interior angle to its corresponding exterior angle of a regular polygon is 9 : 2. If number of sides in the polygon is n, then select the **CORRECT** option.

A n is an even natural number

B $n^2 - 10^2$ is an odd natural number

C $n^2 - n$ is an odd natural number

D $n^2 - 8^2$ is an odd natural number

83. For $p, q, r \neq 0$, let $f(x) = x^3 - px^2 + qx - r$, $g(x) = x^3 - \frac{q}{r}x^2 + \frac{p}{r}x - \frac{1}{r}$. Which of the following statements is/are true?

- I. $f(a) = 0 \Rightarrow g(\frac{1}{a}) = 0$
- II. $f(a) = 0 \Rightarrow g(1+a) = 0$
- III. $f(a) = 0 \Rightarrow f(\frac{1}{a}) = 0$

- A All of I, II and III
- B Only II and III
- C Only I and III
- D Only I and II

84. Sony has a certain quantity of mixture in her bottle containing water and milk in the ratio 3 : 5. respectively. She takes out some quantity of that mixture and replaces it with an equal quantity of water. If the ratio of water to the milk in the new mixture is $x : y$, then select the **INCORRECT** statement from the following options .

- A $x > y$ if $\frac{1}{6}$ part of the mixture is replaced with water.
- B $x = y$ if $\frac{1}{5}$ part of the mixture is replaced with water.
- C $x < y$ if $\frac{1}{7}$ part of the mixture is replaced with water.
- D $x > y$ if $\frac{1}{4}$ part of the mixture is replaced with water.

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

85. What is the value of $\log_{10} 50 + \left(\frac{\log_{0.5} 5}{1 + \log_2 5} \right)$?

- A 0
- B 2
- C 3
- D 1

86. Which of the following statements is/are true?

- I. $4^{10} + 6^{10}$ is divisible by 52.
- II. $7^{15} + 64^5$ is divisible by 11.
- III. $2^{20} - 49^{10}$ is divisible by 9.
- IV. $3^{15} - 8^5$ is divisible by 5.

- A Only I and II
- B Only I, II and III
- C Only I
- D I, II, III and IV

87. If A, B and C enter a partnership with shares in the ratio of $\frac{4}{3} : \frac{7}{2} : \frac{6}{5}$ after 4 months, A increases his share by 108.75%. If the total profit in the end of one year is ₹17,208 then B's share in the profit is:

- A ₹8,604
- B ₹7,604
- C ₹5,708
- D ₹2,002

88. The cost price of 25 articles is the same as the selling price of 'm' articles. If the profit is 25%, then what is the value of 'm'?

- A 20
- B 25
- C 18
- D 16

89. A group of men and women go to a restaurant. There are more men than women. If each person pays the bill according to what they ate, the average amount a man pays is Rs.1300 and the average amount a woman pays is Rs. 1000. If, instead, the bill is shared equally among all the people, which of the following is a possible amount that each person pays?

- A 1320
- B 1100
- C 1160
- D 1135

90. If in a GP, the sum of the first 18 terms is equal to the sum of first 22 terms and the sum of the first 19 terms is 65, then what will be the sum of first 4 terms? (Note: $i = \sqrt{-1}$)

- A -65
- B 0
- C -65i
- D 65i

91. If $x = 7$ then, what is the value of

$$\frac{x^{\frac{1}{2}} + x^{-\frac{1}{2}}}{1-x} + \frac{1-x^{-\frac{1}{2}}}{1-\sqrt{x}} = ?$$

A $-\frac{\sqrt{7}}{3}$

B $\frac{7}{6}$

C 3

D $\frac{1}{3}$

92. Let $A = \{2, 4, 6, 8, 10, 12\}$, $B = \{3, 6, 9, 12\}$. How many subsets of B are not subsets of A?

A 12

B 10

C 11

D 13

93. Following are given conversion of numbers from one base system to another base system. which conversion is correct?

I. $(4523)_6 = (1059)_{10}$

II. $(4523)_6 = (1069)_{10}$

III. $(0.203)_5 = (0.424)_{10}$

IV. $(0.203)_5 = (0.406)_{10}$

A I and IV

B II and IV

C II and III

D I and III

94. PQRS is a quadrilateral with side $PS = 7$ cm and $QR = 11$ cm. $\angle SPQ$ and $\angle QRS$ are both right angles. If E and F are points on PQ and RS, respectively, and QE is twice SF; $SF = n$ cm and n is an integer, then what is the value of n such that the area of the quadrilateral EQFS is 225 cm^2 ?

A 18

B 20

C 25

D 15

95. Kamal invested ₹5,500 at compound interest at the rate of R% per annum for 3 years. If the interest received by Kamal after 3 years is equal to 33.1% of the amount invested, then find the value of R.

- A 10
- B 15
- C 7.2
- D 11.3

96. Kamla can complete a piece of work in 24 days. Nirmala can complete this work in 18 days. Kamla started the work alone and worked for X days. After this Nirmala alone completed the remaining work in Y days, in this way the work is completed in 20 days. If X and Y are both positive integers, then select the correct option.

- A $\left(\frac{4x}{y}\right) + 1$ is an even integer.
- B $2X + Y = 22$
- C $X - Y$ is an odd integer.
- D $x^2 + 1$ is a multiple of 13

97. What is the domain of definition of $f(x) = \frac{\sqrt{(15-x)(\log_{10} x - 1)}}{x - 24 \log_4 2}$ is:

- A an open interval
- B a union of more than three open intervals
- C a union of two open intervals
- D a union of three open intervals

98. The sum of the first 24 terms of an AP is $\frac{12504}{25}$ and the sum of the next 24 terms is $\frac{17112}{25}$. What is the 3rd terms?

- A $\frac{89}{5}$
- B $\frac{8}{25}$
- C $\frac{441}{25}$
- D $\frac{429}{25}$

99. There are three ropes of lengths 4 m 50 cm, 9 m 90 cm and 16 m 20 cm, respectively. Each rope can be used to exactly measure the side of a square ground. What is the maximum possible value of each side, in m, if area of the square ground is less than 10,00,000 m^2 ?

- A 781
- B 891
- C 791

WITH DETAILED SOLUTIONS AND ANALYSIS

100. Suppose $M = (1, 1)$, $N = (-1, 3)$, $S = (2, 7)$, $T = (0, -4)$. If A and B, respectively, divide MN and ST in the ratio 2 : 3, what is the equation of line AB?

- A $25x - 20y - 41 = 0$
- B $25x - 20x + 41 = 0$
- C $20x - 25y - 41 = 0$
- D $20x - 25y + 41 = 0$

101. Two friends, Rama and Jaya, appeared an examination. Rama secured 8 marks more than Jaya and her marks was 55% of the sum of their marks. The marks obtained by them are:

- A 41, 49
- B 36, 44
- C 32, 40
- D 38, 46

102. For real numbers α and β , let $p(x) = x^2 - (\alpha + \beta)x + \alpha\beta$ and $q(x) = x^2 - (\alpha + \beta + 2)x + (\alpha + 1)(\beta + 1)$. Which of the following statements is true?

- A If $p(74) = 0$, then $q(73) = 0$
- B If $p(-88) = 0$, then $q(-91) = 0$
- C If $q(-97) = 0$ then $p(-98) = 0$
- D If $q(34) = 0$, then $p(35) = 0$

BUY NOW

103. The opposite sides of a regular hexagon are 18 cm apart. What is the length of each side of it?

- A $6\sqrt{3}$
- B $4\sqrt{3}$
- C $7\sqrt{3}$
- D $5\sqrt{3}$

104. The population of a town increased from 1,50,000 to 2,24,500 in 11 years. The average percentage increase of population per year is:

- A 4.54%

- B 8.75%
- C 4.52%
- D 4.37%

105. Which term of the following series is 17.25?
- 0.25, 0.25, 0.75, ...

- A 36^{th}
- B 31^{st}
- C 32^{nd}
- D 34^{th}

106. The least perfect square that is divisible by each of 321, 48 and 66 is:

- A $16 \times 1156 \times 11449$
- B $16 \times 1089 \times 11449$
- C $1089 \times 9 \times 11449$
- D $9 \times 121 \times 10404$

107. The area enclosed by $|x| + |y| = 2$ is:

- A 16 square units
- B $\sqrt{8}$ square units
- C 4 square units
- D 8 square units

108. If x and y are positive real numbers satisfying $x + y = 52$, then the minimum possible value of $91(1 + \frac{1}{x})(1 + \frac{1}{y})$ is:

- A $\frac{4105}{52}$
- B $\frac{5041}{52}$
- C $\frac{5103}{52}$
- D $\frac{3051}{52}$

C) $\frac{5103}{52}$ $q1(1+\frac{1}{x})(1+\frac{1}{y})$ $\Rightarrow q1[1+\frac{1}{x}+\frac{1}{y}+\frac{1}{xy}]$ $AM \geq HM$

D) $\frac{3051}{52}$ $AM \geq GM$

$\frac{x+y}{2} \geq \sqrt{xy}$

$\frac{1}{\sqrt{xy}} \geq \frac{2}{x+y}$

$\frac{1}{xy} \geq \frac{4}{(x+y)^2}$

$\geq \frac{4}{52^2}$

VIDEO SOLUTION

SRCC GBO Previous Papers

with detailed video solutions and analysis

109. Assume that $f : (-2, -1) \rightarrow (1, 2)$ is an onto function and for $i = 1, 2, 3, 4$, define $g_1(x) = f(x) - 2$, $g_2(x) = f(-x)$, $g_3(x) = -f(-x)$ and $g_4(x) = f(-x - 2)$. What is the correct arrangement of g_1, g_2, g_3, g_4 such that the graph of the k^{th} function lies in the k^{th} quadrant for $k = 1, 2, 3, 4$?

A g_1, g_2, g_3, g_4

B g_2, g_4, g_1, g_3

C g_3, g_4, g_2, g_1

D g_4, g_1, g_3, g_2

110. If $\frac{x^3}{z^2} < \frac{x^3+y^3+z^3}{x^2+y^2+z^2} < \frac{z^3}{x^3}$; x, y, z are positive real numbers, then which of the following options always ensure the given inequality to be true?

A $y > z > x$

B $x < y < z$

C $x < z > y$

D $z > x > y$

111. A number $1 + 7^{47}$ is divisible by x . Which of the following is also divisible by x ?

A $7^{94} + 1$

B $7^{141} + 1$

C $7^{188} + 1$

D $7^{11} + 1$

112. In a farmhouse, there are only horses and sheep. If 50% of the horses were sheep, then there would have been 50% more sheep than the number of horses. What percentage of all the animals are horses?

- A 80%
- B 50%
- C 40%
- D 60%

 VIDEO SOLUTION

113. If x and y are two positive integers, and m is the HCF of x and y such that $mxy = 1080$ and $3 < m < 12$, then how many possible ordered pairs of x and y exist?

- A 6
- B 2
- C 9
- D 18

114. A chord whose length is equal to the radius of a circle is drawn to divide the circle into two parts. If the radius of the circle is 42 cm, then what is the area of the smaller part (in cm^2)?

- A $21^2 \left(\frac{\pi}{3} - \frac{\sqrt{3}}{2} \right)$
- B $42^2 \left(\frac{\pi}{2} - \frac{\sqrt{3}}{4} \right)$
- C $42^2 \left(\frac{\pi}{6} - \frac{\sqrt{3}}{4} \right)$
- D $21^2 \left(\frac{\pi}{6} - \frac{\sqrt{3}}{4} \right)$

WITH DETAILED SOLUTIONS AND ANALYSIS

115. If we draw the graph of $f(x) = \log_{10}(x + 1)$ on the domain of definition, which quadrants does it pass through?

- A Second and fourth
- B First and second
- C First and fourth
- D First and third

116. In a club, a member is either an Indian or a non-Indian who is either a man or a woman. One-third of them are women, two-thirds of them are Indian and three-eighths of the non-Indians are women. What is the probability that a man picked at random is a non-Indian?

- A 0.2525
- B 0.2125
- C 0.2925
- D 0.3125

117. The longest chord of the circumcircle of the triangle made by x-axis, y-axis and $4x + 3y = 24$ is:

- A 2.5 units
- B 10 units
- C 5 units
- D 8 units

118. Which of the following inequalities is true for any positive real numbers a, b and c ?

- I. $ab(a + b) + bc(b + c) + ca(c + a) \leq 6abc$
- II. $\frac{a^2 + b^2 + c^2}{abc} \leq \frac{1}{a} + \frac{1}{b} + \frac{1}{c}$

- A Both I and II
- B Only I
- C Only II
- D Neither I nor II

119. Cars A and B start at the same time, from S and T towards T and S, respectively. After passing each other at point Y, they take 6 hours 40 minutes and 3 hours 45 minutes to reach T and S, respectively. If the speed of car A is 60 km/h, then how much time did Car A take to reach point Y?

- A 3 h
- B 5 h 30 min
- C 5 h
- D 4 h 15 min

120. Four girls and three boys have to sit in a row of seven chairs. If the chairs at the ends are to be occupied by girls and at least two of the three boys are supposed to sit adjacent to each other, then in how many different ways can they occupy these chairs?

- A 342
- B 324
- C 423
- D 432

Reasoning and Logical Ability

121. Four statements are given, followed by two conclusions numbered I and II. Assuming the statements to be true, even if they seem to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

- 1. Some sheds are caves.
- 2. All sheds are nests.
- 3. Only a few nests are stables.
- 4. Some sheds are dens.

Conclusions:

- I. Some caves are nests.
- II. No shed is stable.

- A Only conclusion I follows
- B Either conclusion I or II follows
- C Neither conclusion I nor II follows
- D Only conclusion II follows

122. In a certain code language, 'SUN RISES IN THE EAST' is written as '6T 5E 4N 7S 5N' and 'HOUSE OF MOHAN IS TOWARDS WEST' is written as '6T 9S 4S 7N 4F 7E'. How will 'RAM GOES TO SCHOOL' be written in that language?

- A 8L 4O 6S 5M
- B 6T 5M 4F 8E
- C 6L 2O 4S 3M
- D 5M 6S 4O 8L

123. Study the following figure and answer the question given below.

Which of the following statements is true?

- I. There are 2354 unmarried literate persons.
- II. There are 1513 not literate working persons.

- A Only statement II
- B Only statement I
- C Both statements I and II
- D Neither statement I nor II

124. Identify the letter-cluster that does not belong to the following series.

BYO, DZQ, HBU, NEZ

- A DZQ
- B HBU
- C BYO
- D NEZ

125. Study the given number series and answer the question that follows.

278926534292897242592976479273

How many 2s are preceded by 9 and followed by an even number?

- A Six
- B Five
- C Four
- D Two

126. An accurate clock shows 9 a.m. Through how many degrees will the hour hand rotate when the clock shows 7 p.m.?

- A 210°
- B 300°
- C 120°
- D 180°

127. A + B means A is father of B.
 A - B means A is daughter of B.
 A * B means A is son of B.
 A/B means A is mother of B.
 A & B means A is sister of B.
 A # B means A is brother of B.

Which of the following relations shows that N and M are husband and wife, respectively?

- A $N + T \& W \# X - M$
- B $N + T \& W - X - M$
- C $N + T \& W \# X \& M$
- D $N * T \& W \# X - M$

128. In a class, there are 43 students. Kunal's rank is 17^{th} in the class, who is ahead of Pinki by 6 ranks, Pinki being 7 ranks ahead of Balwan. If ranking system is from top to bottom, then what is Balwan's rank?

- A 28
- B 29
- C 23
- D 30

129. Select the number from the given options that can replace the question mark (?) in the following series.
 2, 5, 10, ?, 26

- A 15
- B 19
- C 17
- D 16

130. How many 5s are there in the following number sequence immediately preceded by an odd number, but NOT immediately followed by an odd number?
 256435295653 16495624215549672 14755496425

- A Two

- B Five
- C Three
- D Four

131. Select the option that is related to the third term in the same way as the second term is related to the first term.

FHJK : UQSP :: ACDL : ?

- A OWXZ
- B OZWX
- C ZXWO
- D ZWXO

132. Select the option that is related to the third number in the same way as the second number is related to the first number.

99 : 120 :: 143 : ?

- A 168
- B 361
- C 289
- D 189

133. Refer to the given letter, number and symbol series and answer the question that follows.

(Left) H O L Q Y & 4 Z 2 * 3 M & 7 S W # 8 2 p H * L (Right)

If all the numbers are dropped from the series, then which of the following will be seventh from the right?

- A S
- B W
- C M
- D &

134. Six teachers, Mukta, Indu, Poonam, Promila, Pinki, and Pihu, each teaching a different subject among Hindi, Computer Science, Sanskrit, Chemistry, English and Fine Arts (not necessarily in the same order), are seated around a table facing the centre. Pinki is opposite to the Sanskrit teacher. Poonam sits to the right of the Hindi teacher and is opposite to the person who is the Chemistry teacher. Pihu is opposite to the Computer Science teacher. Mukta is between the English teacher and the Computer Science teacher and is not the Chemistry teacher. Promila is opposite to the English teacher, who is to the immediate left of Pihu.

Who is the Fine Arts teacher?

- A Pinki
- B Pihu
- C Poonam
- D Indu

135. Study the following figure and answer the question given below.

Which of the following statements is true?

- I. People engaged in tertiary sector from urban area is more than non-urban area.
- II. People engaged in primary sector from urban area is more than non-urban area.

- A Only statement II
- B Only statement I
- C Neither statement I nor II
- D Both statements I and II

136. Select the term that will come next in the following series.

PRG, VLJ, BFM

- A HZQ
- B HAP
- C HAQ
- D HZP

137. Select the option that is related to the third term in the same way as the second term is related to the first term.

JXG : ZNW :: TRC : ?

- A SUH

- A Paternal Grandfather
- B Son's Son
- C Son-in-law
- D Father-in-law

146. In a certain code language, 'ACQUITIED' is written as 'grvwrzxf' and 'WAMPIRE' is written as 'rivkdm'. How will 'TABLE' be written in that language?

- A OVYZG
- B OYVGZ

C VOGYZ

D VOYGZ

147. A man walks 10 m south. Then turning to his right, he walks 12 m. Then turning to his left, he walks 8 m. Again, he turns to his left and walks 5 m. How far is he from his initial position?

A $\sqrt{363}$

B $\sqrt{383}$

C $\sqrt{353}$

D $\sqrt{373}$

148. Select the option in which the numbers share the same relationship as that shared by the given pair of numbers.

(NOTE: Operations should be performed on the whole numbers, without breaking down the numbers into its constituent digits. E.g. 13 - Operations on 13 such as adding / subtracting / multiplying, etc., to 13 can be performed. Breaking down 13 into 1 and 3 and then performing mathematical operations on 1 and 3 is not allowed.)

80 : 99

A 25 : 122

B 79 : 90

C 110 : 169

D 120 : 143

149. Select the term that will come next in the following series.

JWM, MYR, PAW, SCB

A VHF

B UDF

C VFH

D VEG

150. The mark of Kiran is greater than or equal to the marks of Hina. Hina and Tina got equal marks. The mark of Tina is greater than Urvi, but Urvi's marks are less than or equal to the marks of Ira. Based on the above information, which of the following statements is/are definitely true?

I. Urvi got less marks than that of Kiran.

II. Ira's marks are less than or equal to the marks of Tina.

A Neither statement I nor II

B Both statements I and II

C Only statement I

D Only statement II

151. Refer to the given letter, number and symbol string and answer the question that follows.

(Left) * 5 U £ ± 2 W @ 3 K 9 ÷ # 6 M & 4 A α 5 G δ 7 B % R Ø (Right)

If the sequence of the middle nine elements in the given string is reversed, then which of the following will be seventh to the right of the twenty-first element from the right end?

A M

B 6

C #

D 9

152. Select the option that is related to the third number in the same way as the second number is related to the first number.

08 : 62 :: 15 : ?

A 223

B 115

C 88

D 126

153. Four statements are given, followed by two conclusions numbered I and II. Assuming the statements to be true, even if they seem to be at variance with commonly known facts, decide which of the given conclusions logically follow(s) from the statements.

Statements:

1. Some hill is land.
2. All land is plateau.
3. Only a few land is peak.
4. Some peak is valley.

Conclusions:

- I. Some peak is hill.
- II. No hill is peak.

A Only conclusion I follows

B Only conclusion II follows

C Either conclusion I or II follows

D Neither conclusion I nor II follows

154. Read the given statement and arguments carefully. Assuming that the information given in the statement is true, even if it appears to be at variance with commonly known facts, decide which of the given arguments logically follow(s) from the statement.

Statement:

Should all members of parliament be highly qualified in India?

Arguments:

- I. A highly qualified person is honest.
- II. They will understand the real problems of people.
- III. No, the number of highly qualified people is very low in India. Therefore, this statement is against Indian democracy.

- A I and II follow
- B Only II follows
- C Only I follows
- D Only III follows

155. Read the given statement followed by two courses of action numbered I and II. You have to assume everything in the statement to be true and based on the information given in the statement, decide which of the suggested courses of action logically follow(s) from the statement.

Statement:

The price of onions is on the rise in India due to the lower production of onions.

Courses of Action:

- I. The government should give a minimum support price for onions to motivate farmers to crop them.
- II. The government should mandate onion cropping for all farmers.

- A Both I and II follow
- B Neither I nor II follows
- C Only I follows
- D Only II follows

156. Select the option that is true regarding the following two statements labelled Assertion (A) and Reason (R).

(A) Enrolment of girls in higher education is rising in India.

(R) The government is giving various scholarships to girls in higher education.

- A (A) is false, but (R) is true.
- B Both (A) and (R) are true and (R) is the correct explanation of (A).
- C (A) is true, but (R) is false.
- D Both (A) and (R) are true and (R) is not the correct explanation of (A).

Instructions [157 - 158]

Read the given paragraph carefully and answer the questions that follow.

Seven friends Zora, Yaana, Veena, Umang, Tina, Aavya and Christy are sitting around a circular table facing outside from the centre (not necessarily in the same order). Tina is second to the left of Aavya. Zora is seating to the right of Umang. Christy is seated second to the left of Tina. Tina is seating between Veena and Yaana.

Aavya is seating to the immediate right of Veena.

157. Who is sitting to the fourth right of Yaana?

- A Umang
- B Veena
- C Aavya
- D Tina

158. Who is sitting to the fourth left of Zora?

- A Veena
- B Tina
- C Yaana
- D Christy

Instructions [159 - 160]

Read the given paragraph carefully and answer the questions that follow.

A seven-floor building numbered from 1 to 7 (top to ground floor), has seven offices with different office bearers named Puneet, Raksha, Mohit, Yella, Gagan, Omi and Bhanu (not necessarily in same order). Each floor has only one office as follows.

- Yella's office is just below Raksha's office.
- There is exactly one office between Gagan's office and Omi's office.
- Puneet's office is just above Raksha's office.
- Neither Puneet nor Bhanu is in the topmost office.
- Omi is in the office on the lowest floor.

159. Select the odd one from the following.

- A Bhanu
- B Mohit
- C Yella
- D Puneet

160. On which floor is Bhanu's office?

- A 6
- B 4
- C 2
- D 5

Verbal Ability

Option B is True according to the passage.

2.A

B) Tribulation: Refers to suffering, not recovery.

D) Affliction: Describes hardship, not overcoming it.

The passage's main idea is that houseplants provide multiple benefits, particularly for mental health, and serve as an essential link to nature for those without access to outdoor green spaces.

Option d, however, disapproves the main idea by suggesting that houseplants may not effectively remove indoor pollutants or improve air quality due to impractical requirements, undermining one of the touted benefits and thus challenging the overall positive stance on houseplants.

Hence, Option D is the answer.

The word 'cognitive' in the given passage refers to the mental processes of acquiring knowledge and understanding through thought, experience, and the senses.

Therefore, rational is the most suitable word among the given options as it relates to the thinking and understanding aspects of cognitive functions.

The passage discusses how houseplants provide a connection to nature for those without access to outdoor green spaces. It mentions the mental health benefits of being around plants, including improved cognitive performance and reduced stress levels. The passage also talks about the potential for houseplants to remove indoor pollutants, although it notes that achieving significant results would require a large number of plants in a brightly lit room. This is captured in Option A

The other options are incorrect because they either negate or ignore key points made in the passage.

6. B

The most appropriate option to fill in the blanks is Option B

This option correctly uses the prepositions to convey the intended meaning. The city is important “for” the Hindus, and the rites are performed “in” the city.

The other options do not fit grammatically or contextually in the sentence.

7. **B**

The most appropriate antonym for the underlined word “intensify” is Option B.

In this context, “intensify” means to become more intense or to increase in degree or extent. Therefore, the opposite of “intensify” would be to decrease or lessen, which is what “diminish” means. The other options, “amplify” and “escalate”, are synonyms of “intensify”, not antonyms, and “vorsen” is not a recognized English word.

Therefore, “diminish” is the correct choice.

8. **C**

The segment that contains a grammatical error is Option C.

The error in this segment is the incorrect use of the indefinite article “a” before a word starting with a vowel sound. The correct phrase should be “as an essential”. The indefinite article “an” is used before words that begin with a vowel sound.

Therefore, the corrected sentence would be: “In today’s motivational literature, failure is often celebrated as an essential stepping stone to success.”

The other segments are grammatically correct.

9. **A**

The most appropriate option to fill in the blanks is Option A

So, the completed sentence would be:

Cells also began living together, probably because certain benefits could be **obtained**. Groups of cells might be able to feed more **efficiently** or gain protection from simply being bigger. Living **collectively**, cells began to support the needs of the group by each cell doing a specific job.

This option makes the most sense in the context of cellular biology and the evolution of multicellular organisms.

Options B,C and D are not suitable because they contain words that do not match the blank in the given context.

10. **C**

The most appropriate option to fill in the blank is Option C

So, the completed sentence would be:

The crowd was **carried away** by his passionate speech.

This phrase means that the crowd was deeply moved or swept up in the emotion of the moment.

The other options (carried off, carried on, carried out) do not fit the context appropriately.

11. **A**

Familiarity breeds contempt, which means extensive knowledge of or close association with someone or something leads to a loss of respect for them or it.

Options B, C and D try to take the idiom's meaning positively, which is the opposite of its actual meaning. Option A correctly describes the meaning of the idiom and hence would be our answer.

Therefore, Option A is the correct answer.

12. **C**

The sentence essentially conveys that the concept of a heritage and educational district raised/attracted the interest of citizens in the whole district.

Option C piqued the interest and best fits our sentence.

When something piques your interest or curiosity, the verb pique means to arouse, stimulate, or excite.

Therefore, option C is the correct answer.

13. **D**

Pathos is the power of a person, situation, piece of writing, or work of art to cause feelings of sadness, especially because people feel sympathy. So, pity would match best with it.

Paucity: smallness of quantity; scarcity; scantiness:

A pedant is a person who is excessively concerned with minor details and rules or with displaying academic learning. So, intellectual fits best, Therefore, Option D is the correct answer.

14. **C**

To be a fish in troubled waters is to be involved in a very difficult or delicate situation, which could cause you problems. Therefore, Option C best captures the meaning of the idiom.

15. **D**

Option D makes the most sense.

Warm reception: This suggests the hypothesis is being received positively, which aligns with "enjoyed."

Bipartisan support: This indicates support from both sides of the political spectrum.

Disclosure: This refers to making information public, which aligns with the government push.

16. **C**

To surmount something is to **to deal successfully with a difficulty or problem**

The opposite of this would be to surrender or give up. Therefore, yielded (Option C) is the correct answer.

17. **D**

Option D directly conveys the idea that addressing a small problem early prevents a larger issue later. It emphasizes the importance of being prepared and taking preventative measures to avoid future complications.

Here's why the other options are not as fitting:

Option A: This proverb warns against being overly optimistic about something that hasn't happened yet. While it can be related to caution, it doesn't directly address preparedness.

Option B: This proverb refers to situations where having too many people involved can lead to a negative outcome. It doesn't focus on caution or preparedness.

Option C: This proverb means to reveal a secret. It has no connection to caution or preparedness.

18. **C**

Option C best fits blanks.

Continue: Natural history data and research have always been important, and this phrasing suggests it's an ongoing practice.

Provide: This accurately describes how natural history data offers the foundation for further exploration.

Uncover: This term aligns with the purpose of using natural history data - to discover and reveal the underlying principles governing natural systems.

19. **A**

Leaves is the most natural and common way to express a habitual action in the present tense. It indicates a recurring event that happens at a specific time each day.

Has left would be appropriate if your mother had already left for her class today at 9 am, but it wouldn't be the best choice for describing a general habit.

Was leaving implies an action in progress in the past, which doesn't fit the context of a daily routine.

Is leaving could be used if you were talking about right this moment, but the context suggests this is a general routine that happens every day.

Therefore, Option A is the correct answer.

20. **A**

BDCA is the correct sequence of the sentences.

B is the first sentence. The paragraph begins with the description of the streets calming down after an initial period of panic. B is followed by D. Sentence D provides specific details about the reopening of the bazaar and the fishwives' actions.

Sentence C follows D. After the initial chaos, people resumed their usual activities, emphasizing a return to normalcy.

A is the conclusive statement. It highlights a significant change—the absence of foreign faces on the streets.

Therefore, the correct order to form a coherent paragraph is **BDCA**.

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

21. **C**

Option C is the correct. This word accurately reflects the meaning of “detrimental.” It implies harm, negative consequences, or adverse effects. Therefore, Option C is the correct choice.

Other options does not match the meaning of the underlined word.

22. **D**

The correct answer is Option D. The passage explains that Christmas trees had a detrimental impact on forests due to monoculture planting, making them vulnerable to pests and harsh weather. Additionally, the development of artificial trees using surplus materials is mentioned.

Option A: “Benign” means harmless or favorable, which doesn’t fit the context. The second blank should be filled with a verb, not a preposition. So this option is not suitable.

Option B : “Prolific” means abundant or productive, but it doesn’t convey the intended meaning of negative impact on forests. The second blank should also be filled with a verb. So this option is incorrect.

Option C: “Differential” doesn’t fit the context, and the verb tense is incorrect. This option is not the right choice.

23. **A**

The segment that contains a grammatical error is Option A.

In English grammar, when we use “one of” followed by a plural noun or pronoun, the verb that follows should be singular, not plural. In this case, “one of these authors” refers to a single author, so the verb “is” should be used instead of “are”. Hence, the segment “One of these authors are” contains a grammatical error. The corrected phrase should be “One of these authors is”. So, the corrected sentence would be:

“One of these authors is going to win the Booker Award for his or her book.”

24. **D**

The segment that contains a grammatical error is **Option D**.

The correct phrase is “put forth” or “presented” when referring to proposals in a meeting. The phrase “put on” is not typically used in this context. Hence, the segment “put on at the meeting,” contains a grammatical error. The corrected phrase should be “put forth at the meeting,” or “presented at the meeting,”. So, the corrected sentence would be:

“Several proposals were put forth at the meeting, but none was appealing enough.” or “Several proposals were presented at the meeting, but none was appealing enough.”

25. **D**

The most appropriate option to fill in the blanks is **Option D**.

"Hay provides the **bulk** of the horse's ration and may be of varying composition **according to** locale. Mash is bran mixed with water and with **various** invigorating additions or medications. It may be given to horses with digestive troubles or deficient eating habits."

This option makes the most sense in the context of the sentence, as it correctly describes the role of hay and mash in a horse's diet. The word "bulk" refers to the largest part or most of something, so it accurately describes the role of hay in the horse's ration. The phrase "according to locale" indicates that the composition of the hay can vary depending on the location. The word "various" in the context of the mash indicates that different additions or medications can be added to the mash.

26. **B**

The most appropriate option to fill in the blanks is **Option B**.

"The exhibit of the South African men in Boston began with a cacophony of animal **sounds** made by the 'savages' while out of sight. The troupe then **leaped** onto the stage, barely **clad** in skins and feathers and clutching spears and clubs, and **proceeded** to perform several native songs and dances."

This option makes the most sense in the context of the sentence, as it correctly describes the scene of the exhibit. The word "sounds" accurately describes the noises made by the 'savages', "leaped" is a suitable action for the troupe's entrance onto the stage, "clad" correctly describes their attire, and "proceeded" is the appropriate action for their performance of songs and dances.

27. **B**

The most appropriate option to fill in the blank is **Option B**.

"A momentous change is evident in transport networking and soon India **will join** the speed club."

This option makes the most sense in the context of the sentence, as it correctly indicates a future event or action. In this case, it suggests that India is expected to join the speed club in the near future. The other options do not correctly convey this future intention or assertion.

28. **A**

Option A is the correct answer.

Rejuvenate: This word means to make someone or something look or feel younger, fresher, or more lively. In this context, it is matched with the meaning "Refresh", which is similar in sense.

Relinquish: This word means to cease to keep or claim voluntarily; to give up. It is matched with the meaning "Renounce", which also means to declare one's abandonment of something formally.

Relegate: This word means to consign or dismiss to an inferior rank or position. It is matched with the meaning "Refer", which in this context could mean to pass a matter to (another body, typically one with more authority or expertise) for a decision.

So, the correct option is a-3, b-1, and c-2, which match each word to its correct meaning.

29. **A**

The segment that contains a grammatical error is Option A.

The correct phrase should be "the quantity of gray matter in your brain". So, the corrected sentence would be:

"Several studies support the idea that the amount of consistent sleep you receive significantly impacts the quantity of gray matter in your brain."

This is because "the" is used before a noun when the specific identity of the noun is known to the reader, whereas "a" is used before a noun when the specific identity of the noun is not known to the reader. In this case, we're referring to a specific quantity of gray matter (the one in your brain), so "the" is the appropriate article to use.

30. **B**

The segment that contains a grammatical error is Option B.

In English grammar, the verb "overcome" is typically followed by the preposition "with" when expressing an emotional state. The phrase "overcome with regret" means that someone is completely filled with regret.

So, in the sentence "At the end, Ashoka was overcome with regret at the bloodshed that had taken place as a result of the Kalinga battle", "with" is the correct preposition to use after "overcome" to convey the meaning that Ashoka was filled with regret. The preposition "in" is not typically used in this context. Hence, the segment "in regret at the bloodshed" contains a grammatical error.

31. **D**

A porpoise is a type of animal. So Option A is incorrect.

Option B can be eliminated as it says intentions.

Option C is incorrect as it implies something entirely different.

Option D is the correct answer.

32. **A**

To throw in the towel is to abandon a struggle; admit defeat. Therefore, the word that would best fit there is Abandon. So, Option A is the correct answer.

33. **B**

Sentence 1 introduces Nalanda, so it is logical that the next sentence builds on this. Considering this, Sentence A would be best suited to follow Sentence 1.

Sentence 1 states how the university "*attracted 10,000 students from across Eastern and Central Asia.*"

Sentence 3 elaborates on this by elaborating why they gathered here. So Sentence C must follow A.

Therefore, the correct answer is Option B.

34. **D**

Ingrained : (of a habit, belief, or attitude) firmly fixed or established; difficult to change.

Renowned: widely acclaimed and highly honoured: celebrated.

Ensued: happen or occur afterwards or as a result.

Renewed: to make like new.

Considering this, only "renewed" makes sense in the first blank.

Deeming is to come to think or judge. This fits perfectly in Blank 2 as well. Ineligible is essentially not being eligible (the migrants not being eligible). This fits in Blank 3. The policy is controversial.

Therefore, Option D is the correct answer.

35. **A**

The phrase hit the hay means to go to bed to sleep. Therefore, Option A is the correct answer.

36. **C**

CDAB is the correct order.

Sentence C sets the scene by describing the situation with Bala Singh and the luggage. It provides context for the subsequent events. Sentence D adds to the tension. The fact that the other men are watching the narrator intently suggests that something unusual is happening. Sentence A reveals the odd behavior of Bala Singh, who

doesn't greet the narrator and gives a consistent response about not being ill. It builds intrigue and curiosity. Sentence B provides further details about Bala Singh's behavior during the march, emphasizing his strange demeanor. It adds to the mystery and sets the tone for the rest of the narrative.

37. B

What the passage is trying to say is that because of digital cameras, the sales of the film cameras declined, or they were forced to bring out different models. Considering this, only Option B makes sense, as simulating, expanding or elevating most film cameras doesn't make sense.

Also, sales fall, so for the second blank too, fell is the right word.

Therefore, Option B is the correct answer.

38. B

Mellifluous, perspicacious, and discerning all describe positive mental qualities.

Mellifluous refers to something that is pleasing to the ear (sound).

Perspicacious means having a sharp intellect or good judgment.

Discerning means having or showing good judgment.

Ineffable, on the other hand, means something that cannot be expressed in words.

Therefore, while the other three words describe positive traits, ineffable describes something beyond words.

39. A

"Bite the bullet" is an informal phrase that means "to do something unpleasant or painful because it is necessary even though you would like to avoid it." So, Option A is the correct answer.

40. D

Sentence 2 is the odd one out.

Sentences 3 and 4 discuss vegetation in different mountain ranges and woodland types in Northern Spain, respectively. Sentence 1 focuses on esparto grass and its associated alfa grass, which is related to plant species.

However, sentence 2 stands apart because it introduces a different topic: brown forest soils in Galicia and Cantabria.

Data Interpretation

Explanation [41 - 44]:

First, let's create a table with the sales, expenditures, and profits values for each year.

The pie chart shows that 20% of the sales in 2020 were from the US, or 20% of 400 is 80 million.

Similarly, calculating for the other years and calculating, we get the following table:

Year	Sales%	Sales	Expenditure%	Expenditure	Equity	Profit
2020	20	80	20	72	8	8
2021	24	96	25	90	12	6
2022	25	100	25	90	16	10
2023	31	124	30	108	28	16

41. D

In the year 2021, the % increase in sales is $16/80 * 100 = 20\%$; in 2022, it is $4/96 * 100$ [less than 5%], whereas in the year 2023, the %change in sales is $24/100 * 100 = 24\%$

=> 2023 has the highest % increase in sales.

42. D

The average profit for the 4 years = $(8 + 6 + 10 + 16)/4 = 10$.

43. **A**

The profit per rupee of equity calculation is as follows:

In 2020: $8/8 = 1$

In 2021: $6/12 = 0.5$

In 2022: $10/16 = 0.62$

In 2023: $16/28 = 0.57$

=> In 2020, it is the highest.

44. **A**

The sales per rupee of expenditure calculation is as follows:

In 2020: $80/72 = 1.111$

In 2021: $96/90 = 1.066$

In 2022: $100/90 = 1.111$

In 2023: $124/108 = 1.15$

=> In 2021, it is the lowest of the above values.

50. **B**

Company Name	Change From Previous Year (Year Wise)					Net Change
	2018-19	2019-20	2020-21	2021-22	2022-23	(2017 - 2023)
Company A	-12.5	+50	-25	-12.5	+25	+25
Company B	+5	+5	+5	+5	+5	+25
Company C	-12.5	+12.5	+22.5	-22.5	-12.5	-12.5
Company D	+25	0	-22.5	+7.5	+2.5	+12.5

From the table, we can see that in the year 2018-2019, Company D shows $(25/135) \times 100\% = 18.52\%$ increase in market value, which is higher than any other changes.

The correct option is B

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

51. **C**

Company Name	Change From Previous Year (Year Wise)					Net Change
	2018-19	2019-20	2020-21	2021-22	2022-23	(2017 - 2023)
Company A	-12.5	+50	-25	-12.5	+25	+25
Company B	+5	+5	+5	+5	+5	+25
Company C	-12.5	+12.5	+22.5	-22.5	-12.5	-12.5
Company D	+25	0	-22.5	+7.5	+2.5	+12.5

From the table, we can see that in the year 2018-2019, Company D shows $(25/135) \times 100\% = 18.52\%$ increase in market value, which is higher than any other changes.

The correct option is C

52. C

The absolute change in the market value (year wise) are given in the table below:

Company Name	Absolute Change From Previous Year (Year Wise)				
	2018-19	2019-20	2020-21	2021-22	2022-23
Company A	12.5	50	25	12.5	25
Company B	5	5	5	5	5
Company C	12.5	12.5	22.5	22.5	12.5
Company D	25	0	22.5	7.5	2.5

From the table, we can see that the greatest absolute change in market share occurred for Company A in the year 2019-20

Hence, the correct option is C

53. B

It is given that the ratio of the students in institution A to that of institution B is 7 : 8, which implies if the students in institution A is $7x$, then the students in institution B is $8x$.

It is also known that the total number of students in both institutions are 1350.

$$\Rightarrow (7x+8x) = 1350 \Rightarrow x = 90$$

Thus, the students in institution A is $(7 \times 90) = 630$, and the students in institution B is $(8 \times 90) = 720$

It is given that In institution A, 70% students are boys and the rest are girls, whereas in institution B the ratio of boys to girls is 11 : 7.

Thus, the number of boys in institution A = $(70\% \text{ of } 630) = 441$, and the number of girls in institution A = $(630 - 441) = 189$.

Similarly, the number of boys in institution B = $(11/18) \times 720 = 440$, and the number of girls in institution B = $(720 - 440) = 280$

It is given that there are only three classes in each Institution, Class X, Class Y and Class Z.

It is known that in institution A, $(4/7)$ th of the total girls joined Class Y, which implies the total number of girls at Class Y in institution A is $(4/7)*189 = 108$, which implies the remaining number of girls = $(189-108) = 81$. It is also known that $(5/9)$ th of the remaining girls enrolled in Class Z and rest in Class X.

Thus, the total number of girls at Class Z in institution A is $(5/9)*81 = 45 \Rightarrow$ the total number of girls at Class X in institution A is $(81-45) = 36$

Now, in institution A, the total number of boys at Class X = $(3/7)*441 = 189$, which implies the number of boys who are remaining is $(441-189) = 252$

It is given that $(4/9)$ of the remaining boys are in Class Y = $(4/9)*252 = 112$, and the boys in class Z in institution A = $(252-112) = 140$

Now, in Institution B, $(4/11)$ th of the boys are in Class Y = $(4/11)*440 = 160$, and the number of boys in Class Z is $(21/20)*160 = 168$, which means the number of boys in Class X = $(440-160-168) = 112$

Similarly, $(1/4)$ th of the girls are in Class Z = $(1/4)*280 = 70$, and it is given that the number of girls enrolled in class X is 10% more than the girls enrolled in class Y.

Let the number of girls in Class Y be $100x$, which implies the number of girls in Class X is $110x$

Thus, $(110x+100x) = 210 \Rightarrow x = 1 \Rightarrow$ The number of girls in Class Y is 100, and the number of girls in Class X is 110

We know that the number of boys enrolled in class X in institution A is 189, and the number of girls enrolled in class Y in institution B = 100

Thus, the number of boys enrolled in class X in institution A is 89% more than the number of girls enrolled in class Y in institution B.

The correct option is B

54. C

It is given that the ratio of the students in institution A to that of institution B is 7 : 8, which implies if the students in institution A is $7x$, then the students in institution B is $8x$.

It is also known that the total number of students in both institutions are 1350.

$\Rightarrow (7x+8x) = 1350 \Rightarrow x = 90$

Thus, the students in institution A is $(7*90) = 630$, and the students in institution B is $(8*90) = 720$

It is given that In institution A, 70% students are boys and the rest are girls, whereas in institution B the ratio of boys to girls is 11 : 7.

Thus, the number of boys in institution A = $(70\% \text{ of } 630) = 441$, and the number of girls in institution A = $(630-441) = 189$.

Similarly, the number of boys in institution B = $(11/18)*720 = 440$, and the number of girls in institution B = $(720-440) = 280$

It is given that there are only three classes in each Institution, Class X, Class Y and Class Z.

It is known that in institution A, $(4/7)$ th of the total girls joined Class Y, which implies the total number of girls at Class Y in institution A is $(4/7)*189 = 108$, which implies the remaining number of girls = $(189-108) = 81$. It is also known that $(5/9)$ th of the remaining girls enrolled in Class Z and rest in Class X.

Thus, the total number of girls at Class Z in institution A is $(5/9)*81 = 45 \Rightarrow$ the total number of girls at Class X in institution A is $(81-45) = 36$

Now, in institution A, the total number of boys at Class X = $(3/7)*441 = 189$, which implies the number of boys who are remaining is $(441-189) = 252$

It is given that $(4/9)$ of the remaining boys are in Class Y = $(4/9)*252 = 112$, and the boys in class Z in institution A = $(252-112) = 140$

Now, in Institution B, $(4/11)$ th of the boys are in Class Y = $(4/11)*440 = 160$, and the number of boys in Class Z is $(21/20)*160 = 168$, which means the number of boys in Class X = $(440-160-168) = 112$

Similarly, $(1/4)$ th of the girls are in Class Z = $(1/4)*280 = 70$, and it is given that the number of girls enrolled in class X is 10% more than the girls enrolled in class Y.

Let the number of girls in Class Y be $100x$, which implies the number of girls in Class X is $110x$

Thus, $(110x+100x) = 210 \Rightarrow x = 1 \Rightarrow$ The number of girls in Class Y is 100, and the number of girls in Class X is 110

Hence, the total number of students enrolled in class Y of both institutions = (number of boys in class Y in both institutions) + (number of girls in Class Y in both institutions)

$\Rightarrow (112+160)+(108+100) = 480$

The correct option is C

55. **D**

It is given that the ratio of the students in institution A to that of institution B is 7 : 8, which implies if the students in institution A is $7x$, then the students in institution B is $8x$.

It is also known that the total number of students in both institutions are 1350.

$\Rightarrow (7x+8x) = 1350 \Rightarrow x = 90$

Thus, the students in institution A is $(7*90) = 630$, and the students in institution B is $(8*90) = 720$

It is given that In institution A, 70% students are boys and the rest are girls, whereas in institution B the ratio of boys to girls is 11 : 7.

Thus, the number of boys in institution A = (70% of 630) = 441, and the number of girls in institution A = $(630-441) = 189$.

Similarly, the number of boys in institution B = $(11/18)*720 = 440$, and the number of girls in institution B = $(720-440) = 280$

It is given that there are only three classes in each Institution, Class X, Class Y and Class Z.

It is known that in institution A, $(4/7)$ th of the total girls joined Class Y, which implies the total number of girls at Class Y in institution A is $(4/7)*189 = 108$, which implies the remaining number of girls = $(189-108) = 81$. It is also known that $(5/9)$ th of the remaining girls enrolled in Class Z and rest in Class X.

Thus, the total number of girls at Class Z in institution A is $(5/9)*81 = 45 \Rightarrow$ the total number of girls at Class X in institution A is $(81-45) = 36$

Now, in institution A, the total number of boys at Class X = $(3/7)*441 = 189$, which implies the number of boys who are remaining is $(441-189) = 252$

It is given that $(4/9)$ of the remaining boys are in Class Y = $(4/9)*252 = 112$, and the boys in class Z in institution A = $(252-112) = 140$

Now, in Institution B, $(4/11)$ th of the boys are in Class Y = $(4/11)*440 = 160$, and the number of boys in Class Z is $(21/20)*160 = 168$, which means the number of boys in Class X = $(440-160-168) = 112$

Similarly, $(1/4)$ th of the girls are in Class Z = $(1/4)*280 = 70$, and it is given that the number of girls enrolled in class X is 10% more than the girls enrolled in class Y.

Let the number of girls in Class Y be $100x$, which implies the number of girls in Class X is $110x$

Thus, $(110x+100x) = 210 \Rightarrow x = 1 \Rightarrow$ The number of girls in Class Y is 100, and the number of girls in Class X is 110

Therefore, the number of boys enrolled in Class Y in institution B = 160, and the number of girls enrolled in Class X in institution A = 36.

Hence, the difference is $(160-36) = 124$

The correct option is D

56. A

It is given that the ratio of the students in institution A to that of institution B is 7 : 8, which implies if the students in institution A is $7x$, then the students in institution B is $8x$.

It is also known that the total number of students in both institutions are 1350.

$$\Rightarrow (7x+8x) = 1350 \Rightarrow x = 90$$

Thus, the students in institution A is $(7 \times 90) = 630$, and the students in institution B is $(8 \times 90) = 720$

It is given that In institution A, 70% students are boys and the rest are girls, whereas in institution B the ratio of boys to girls is 11 : 7.

Thus, the number of boys in institution A = (70% of 630) = 441, and the number of girls in institution A = $(630 - 441) = 189$.

Similarly, the number of boys in institution B = $(11/18) \times 720 = 440$, and the number of girls in institution B = $(720 - 440) = 280$

It is given that there are only three classes in each Institution, Class X, Class Y and Class Z.

It is known that in institution A, $(4/7)$ th of the total girls joined Class Y, which implies the total number of girls at Class Y in institution A is $(4/7) \times 189 = 108$, which implies the remaining number of girls = $(189 - 108) = 81$. It is also known that $(5/9)$ th of the remaining girls enrolled in Class Z and rest in Class X.

Thus, the total number of girls at Class Z in institution A is $(5/9) \times 81 = 45 \Rightarrow$ the total number of girls at Class X in institution A is $(81 - 45) = 36$

Now, in institution A, the total number of boys at Class X = $(3/7) \times 441 = 189$, which implies the number of boys who are remaining is $(441 - 189) = 252$

It is given that $(4/9)$ of the remaining boys are in Class Y = $(4/9) \times 252 = 112$, and the boys in class Z in institution A = $(252 - 112) = 140$

Now, in Institution B, $(4/11)$ th of the boys are in Class Y = $(4/11) \times 440 = 160$, and the number of boys in Class Z is $(21/20) \times 160 = 168$, which means the number of boys in Class X = $(440 - 160 - 168) = 112$

Similarly, $(1/4)$ th of the girls are in Class Z = $(1/4) \times 280 = 70$, and it is given that the number of girls enrolled in class X is 10% more than the girls enrolled in class Y.

Let the number of girls in Class Y be $100x$, which implies the number of girls in Class X is $110x$

Thus, $(110x + 100x) = 210 \Rightarrow x = 1 \Rightarrow$ The number of girls in Class Y is 100, and the number of girls in Class X is 110

Hence, the total number of boys enrolled in classes X and Y in institution A = $(189 + 112) = 301$, and the number of girls enrolled in classes Y and Z in institution B = $(100 + 70) = 170$

Therefore, the total number of boys enrolled in classes X and Y in institution A is $(301/170) \times 100\% = 177\%$

The correct option is A

57. D

In the above given bar graphs the population and national income of a country from the fiscal years 2014-15 to 2019-20 are shown.

Let us tabulate the above information from the graph into a table and also calculate per capita income for all the fiscal years.

Fiscal Year	National Income (In crores)	Population (In crores)	Per Capita income (in rupees) approx
2014-2015	343837.5	111	3098
2015-2016	391761	112.5	3482
2016-2017	437334	115.5	3786
2017-2018	494901	117.25	4221
2018-2019	582808.5	120	4857
2019-2020	650250	122.25	5319

On the basis of the above table

We need to find the year the increase in per capita income compared to the previous years is the lowest.

Let us check for each option and calculate the increase in per capita income compared to previous years for the following fiscal years.

Option A) 2015-2016

The difference in per capita income for years 2015-2016 and 2014-2015 is approximately equal to $3482 - 3098 = 384$

Option B) 2019-2020

The difference in per capita income for years 2019-2020 and 2018-2019 is approximately equal to $5319 - 4857 = 462$

Option C) 2017-2018

The difference in per capita income for years 2017-2018 and 2016-2017 is approximately equal to $4221 - 3786 = 435$

Option D) 2016-2017

The difference in per capita income for years 2016-2017 and 2015-2016 is approximately equal to $3786 - 3482 = 304$

Hence, the lowest increase in per capita income compared to previous year is in the fiscal year 2016-2017.

(Option D)

58. D

In the above given bar graphs the population and national income of a country from the fiscal years 2014-15 to 2019-20 are shown.

Let us tabulate the above information from the graph into a table and also calculate per capita income for all the fiscal years.

Fiscal Year	National Income (In crores)	Population (In crores)	Per Capita income (in rupees) approx
2014-2015	343837.5	111	3098
2015-2016	391761	112.5	3482
2016-2017	437334	115.5	3786
2017-2018	494901	117.25	4221
2018-2019	582808.5	120	4857
2019-2020	650250	122.25	5319

On the basis of the above table

We need to find the year in which the difference between the percentage increase in per capital income and the percentage increase in population compared to the previous year the highest.

Let us check for each option and calculate the difference of % increase in per capita income and % increase in population compared to previous years for the following fiscal years.

Option A) 2017-2018

The % increase in per capita income in the year 2017-2018 as compared to 2016-2017 is

$$\Rightarrow (4221-3786)/3786 = 11.49\%$$

The % increase in population in the year 2017-2018 as compared to 2016-2017 is

$$\Rightarrow (117.25-115.5)/115.5 = 1.52\%$$

Thus, the difference between them = $11.49 - 1.52 = 9.97$

Option B) 2015-2016

The % increase in per capita income in the year 2015-2016 as compared to 2014-2015 is

$$\Rightarrow (3482-3098)/3098 = 12.40\%$$

The % increase in population in the year 2015-2016 as compared to 2014-2015 is

$$\Rightarrow (112.5-111)/111 = 1.35\%$$

Thus, the difference between them = $12.40 - 1.35 = 11.05$

Option C) 2016-2017

The % increase in per capita income in the year 2016-2017 as compared to 2015-2016 is

$$\Rightarrow (3786-3482)/3482 = 8.73\%$$

The % increase in population in the year 2016-2017 as compared to 2015-2016 is

$$\Rightarrow (115.5-112.5)/112.5 = 2.66\%$$

Thus, the difference between them = $8.73 - 2.66 = 6.07$

Option D) 2018-2019

The % increase in per capita income in the year 2018-2019 as compared to 2017-2018 is

$$\Rightarrow (4857-4221)/4221 = 15.06\%$$

The % increase in population in the year 2018-2019 as compared to 2017-2018 is

$$\Rightarrow (120-117.25)/117.25 = 2.34\%$$

Thus, the difference between them = $15.06 - 2.34 = 12.72$

Thus, the difference between the percentage increase in per capital income and the percentage increase in population compared to the previous year the highest for the year 2018-2019. (Option D)

59. B

In the above given bar graphs the population and national income of a country from the fiscal years 2014-15 to 2019-20 are shown.

Let us tabulate the above information from the graph into a table and also calculate per capita income for all the fiscal years.

Fiscal Year	National Income (In crores)	Population (In crores)	Per Capita income (in rupees) approx
2014-2015	343837.5	111	3098
2015-2016	391761	112.5	3482
2016-2017	437334	115.5	3786
2017-2018	494901	117.25	4221
2018-2019	582808.5	120	4857
2019-2020	650250	122.25	5319

On the basis of the above table

We see that per capita income is highest for the year 2019-2020. (Option B is the correct answer.)

60. D

In the above given bar graphs the population and national income of a country from the fiscal years 2014-15 to 2019-20 are shown.

Let us tabulate the above information from the graph into a table and also calculate per capita income for all the fiscal years.

Fiscal Year	National Income (In crores)	Population (In crores)	Per Capita income (in rupees) approx
2014-2015	343837.5	111	3098
2015-2016	391761	112.5	3482
2016-2017	437334	115.5	3786
2017-2018	494901	117.25	4221
2018-2019	582808.5	120	4857
2019-2020	650250	122.25	5319

On the basis of the above table

We need to find the year which witnessed the highest increase in per capita income compared to the previous year.

Let us check for each option and calculate the increase in per capita income compared to previous years for the following fiscal years.

Option A) 2016-2017

The difference in per capita income for years 2016-2017 and 2015-2016 is approximately equal to $3786 - 3482 = 304$

Option B) 2017-2018

The difference in per capita income for years 2017-2018 and 2016-2017 is approximately equal to $4221 - 3786 = 435$

Option C) 2015-2016

The difference in per capita income for years 2015-2016 and 2014-2015 is approximately equal to $3482 - 3098 = 384$

Option D) 2018-2019

The difference in per capita income for years 2018-2019 and 2017-2018 is approximately equal to $4857 - 4221 = 636$

Hence, the highest increase in per capita income compared to previous year is in the fiscal year 2018-2019. (Option D)

61. B

First, let us note down the table and find out the sum of the costs across the rows and columns:

		2020	2021	2022	2023	Total
	Graphing	62.3	11.3	3.3	0.8	77.7
	Bolster	0	142.5	120	112.5	375
	Brace	0	105	67.5	90	262.5
	Slabs	0	22.5	18	24	64.5
	Other Material	0	37.5	27	31.5	96
	Labour	3.2	37.5	30	27	97.7
	Management	11.3	22.5	22.5	21	77.3
	Exigencies	1.5	22.5	6.3	7.5	37.8
Total		78.3	401.3	294.6	314.3	1088.5

If the exigencies double, the expense increases by 37.8 => The required % increase in expenses = $37.8/1088.5 \times 100 = 3.4726$ [Option-B]

62.A

First, let us note down the table and find out the sum of the costs across the rows and columns:

						Total
		2020	2021	2022	2023	
	Graphing	62.3	11.3	3.3	0.8	77.7
	Bolster	0	142.5	120	112.5	375
	Brace	0	105	67.5	90	262.5
	Slabs	0	22.5	18	24	64.5
	Other Material	0	37.5	27	31.5	96
	Labour	3.2	37.5	30	27	97.7
	Management	11.3	22.5	22.5	21	77.3
	Exigencies	1.5	22.5	6.3	7.5	37.8
Total		78.3	401.3	294.6	314.3	1088.5

For the budget to be below 1050 lakhs, we must reduce the management budget by $1088.5 - 1050 = 38.5 \Rightarrow 9.625$ per year.

In the year 2021, the % decrease = $9.625/22.5 \times 100 = 42.777\% = 42.78\%$ [Option-A]

63.D

First, let us note down the table and find out the sum of the costs across the rows and columns:

						Total
		2020	2021	2022	2023	
	Graphing	62.3	11.3	3.3	0.8	77.7
	Bolster	0	142.5	120	112.5	375
	Brace	0	105	67.5	90	262.5
	Slabs	0	22.5	18	24	64.5
	Other Material	0	37.5	27	31.5	96
	Labour	3.2	37.5	30	27	97.7
	Management	11.3	22.5	22.5	21	77.3
	Exigencies	1.5	22.5	6.3	7.5	37.8
Total		78.3	401.3	294.6	314.3	1088.5

The cost of materials increases by 5% each year from 2022 onwards:

=> We need to consider the costs of Bolster, Brace, Slabs and the other materials.

=> The increase in over cost is 5% of $[120 + 67.5 + 18 + 27 + 112.5 + 90 + 24 + 31.5] = 24.525$ [close to option-D]

64. **B**

First, let us note down the table and find out the sum of the costs across the rows and columns:

		2020	2021	2022	2023	Total
	Graphing	62.3	11.3	3.3	0.8	77.7
	Bolster	0	142.5	120	112.5	375
	Brace	0	105	67.5	90	262.5
	Slabs	0	22.5	18	24	64.5
	Other Material	0	37.5	27	31.5	96
	Labour	3.2	37.5	30	27	97.7
	Management	11.3	22.5	22.5	21	77.3
	Exigencies	1.5	22.5	6.3	7.5	37.8
	Total	78.3	401.3	294.6	314.3	1088.5

The total cost of materials and labour for the four years = $375 + 262.5 + 64.5 + 96 + 97.7 = 897.5$

By the third year, the cost = $897.5 - 112.5 - 90 - 24 - 31.5 - 27 = 612.5$

=> The % of project completed = $612.5/897.5 = 0.682$ [Option-B]

Explanation [65 - 68]:

In the given pie charts, the percentage of revenue generated in four quarters of the year 2020 for a company is given.

The total revenue generated by the company was 225 million rupees in the year 2020. So, we have tabulated the revenue generated by the company in each quarter below.

Also, the second pie chart shows the profit as a percentage of revenue generated for that respective quarter in 2020.

We have tabulated the profit generated by the company in each quarter below-

Quarter	Revenue (%)	Revenue (million rupees)	Profit (%)	Profit (million rupees)
1	31	69.75	25	17.43
2	35	78.75	11	8.66
3	15	33.75	35	11.81
4	19	42.75	29	12.39

Now, on the basis of the information filled in the above table-

65. **B**

The profit was maximum in the first quarter. (Option B)

66. **A**

-

The average of profit (in million rupees generated in the 1st and 4th quarters is equal to $(17.43+12.39)/2 = 14.91$ million rupees (Option A)

67. **B**

le-

The profit (in rupees) of the company in the 2nd quarter of the year 2020 is equal to 8.66 million rupees (Option B)

68. **B**

le-

If x is the profit generated in the 1st and 2nd quarters and y is the profit generated in the 3rd and 4th quarters,

The value of x = $17.43+8.6 = 26.09$

The value of y = $11.81+12.39 = 24.20$

Hence, $x > y$ (Option B is the correct answer.)

69. **C**

Marks obtained by Sumit in Hindi, English and Maths = $75+85+75 = 235$

These marks were obtained out of $120+130+150 = 400$

Giving the percentage marks obtained by Sumit to be $\frac{235}{400} \times 100$

Marks obtained by Sandhya in Hindi, English and Maths = $85+110+120 = 315$

Giving the percentage marks obtained by Sandhya to be $\frac{315}{400} \times 100$

This would give their ratio to be, $\frac{235}{400} \times 100 : \frac{315}{400} \times 100$

235 : 315

47:63

Therefore, Option C is the correct answer.

70. **C**

Marks obtained by Lokesh and Sumit in Hindi, English and Maths = $(55+115+60) + (75+85+75) = 465$

Marks obtained by Aman and Kartik in Economy, Accountancy and Geography would be $(100+120+90) + (95+100+80) = 585$

We are to find out what percentage of the second number is approximately the first number.

We calculate this using $\frac{465}{585} \times 100 = \frac{31}{39} \times 100$

The denominator is very close to 40, approximating the denominator to be 40; we get the percentage value to be 77.5%

Since we have approximated up the denominator, the value which we have gotten is actually smaller than the real value. Therefore, the real value would be a little higher than 77.5%

Of the given options, only 78.8% satisfy our requirements.

Therefore, Option C is the correct answer.

SRCC GBO Cracku's WhatsApp Group

Join Now

71. **D**

Total marks obtained by Aman in all subjects: $95+65+115+100+125+90 = 590$

Total marks obtained by Kartik in all subjects: $60+95+130+95+100+80 = 560$

Total marks obtained by Mukesh in all subjects: $105+90+95+110+140+85 = 625$

Total marks obtained by Lokesh in all subjects: $55+115+60+65+75+70 = 440$

The average of these total marks would then be $\frac{590+560+625+440}{4} = \frac{2215}{4} = 553.75$

Therefore, Option D is the correct answer.

72. **D**

Total marks obtained by Sumit in all subjects: $75+85+75+80+95+75 = 485$

Total marks obtained by Mukesh in all subjects: $105+90+95+110+140+85 = 625$

The difference between these two would be $|625 - 485| = 140$

Therefore, Option D is the correct answer.

73. **A**

Total runs scored by X in the given six years: $470+510+780+525+880+450 = 3615$

Total runs scored by Z in the given six years: $310+980+450+795+220+690 = 3445$

Giving the ratio of the two to be 3615:3445, which is 723:689

Therefore, Option A is the correct answer.

 VIDEO SOLUTION

74. **A**

The total runs scored by the three players in the following years would be

$$2018: 310+470+670 = 1450$$

$$2020: 230+450+780 = 1460$$

$$2023: 450+690+840 = 1980$$

$$2019: 290+510+980 = 1780$$

The lowest total runs were scored in the year 2018.

Therefore, Option A is the correct answer,

 VIDEO SOLUTION

75. **D**

Total runs scored by X from the year 2020 to the year 2023 would be $780+525+880+450 = 2635$

Total runs scored by Z from the year 2018 to the year 2021 would be $310+980+450+795 = 2535$

Giving the difference between the two scores to be $|2635 - 2535| = 100$

Therefore, Option D is the correct answer.

 VIDEO SOLUTION

TAKE FREE SRCC GBO MOCK TEST
WITH DETAILED SOLUTIONS AND ANALYSIS

76. **C**

The total runs scored by the three batsmen in the year 2021 would be $525+795+1170 = 2490$

Giving the average of the runs scored to be $\frac{2490}{3} = 830$

Therefore, Option C is the correct answer.

 VIDEO SOLUTION

77. **A**

The total revenue generated by companies A, B and C in the year 2015 would be $455+210+325 = 990$ million

Giving the average to be $\frac{990}{3} = 330$ million

Therefore, Option A is the correct answer.

78. **D**

Total Revenue generated by company A in the five years would be: $455+225+305+340+440 = 1,765$

Total Revenue generated by company B in the five years would be $210+245+350+280+320 = 1,405$

The ratio of these two value would be 1765:1405, which is 353:281

Therefore, Option B is the correct answer.

79. **C**

Revenue generated by companies A and B in the year 2016: $225+245= 470$

Revenue generated by companies B and C in the year 2018: $280+310 = 590$

We are asked that first number is what percentage of the second number; this can be calculated by $\frac{47}{59} \times 100$

Here, the denominator is very close to 60. Approximating the value of the denominator to 60, we get the percentage value to be 78.33%

Since we have approximated up the value of the denominator, the percentage value would be a little higher than 78.33%

Of the given options, 79.66% is the only number that would satisfy our requirements.

Therefore, Option C is the correct answer.

80. **C**

Revenue generated by company A in the year 2019 is given to be 440 million

Revenue generated by company B in the year 2018 is given to be 280 million

And finally, Revenue generated by company C in the year 2016 is given to be 450 million

Adding them up and dividing by 3 in order to get the average, we get $\frac{440+280+450}{3} = \frac{1170}{3} = 390$

Therefore, Option C is the correct answer.

Quantitative Ability

81. **A**

Join the points O and P, the slope of this line is $1/2$. Join the points O and Q, the slope of this line is -2 . The product of slopes of two perpendicular lines will be -1 . These two lines are perpendicular. The point R lies on OP and S on OQ. Since these two lines are perpendicular, the line joining R and S will be the hypotenuse. So it is $\sqrt{30^2 + 40^2} = 50$.

82. **D**

Option B and D are both correct. The sum of interior and exterior angles is 180. Since the ratio is 9:2, let the exterior angle be $9x$, and the interior angle be $2x$.

$$11x = 180$$

$$x = \frac{180}{11}$$

The exterior angle of a regular polygon is $360/n$. The derived exterior angle from the x value is $360/11$.

So, the n value is 11.

So option B, D are correct.

84. **A**

In this question, we need to check with each option.

A) If $1/6$ part of the mixture is replaced with water.

The initial part of the water is $3/8$, and that of milk is $5/8$. When $1/6$ of the mixture is replaced with water, the milk taken out will be added as water. $\frac{1}{6} \cdot \frac{5}{8} = \frac{5}{48}$ is the amount of milk that is taken out, and that will also be the amount of water added.

So, the new ratio will be $\frac{x}{y} = \frac{(\frac{3}{8} + \frac{5}{48})}{\frac{5}{8} - \frac{5}{48}} = \frac{23}{25}$. But in the option it is given that $x > y$. So, it is the incorrect option.

B) If $\frac{1}{5}$, part of the mixture is replaced with water.

The initial part of the water is $3/8$, and that of milk is $5/8$. When $1/5$ of the mixture is replaced with water, the milk taken out will be added as water. $\frac{1}{5} \cdot \frac{5}{8} = \frac{1}{8}$ is the amount of milk that is taken out, and that will also be the amount of water added.

So, the new ratio will be $\frac{x}{y} = \frac{(\frac{3}{8} + \frac{1}{8})}{\frac{5}{8} - \frac{1}{8}} = \frac{(\frac{4}{8})}{(\frac{4}{8})} = 1 : 1$. In the option it is given that $x = y$. So, it is a correct option.

C) If $\frac{1}{7}$, part of the mixture is replaced with water.

The initial part of the water is $\frac{3}{8}$, and that of milk is $\frac{5}{8}$. When $\frac{1}{7}$ of the mixture is replaced with water, the milk taken out will be added as water. $\frac{1}{7} \cdot \frac{5}{8} = \frac{5}{56}$ is the amount of milk that is taken out, and that will also be the amount of water added.

So, the new ratio will be $\frac{x}{y} = \frac{\left(\frac{3}{8} + \frac{5}{56}\right)}{\frac{5}{8} - \frac{5}{56}} = \frac{26}{30}$. In the option it is given that $x > y$. So, it is a correct option.

D) If $\frac{1}{4}$, part of the mixture is replaced with water.

The initial part of the water is $\frac{3}{8}$, and that of milk is $\frac{5}{8}$. When $\frac{1}{4}$ of the mixture is replaced with water, the milk taken out will be added as water. $\frac{1}{4} \cdot \frac{5}{8} = \frac{5}{32}$ is the amount of milk that is taken out, and that will also be the amount of water added.

So, the new ratio will be $\frac{x}{y} = \frac{\left(\frac{3}{8} + \frac{5}{32}\right)}{\frac{5}{8} - \frac{5}{32}} = \frac{17}{15}$. In the option it is given that $x > y$. So, it is a correct option.

85. D

$$\log_{10} 50 + \left(\frac{\log_{0.5} 5}{1 + \log_2 5} \right)$$

$\log_{0.5} 5$ can be written as $\frac{\log_2 5}{\log_2 0.5}$

It becomes $-\log_2 5$ as $\log_2 0.5$ is -1.

$1 + \log_2 5$ will be $\log_2 10$ since 1 can be written as $\log_2 2$.

After these calculations $\left(\frac{\log_{0.5} 5}{1 + \log_2 5} \right)$ will turn into $-\frac{\log_2 5}{\log_2 10}$ which is $-\log_{10} 5$

Now we have $\log_{10} 50 - \log_{10} 5$ which is nothing but $\log_{10} 10$. So the answer is 1.

86. B

i) When a number has to be divisible by 52, basically it has to be divisible by 4 and 13.

Taking 2^{10} common from the expression $2^{10} * (2^{10} + 3^{10})$. 2^{10} is divisible by 4 but not by 13.

So let's check if $2^{10} + 3^{10}$ is divisible by 13.

Remainder of 2^{10} when divided by 13.

$$2^{10} = 2^5 \cdot 2^5$$

$$2^5 \% 13 = 32 \% 13 = 6$$

$$2^{10} = 2^5 \cdot 2^5 = (13k + 6) \cdot (13k + 6) = 13K + 36 = 13K + 10$$

So the remainder is 10.

Remainder of 3^{10} when divided by 13.

$$3^{10} = 3^5 \cdot 3^5$$

$$3^5 \% 13 = 243 \% 13 = 9$$

$$3^{10} = 3^5 \cdot 3^5 = (13k + 9) \cdot (13k + 9) = 13K + 81 = 13K + 3$$

The remainder of $2^{10} + 3^{10}$ when divided by 13 = $10 + 3 = 13$, so it is divisible by 13.

ii. $7^{15} + 64^5$ is divisible by 11.

Check for $7^3 \% 11$

$$343 \% 11 = 2$$

$$7^{15} = (7^3)^5 = (11k + 2)^5 = 11K + 32 = 11K + 10$$

This gives the remainder 10.

Remainder of $64^5 \% 11$

$$\text{This is same as } (2^6)^5 \% 11 = 2^{30} \% 11$$

$$2^{10} \% 11 = 1024 \% 11 = 1$$

$$2^{30} \% 11 = (2^{10})^3 \% 11 = 1^3 \% 11$$

This gives the remainder 1.

$$(7^{15} + 64^5) \% 11 = (10 + 1) \% 11 = 0$$

So, it is divisible by 11.

III. $2^{20} - 49^{10}$ is divisible by 9.

Re-write it as $(2^{10})^2 - (7^{10})^2$

It is in the form of $a^2 - b^2 = (a + b) \cdot (a - b)$.

$$(2^{10} + 7^{10}) \cdot (2^{10} - 7^{10})$$

Apply the same for $(2^{10} - 7^{10})$

$$(2^5 + 7^5) \cdot (2^5 - 7^5) \cdot (2^{10} + 7^{10})$$

Now, check each of the terms to see if they are divisible by 9. If atleast one is divisible, then the whole term is divisible by 9.

Check $(2^5 + 7^5)$

$$(32 + 343 \cdot 49) \% 9$$

$$(9k_1 + 5 + (9k_2 + 1) \cdot (9k_3 + 4)) \% 9$$

where k_1, k_2, k_3 are constant

$$(9k_1 + 5 + (9k_4 + 4)) \% 9$$

$$(9K + 5 + 4) \% 9$$

$$(9K + 9) \% 9$$

Since this term is divisible by 9, statement 3 is true.

IV. $3^{15} - 8^5$ is divisible by 5.

$$3^{15} - 8^5 = 3^{15} - 2^{15}$$

Rewriting it as $(3^5)^3 - (2^5)^3$

This is in the form $a^3 - b^3 = (a - b) \cdot (a^2 + b^2 + a \cdot b)$

$$(3^5 - 2^5) \cdot (3^{10} + 2^{10} + 6^5)$$

$$(243 - 32) \cdot (243 \cdot 243 + 32 \cdot 32 + 6^5)$$

$$(211) \cdot (243 \cdot 243 + 32 \cdot 32 + 6^5)$$

When divided by 5, the remainder will depend on the unit digit. If it is below 5, that will be the remainder. If it is above 5, subtract the number from 5, the result will be the remainder.

$$(1) \cdot (3 \cdot 3 + 2 \cdot 2 + 1) = (1) \cdot (9 + 4 + 1)$$

Any power of six will have the unit digit as 6; hence, the remainder will be 1.

$14\%5=4.$

So, the number will not be divisible by 5.

Hence option B is correct.

SRCC GBO CRASH COURSE

USE COUPON CODE **SRCCGBO** TO GET AN INSTANT DISCOUNT OF ₹500.

87. **A**

Convert the ratio into integers by multiplying it by the LCM of denominators; now, the ratio becomes 40:105:36.

Let the shares held by A, B, and C be $40x$, $105x$, and $36x$, respectively.

A, B and C hold shares for one year. Other than that, A holds 108.75% more than he holds, which is $43.5x$ more from the 5th month.

Now multiply shares, and the time each one holds equates to 17208.

$$40x \cdot 12 + 105x \cdot 12 + 36x \cdot 12 + 43.5x \cdot 8 = 2540 \cdot x$$

$$2540x = 17208$$

$$x = \frac{17208}{2504}$$

$$\text{B's share is } 105x \cdot 12 = \frac{17208}{2504}$$

This is 8604

88. **A**

Let the cost price of an article be C . Given the profit percentage is 25%. The selling price of the article will be $1.25C$. Given that the cost price of 25 articles is equal to the selling price of m articles, let's frame an equation from this.

$$25 \cdot C = m \cdot 1.25 C \Rightarrow m = 20$$

89. **C**

This is a concept of weighted average; assuming that there are equal men and women, the average would be 1150. But since there are more men, the average is more than 1150. Also, the average can't go beyond 1300 and below 1000. So, option C is the

90. **B**

$$\text{Sum to } n \text{ terms in GP is } a \cdot \frac{(r^n - 1)}{r - 1}$$

The sum of the first 18 terms is equal to 22 terms.

$$\text{So } a \cdot \frac{(r^{18} - 1)}{r - 1} = a \cdot \frac{(r^{22} - 1)}{r - 1}$$

$$\text{This will be reduced to } (r^{18} - 1) = r^{22} - 1$$

$$\text{Reducing this we get } r^4 = 1$$

Now r has 4 possibilities 1, -1, i , $-i$.

1 is impossible as that would lead to a zero denominator in the sum of terms formulae.

In all the other cases of r , the sum of the first four values would be zero.

91. **A**

$$\frac{x^{\frac{1}{2}} + x^{-\frac{1}{2}}}{1 - x} + \frac{1 - x^{-\frac{1}{2}}}{1 - \sqrt{x}}$$

$$\frac{(\sqrt{x} + \frac{1}{\sqrt{x}})}{1 - x} + \frac{(1 - \frac{1}{\sqrt{x}})}{1 - \sqrt{x}}$$

$$\frac{1}{\sqrt{x}} \cdot \frac{(x+1)}{1-x} + \left(\frac{1}{\sqrt{x}} \cdot \frac{(\sqrt{x}-1)}{1-\sqrt{x}} \right)$$

$$\left(\frac{1}{\sqrt{x}} \cdot \frac{x+1}{1-x} \right) - \frac{1}{\sqrt{x}}$$

$$\frac{1}{\sqrt{x}} \cdot \left(\frac{(x+1)}{1-x} - 1 \right)$$

$$\frac{1}{\sqrt{x}} \cdot \frac{(x+1-1+x)}{1-x}$$

$$\frac{1}{\sqrt{x}} \cdot \frac{2x}{1-x}$$

$$2 \frac{\sqrt{x}}{1-x}$$

Substitute 7 in place of x.

$$2 \frac{\sqrt{7}}{1-7}$$

That will be $-\frac{\sqrt{7}}{3}$

92. **A**

Let us find out how many subsets of B are subsets of A. For this, we must find A and B's intersection, {6,12}. The number of subsets of this set is $2^2 = 4$. Now, find the total subsets of B.

2^n where n is no. of elements

$$2^4 = 16$$

The answer is to subtract the four subsets that are in common with A and B. $16 - 4 = 12$.

93. **D**

I. $(4523)_6 = (1059)_{10}$

$$(4523)_6 = 4 \cdot 6^3 + 5 \cdot 6^2 + 2 \cdot 6^1 + 3 \cdot 6^0 = 1059$$

So, this is correct.

II. $(4523)_6 = (1069)_{10}$

$$(4523)_6 = 4 \cdot 6^3 + 5 \cdot 6^2 + 2 \cdot 6^1 + 3 \cdot 6^0 = 1059$$

So, this is incorrect.

III. $(0.203)_5 = (0.424)_{10}$

$$(0.203)_5 = 2 \cdot \frac{1}{5} + 0 \cdot \frac{1}{25} + 3 \cdot \frac{1}{125} = 0.424$$

That will be $(0.424)_{10}$

So, this is correct.

IV. $(0.203)_5 = (0.406)_{10}$

$$(0.203)_5 = 2 \cdot \frac{1}{5} + 0 \cdot \frac{1}{25} + 3 \cdot \frac{1}{125} = 0.424$$

So, this is incorrect.

94. **A**

Here, we have to find the area of the quadrilateral EQFS.

Lets draw a line from S to Q.

From the image we can say that the area of SFQE = area of $\triangle SFQ$ + area of $\triangle SEQ$

$$\text{area of } \triangle SFQ = \frac{1}{2} \cdot b \cdot h$$

We know that SR and RQ are perpendicular (given in question). So, height of $\triangle SFQ$ is 11.

$$= \frac{1}{2} n \cdot 11 = \frac{11n}{2}$$

$$\text{area of } \triangle SEQ = \frac{1}{2} \cdot b \cdot h$$

We know that SP and PQ are perpendicular (given in question). So, height of $\triangle SEQ$ is 7.

$$= \frac{1}{2} n \cdot 7 = \frac{7n}{2}$$

$$\frac{11n}{2} + \frac{7n}{2} = 225 \Rightarrow 9n = 225 \Rightarrow n = 25$$

95. A

Formulae for the compound interest is $p \cdot \left(1 + \frac{r}{100}\right)^n$

Here $n=3$, $p=5500$. The amount he receives after three is equal to $5500 \cdot \left(1 + \frac{10}{100}\right)^3$

It is given that he receives an interest of 33.1% after three years. So, the total sum would be 133.1% of the initial investment.

$$5500 \cdot \left(1 + \frac{10}{100}\right)^3 = 5500 \cdot \frac{133.1}{100}$$

$$\left(1 + \frac{r}{100}\right)^3 = 1.331$$

$$\left(1 + \frac{r}{100}\right)^3 = (1.1)^3$$

From this, $r=10$.

96. D

As per the question, x and y sum up to 20. Assume that there are 72 units of work. Kamla does three units of work a day, and Nirmala does four. We got another equation as well: $3x+4y=72$. Solving both gives us $x=8$, $y=12$.

Let's verify each option:

$$\frac{4x}{y} + 1 \text{ is even}$$

$$\frac{4x}{y} + 1 = \frac{4 \cdot 8}{12} + 1 = \frac{8}{3} + 1$$

$$2X + Y = 22 \Rightarrow 2 \cdot 8 + 12 = 28$$

$X - Y$ is an odd integer. $8 - 12 = -4$ it is even.

$$x^2 + 1 \text{ is a multiple of 13}$$

$$8^2 + 1 = 65 \text{ is a multiple of 13.}$$

So, only option D is correct.

SRCC GBO Cracku's WhatsApp Group

97. C

$\log_4 2$ is $1/2$. So the denominator will be $x - 12$. In numerator if x goes below 10 or above 15 the value under root goes negative. x can't be 12 as the denominator goes to 0. So the interval is $[10, 12) \cup (12, 15]$

98. B

The formulae for the sum of first n terms in AP is $\frac{n}{2} \cdot (2 \cdot a + (n - 1) \cdot d)$.

$$\frac{12504}{25} = \frac{24}{2} \cdot (2 \cdot a + 23 \cdot d)$$

$$\frac{1042}{25} = (2 \cdot a + 23 \cdot d)$$

Lets generate other equation, given the sum of next 24 terms is $\frac{17112}{25}$.

$$\text{So the first 48 terms is } \frac{29616}{25} = \frac{48}{2} \cdot (2a + (47 \cdot d))$$

Solving both we get $a=429/25$ $d=8/25$

99. B

Find out the LCM of the ropes' length. The LCM of 450, 990, 1620 is 89100 cm. So, the side length can be any multiple of 891m, given that the area is less than 10,00,000. So, it has to be 891.

100. D

Given the ratio and two points on the line, we can find out the point that divides the line in that ratio using internal section formulae $\left(\frac{mx_1 + nx_2}{m+n}, \frac{my_1 + ny_2}{m+n} \right)$.

The divider of line MN(point A) is as follows.

$$\left(\frac{(3 \cdot 1 + 2 \cdot -1)}{3+2}, \frac{(3 \cdot 1 + 2 \cdot 3)}{3+2} \right)$$

$$A\left(\frac{1}{5}, \frac{9}{5}\right)$$

Similarly, for line ST (point B)

$$\left(\frac{(3 \cdot 2 + 2 \cdot 0)}{3+2}, \frac{(3 \cdot 7 + 2 \cdot -4)}{3+2} \right)$$

$$B\left(\frac{6}{5}, \frac{13}{5}\right)$$

Also, do the same for the other line; we get points A and B. Now, find the line equation using the formula $y=mx+c$.

$$m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\left(\frac{13}{5} - \frac{9}{5}\right)}{\left(\frac{6}{5} - \frac{1}{5}\right)} = \frac{4}{5}$$

The equation becomes $y = \frac{4}{5} \cdot x + c$

Substitute one of those two points to get c value. $\frac{13}{5} = \frac{4}{5} \cdot \frac{6}{5} + c \Rightarrow c = \frac{41}{25}$

The equation will be $y = \frac{4}{5} \cdot x + \frac{41}{25} \Rightarrow 20x - 25y + 41 = 0$

101. B

Rama and Jaya differ by a percentage of 10 and marks of 8. Jaya's share is 45%, and 55% is Rama's. Each percent corresponds to $4/5$ marks. From this, Rama's mark is 44, and that of Jaya is 36.

TAKE FREE SRCC GBO MOCK TEST

WITH DETAILED SOLUTIONS AND ANALYSIS

102. C

The coefficient of the x term in a quadratic equation represents the sum of roots, while the constant term indicates the products of roots. Directly for the $P(x)$ α, β are the roots. In $q(x)$, the x coefficient can be written as $\alpha + 1 + \beta + 1$. By this, we say $\alpha + 1, \beta + 1$ are the roots of $q(x)$.

Now, check with the options where the root of $p(x)$ is one less than $q(x)$. It is option C.

103. A

The distance between the two opposite sides is 18 which is just the length of shorter diagonal. That is $\sqrt{3}a$. Hence a is $6\sqrt{3}$.

104. C

The growth percentage in 11 years is $(224500 - 150000)/150000$. That is 49.6666. Divide it by 11 to get an average percentage. That is 4.52

105. A

This is an AP with a common difference of 0.5. Use the formulae of $n^{\text{th}} \text{ term} = a + (n - 1) \cdot d$.

$$-0.25 + (n - 1) \cdot 0.5 = 17.25$$

n will be 36.

106. B

Split the given numbers as follows.

$$321 - 107 \cdot 3$$

$$48 - 2^4 \cdot 3$$

$$66 - 11 \cdot 2 \cdot 3$$

To have a perfect square, we need to have even powers to the prime numbers. That is $2^4 \cdot 107^2 \cdot 11^2 \cdot 3^2$. That will be $16 \times 1089 \times 11449$.

107. D

There are four different equations possible from this given equation. They are

$$x + y = 2$$

$$x - y = 2$$

$$-x + y = 2$$

$$-x - y = 2$$

These lines form a rhombus having diagonal length 4. The area of rhombus is $\frac{1}{2} \cdot d_1 \cdot d_2$.

$$\frac{1}{2} \cdot 4 \cdot 4 = 8$$

108. C

Let's expand the given equation.

$$91 \left(1 + \frac{1}{x} + \frac{1}{y} + \frac{1}{xy} \right)$$

$$91 \left(1 + \frac{x+y}{xy} + \frac{1}{xy} \right)$$

$x+y$ is constant, 91 is constant.

To get the minimum value we have to minimize the xy term.

That happens when both are equal.

So $x=26, y=26$.

$$91 \left(\left(1 + \frac{1}{26} \right) \left(1 + \frac{1}{26} \right) \right)$$

On simplifying we get $\frac{5103}{52}$

 VIDEO SOLUTION

109. B

Here we need to determine to which quadrant each of the g_1, g_2, g_3, g_4 goes to. For that we need to find the range and domain of these functions. The domain of g_1 is same as that of f as the value is directly inserted in to the function. Since the value of $g_1(x)$ is 2 less than the $f(x)$ the range would be $(-1, 0)$. So g_1 goes to 3rd quadrant. Similarly for g_2 the domain should be negative of what f has as the input for f is

111. **B**

Check with each of the options,

$$7^{141} + 1 \text{ can be written as } (7^{47})^3 + 1^3$$

$$a^3 + b^3 = (a + b)(a^2 + b^2 - ab)$$

$$\text{So, } 7^{141} + 1 \text{ is } (7^{47} + 1)(7^{94} + 1 - 7^{47})$$

Hence, option B is the correct answer.

112. **A**

Assume that there are x horses and y sheep. They both add up to 100%. If 50% of horses were sheep, there would have been 50% more sheep than the number of horses. So, considering horses count as $h/2$ and sheep count as $h/2 + s$, we can frame the equation $(h/2 + h/4) = s + h/2$. Solving this, we get $s = (h/4)$. Since both add to 100%, we get horses as 80%.

 VIDEO SOLUTION

113. **B**

Factorize $1080 = 2^3 \cdot 3^3 \cdot 5$. Here, HCF has to be between 3 and 12; the only possible number would be 6. The remaining thing that exists is only 5. So there are two ways: one, 5, belong to x , and two, five, belong to y .

114. **C**

Given a chord of length r , and the lines joining the centre and the ends of the chord are also radii, these lines form an equilateral triangle.

The area of the minor part will be the area of sector OAB minus the $\triangle$ le OAB will be the required answer.

$$\text{The area of sector} = \frac{\theta}{360^\circ} \cdot \pi r^2$$

Where $\theta = 60^\circ$

$$\text{Area of sector} = \frac{60^\circ}{360^\circ} \cdot \pi \cdot 42^2 = \frac{\pi}{6} \cdot 42^2$$

$$\text{Area of triangle OAB} = \frac{1}{2} \cdot b \cdot h = \frac{1}{2} \cdot 42 \cdot \frac{42\sqrt{3}}{2} = 42^2 \cdot \frac{\sqrt{3}}{4}$$

$$\text{Area of shaded region} = \text{Area of sector OAB} - \text{area of } \triangle \text{ le OAB} = \frac{\pi}{6} \cdot 42^2 - 42^2 \cdot \frac{\sqrt{3}}{4} = 42^2 \left(\frac{\pi}{6} - \frac{\sqrt{3}}{4} \right)$$

115. **D**

The domain of the log is $(0, \infty)$. So the x could go from $(-1, \infty)$. In general, the value of a log goes negative when the argument of a log is between 0 and 1 when the base is 10. In this question, the argument stays in that range when x is between -1 and 0. Hence, the graph will pass through the third quadrant when x is in that range. And when the x is positive, the log value will be positive. Hence, the graph passes through the first quadrant.

116. **D**

In this, there are two kinds of separations. Men and women, Indian and Non-Indian. It is given that $2/3$ of all are Indians. From this, we deduce that $1/3$ are Non-Indians. Of these $1/3$ Non-Indians, $3/8$ are women. Now we can derive the Non-Indian man, it is $(1/3) \cdot (1 - (3/8)) = 5/24$. $5/24$ of all are Non-Indian men. It is given that $1/3$ of all are women, so $2/3$ are men. Of $2/3$ men, $5/24$ are Non-Indians, so Indian men are $11/24$. The probability of a picked man being Non-Indian is $(5/24)/(2/3)$. That is $5/16$.

117. **B**

The longest chord means diameter. The given lines make a right-angled triangle. The circumcircle will touch all three vertices of the triangle. Since there is a right angle at a vertex, the side opposite to that will be the diameter. The line is $4x + 3y = 24$. This line touches the x-axis at (0, 8) and the y-axis at (6, 0). The distance between the points is the diameter.

The distance between the two points is $\sqrt{8^2 + 6^2} = 10$

118. D

$$I) ab(a+b) + bc(b+c) + ca(c+a) \leq 6abc$$

$$\frac{ab(a+b)}{abc} + \frac{bc(b+c)}{abc} + \frac{ca(c+a)}{abc} \leq 6$$

$$\frac{(a+b)}{c} + \frac{(b+c)}{a} + \frac{(c+a)}{b} \leq 6$$

We shall rearrange the terms

$$\frac{a}{c} + \frac{c}{a} + \frac{b}{c} + \frac{c}{b} + \frac{a}{b} + \frac{b}{a} \leq 6$$

Here, we have six terms: three fractions and their reciprocals.

$$t + \frac{1}{t} \geq 2 \text{ this is always true.}$$

So three such equations add to ≥ 6

So, it is only sometimes valid.

$$II. \frac{a^2+b^2+c^2}{abc} \leq \frac{1}{a} + \frac{1}{b} + \frac{1}{c}$$

$$\frac{a^2+b^2+c^2}{abc} \leq \frac{a \cdot b + b \cdot c + c \cdot a}{abc}$$

$$a^2 + b^2 + c^2 \leq a \cdot b + b \cdot c + c \cdot a$$

Consider (a,b,c) as (1,2,3)

Substituting them in the above equation,

$$1^2 + 2^2 + 3^2 \leq 1 \cdot 2 + 2 \cdot 3 + 3 \cdot 1$$

$14 \leq 11$ is not true, so this is also not true.

Hence, option D is correct.

119. C

Let the speed of car A be A and car B be B. Given that the speed of A is 60kmph. Let us assume that they both meet at Y after a time of t. A travels a distance of 400 in 6hr 40m. This distance is covered by B in t time.

$$400 = B \cdot t. \rightarrow 1$$

Again, the distance travelled by A in t time will be covered by B in 3hr 45m, which can be written as $A \cdot t = B \cdot \frac{15}{4} \rightarrow 2$

Substitute $B = 400/t$ from eq 1. We know that A is 60.

$$60 \cdot t = \left(\frac{400}{t}\right) \cdot \frac{15}{4}$$

$$t^2 = 25$$

$$t=5$$

120. **D**

The question is asked for atleast two, but the answer is provided for three.

First, arrange two out of four girls in the last two positions in 4×3 ways. Now consider three boys as a unit and two unarranged girls as two units. Arranging these three units can be done in $3!$ ways. Again, those three boys can be arranged in $3!$ ways.

So, the answer is 432.

Reasoning and Logical Ability

121. **A**

From statement 1, we know that there is at least some overlap between sheds and caves. From statement 2, we know that all sheds are nests, so the overlap between sheds and caves must also be within the category of nests. Statement 4 confirms that there is an overlap between sheds and dens, but since all sheds are nests, this also implies an overlap between nests and dens.

Conclusion I: Some caves are nests. This conclusion logically follows from the given statements. Since some sheds are caves and all sheds are nests, it's logical to conclude that some caves are nests. So, Conclusion I is true.

Conclusion II: No shed is stable. This conclusion does not logically follow from the given statements. Statement 3 states that only a few nests are stables, but it doesn't exclude the possibility that some sheds might also be stables. Therefore, we cannot conclude that no shed is stable based on the given statements. So, Conclusion II is false.

Therefore, Conclusion I logically follows from the given statements, but Conclusion II does not.

The correct option is A

122. **A**

Here, "SUN RISES IN THE EAST" can be decoded using the rule mentioned below:

First Reverse the order of the word. "SUN RISES IN THE EAST" $\Rightarrow$ "EAST THE IN RISES SUN"

Now count the number of letters exist in each of the word, and add plus 2 in that.

Hence, The number corresponds to EAST is $(4+2) = 6$, and the number of Corresponds to 'THE' is $(3+2) = 5$, and so on.

Now, in every word take the last letter of it. Hence 'EAST' can be represented as 6T, and 'THE' can be represented as 5E, and so on.

By this logic, "SUN RISES IN THE EAST" can be decoded as 6T 5E 4N 7S 5N

By the same logic, 'RAM GOES TO SCHOOL' can be written as 'SCHOOL TO GOES RAM' $\Rightarrow (6+2)L (2+2)O (4+2)S (3+2)M \Rightarrow 8L 4O 6S 5M$

The correct option is A

123. **A**

The number of unmarried literate people are highlited in the below image.

The count is $2003 + 367 = 2370$

So, statement 1 is not true.

The number of not literate working persons are highlighted in the below picture.

The count is $154 + 1003 + 356 = 1513$.

So, statement 2 is correct.

124. **D**

Each term's first letter changes at a difference of 2, 4, and 6.

The second letter is changing at a difference of 1, 2, and 3.

The third letter is changing at a difference of 2, 4, and 5. But it has to be 2, 4, 6.

So, the last term is not in the correct order.

125. **D**

2789**2**653429**2**897242592976479273

The bold 2's are the only 2's in the series that are preceded by 9 and followed by an even number.

126. **B**

There are 12 divisions in a clock constituting 360 degree angle, which means that the movement by the hand of the clock in going from one division to the next is $\frac{360^\circ}{12} = 30^\circ$

Our clock hand is going from 9 to 7; the hand would travel from 9 to 12, 3 divisions and then from 12 to 7, 7 more divisions; i.e., in total, the then would travel 10 divisions on the clock, which would make the distance travelled in degrees to be $30^\circ \times 10 = 300^\circ$

Therefore, Option B is the correct answer.

127. **A**

Option A:

N is father of T, T is sister of W, W is brother of X, X is daughter of M.

In this case N is husband of M.

Option B:

N is father of T, T is sister of W, W is daughter of X, X is daughter of M.

In this case M is mother in law of N.

Option C:

N is father of T, T is sister of W, W is brother of X, X is sister of M.

In this case N is father of M.

Option D:

N is son of T, T is sister of W, W is brother of X, X is daughter of M.

In this case N is grand son of M.

So, only option A is correct.

TAKE FREE SRCC GBO MOCK TEST
WITH DETAILED SOLUTIONS AND ANALYSIS

128. **D**

We are given that the ranking system is from top to bottom, meaning the lower values are better.

We are given that Kunal (rank 17) is ahead of Pinki by 6 ranks, which would mean that Pinki's rank is 6 more than Kunal, $17 + 6 = 23$

we are then given that Pinki (rank 23) is ahead of Balwan by 7 ranks, which would mean that Blawan's rank is 7 more than Pinki, $23 + 7 = 30$

Therefore, Option D is the correct answer.

129. **C**

The general pattern being followed here is that the n th term is defined as $n^2 + 1$

$$T_1 = 1 + 1$$

$$T_2 = 2^2 + 1$$

$$T_3 = 3^2 + 1$$

$$T_4 = 4^2 + 1$$

$$T_5 = 5^2 + 1$$

Therefore, the question mark would be best replaced by $4^2 + 1 = 17$

Hence, Option C is the correct answer.

130. **B**

25643**5**29**5**653 1649**5**62421**5**549672 147**5**5496425

The 5's that are preceded by odd number and not succeeded by odd number are highlighted in bold. There are 5 such 5's.

131. **D**

Looking at the relationship between the first two terms, we see that F is the sixth alphabet from the beginning, whereas U is the sixth alphabet from the end.

Similarly, K is the 11th alphabet from the start, and P is the 11 alphabet from the end.

Looking at the two terms in between, H is the 8th alphabet from the start, and S is the 8th alphabet from the end.

Finally, J is the 10th alphabet from the start, and Q is the 10th alphabet from the end.

And the terms in the centre are switched with each other.

In order to find the same pattern for the third term, we would begin with the first alphabet from the end: Z

The term would end with the 12th alphabet from the end (since L is the twelfth alphabet from the start), which would be O)

The second character in the term would be opposite of the third character in the third term which would be D, therefore, we want the fourth term from the end, which would be W.

Finally, for the third character, we would want the opposite of the second character of term three, which would be C. Therefore, we would want the third character from the end, which would be X

Therefore, the correct term would be ZWXO

Hence, Option D is the correct answer.

132. **A**

99 can be factorized as 9×11

120 can be factorized as $10 \times 12 = (9+1) \times (11+1)$

143 can be written as 13×11

So, $14 \times 12 = 168$

133. **A**

H O L Q Y & 4 Z 2 * 3 M & 7 S W # 8 2 p H * L is the given sequence.

After removing all the numbers from sequence, the resulting sequence will be H O L Q Y & Z * M & S W # p H * L

Seventh from the right will be S.

135. **D**

I. People engaged in tertiary sector from urban area is more than non-urban area.

$$103 + 67 > 76 + 84$$

$$170 > 160 \text{ True.}$$

So, statement 1 is true.

II. People engaged in primary sector from urban area is more than non-urban area.

$$103+106+93+83+96+84$$

$$302 > 263 \text{ true}$$

This statement is true.

136. **D**

The given sequence is PRG, VLJ, BFM.

PRG, VLJ, BFM

First letter pattern P, V, B

$$P+6 = V$$

$$V+6 = B$$

$$B+6 = H$$

Second letter pattern R, L, F

$$R-6 = L$$

$$L-6 = F$$

$$F-6 = Z$$

Third letter G, J, M

$$G+3 = J$$

$$J+3 = M$$

$$M+3 = P$$

So, the next term in the sequence is HZP.

137. **B**

JXG : ZNW

$$J+16 = Z$$

$$X+16 = N$$

$$G+16 = W$$

Similarly,

TRC

$$T+16 = J$$

$$R+16 = H$$

$$C+16 = S$$

JHS is the answer.

138. **D**

Number of odd days till 2000 is 0.

Number of odd days from 2001 to 2009 is 10 (2 leap years +6 normal years).

Number of odd days in 2010 till sept 10 is $(31+28+31+30+31+30+31+31+30 = 274)$ 274

Total odd days is $274+10=284\%7=4$.

So, the day is thursday.

139. **A**

Option A: GIHJ : FLGK

$F = G-1$

$L = I+3$

$G = H-1$

$K = J+1$

The pattern here is $(-1,+3,-1,+1)$

Option B: ZYAX : YZZY

$Y = Z-1$

$Z = Y+1$

$Z = A-1$

$Y = X+1$

The pattern here is $(-1,+1,-1,+1)$

Option C: EHFG : DIEH

$D = E-1$

$I = H+1$

$E = F-1$

$H = G+1$

The pattern here is $(-1,+1,-1,+1)$

Option D: PVQU : OWPV

$O = P-1$

$W = V+1$

$P = Q-1$

$V = U+1$

The pattern here is $(-1,+1,-1,+1)$

Option 1 is different from other options.

140. **B**

The pattern in this sequence is as follows:

if w,x,y,z is the sequence.

$x = w*2+3$

$y = x*2+4$

$z = y*2+5$

Let's look at the original sequence.

$$11 = 4 \cdot 2 + 3$$

$$26 = 11 \cdot 2 + 4$$

$$? = 26 * 2 + 5$$

$$120 = ? * 2 + 6$$

$$247 = 120 \cdot 2 + 7$$

$$\Rightarrow ? = 26 \times 2 + 5 = 57$$

141.A

India has its own culture, but due to introduction of multiple cultures India lost its own culture. So, two is the cause, one is the effect.

143. **B**

Option A)SHAR : UJCT

$$S+2 = U$$

$$H+2 = J$$

$$A+2 = C$$

$$R+2 = T$$

Option B)BEYO : DGBQ

$$B+2 = D$$

$$E+2 = G$$

$Y+2 = A$ (But it is B)

$$0+2 = Q$$

Option C)MIGH : OKIJ

$$M+2 = 0$$

$$I+2 = K$$

$$G+2 = 1$$

$$H+2 = J$$

Option D)PHOB : RJQD

$$P+2 = R$$

$$H+2 = J$$

$$0+2 = Q$$

$$B+2 = D$$

Option B is different from the others.

145. B

$$4 = 4 * 1$$

$$12=4*3$$

$$? = 4^*x$$

$$60 = 4 \cdot 15$$

$$124 = 4 \cdot 31$$

$$252 = 4 \cdot 63$$

Here, every number is a multiple of 4. The multiple in the second term is one more than the twice of the previous multiple.

$$3 = 1 \cdot 2 + 1$$

$$31 = 15 \times 2 + 1$$

$$63 = 31 \times 2 + 1$$

$$x = 3 \times 2 + 1$$

$$x = 7$$

147. **D**

The formed right-angled triangle is having base $18(10+8)$ and height $7(12-5)$.

The distance is $\sqrt{18^2 + 7^2} = \sqrt{373}$

148. **D**

80 can be written 8×10

99 can be written as 9×11

Option A) $25 : 122$

$25 = 1 \times 25, 5 \times 5$

The possible value is $2 \times 26 = 52, 6 \times 6 = 36$

This option is not satisfying the relation.

Option B) $79 : 90$

$79 = 1 \times 79$

The possible value is $2 \times 80 = 160$.

This option is not satisfying the relation.

Option C) $110 : 169$

$110 = 1 \times 110, 2 \times 55, 5 \times 22, 10 \times 11$

The possible values are $2 \times 111 = 222, 3 \times 56 = 168, 6 \times 23 = 138, 11 \times 12 = 132$.

This option is not satisfying the relation.

Option D) $120 : 143$

$120 = 1 \times 120, 2 \times 60, 3 \times 40, 4 \times 30, 5 \times 24, 6 \times 20, 8 \times 15, 10 \times 12$

The possible values are $2 \times 121 = 242, 3 \times 61 = 183, 4 \times 31 = 124, 6 \times 25 = 150, 9 \times 16 = 144, 11 \times 13 = 143$.

This option is satisfying the relation.

149. **D**

The pattern in this sequence is as follows:

Of the three letters the first is the third next letter in the alphabetical sequence of the first letter in the previous term.

The second letter is the second next letter in the alphabetical sequence of the second letter in the previous term.

Similarly the third letter is the 5th next letter in the alphabetical sequence of the third letter in the previous term.

Let's find the second term from the first term.

JWM: _ _ _

Third letter after J is M

Second letter after W is Y.

Fifth letter after M is R.

So, the second term is MYR.

In the same way, the next term of SCB is

Third letter after S is V

Second letter after C is E.

Fifth letter after B is G.

VEG is the correct answer.

150. **C**

We know that Urvi got less than Hina and Tina. We also know that Kiran got greater than or equal to Hina and Tina. So, Kiran marks are more than Urvi even if Kiran marks are equal to the Hina's marks.

So, Statement 1 is definitely true.

We know that Ira's marks are greater than or equal to Urvi's marks. So, we don't know by how much if Ira's marks are greater than to the Urvi's marks. We know that Tina marks are more than Urvi's. So, we cannot compare the marks of Tina with Urvi's marks.

So, statement 2 cannot be determined.

151. **B**

* 5 U £ ± 2 W @ 3 K 9 ÷ # 6 M & 4 A α 5 G δ 7 B % R Ø

In this sequence 3 K 9 ÷ # 6 M & 4 A α is the middle 9 terms.

If we reverse this we get α A 4 & M 6 # ÷ 9 K 3

* 5 U £ ± 2 W @ α A 4 & M 6 # ÷ 9 K 3 5 G δ 7 B % R Ø

The twenty-first element from the right end will be W. Then seventh to the right of that W will be 6.

152. **A**

08 : 62

Here the pattern is two subtracted from number square.

$$8^2 - 2 = 62$$

Similarly,

$$15^2 - 2 = 223.$$

153. **C**

Case 1:

Some peak is hill (Conclusion I)

In this case, we consider that some part of the peak overlaps with the hill. This is possible because some part of the hill is land (from statement 1), and only a few land is peak (from statement 3). So, there could be a scenario where the part of the hill that is land also happens to be part of the peak.

Case 2:

No hill is peak (Conclusion II)

In this case, we consider that there is no overlap between the hill and the peak. This is also possible because even though some part of the hill is land, and only a few land is peak (from statement 3), it doesn't necessarily mean that the part of the hill that is land has to be part of the peak.

So, in each case, one conclusion can be true without contradicting the given statements. Therefore, you're correct that Option C: Either conclusion I or II follows is the correct answer. This means that based on the given statements, either "Some peak is hill" or "No hill is peak" could be true, but we can't definitively conclude which one is correct.

155. **C**

Action-1)

Providing a minimum support price for onions would motivate farmers to cultivate onions despite the challenges they might face due to lower production. Farmers are incentivized to grow onions, which would stabilize the market to some extent by ensuring a steady supply.

Action-2)

Mandating them to grow onions is an extreme step. This undermines the autonomy of farmers to make decisions based on their individual circumstances.

Therefore, only 1 follows.

156. **B**

Government scholarships can incentivize and support girls to pursue higher education by easing financial constraints. Therefore, the reason could explain the trend of increasing enrolment in higher education for girls.

Therefore, both (A) and (R) are true and (R) is the correct explanation of (A).

157. **A**

Using the absolute information:

- 1) Tina is second to the left of Aavya
- 2) Christy is seated second to the left of Tina.
- 3) Tina is sitting between Veena and Yaana
- 4) Aavya is seated to the immediate right of Veena.

We can fill the 5 positions in the circle; now, using the Zora seated to the right of Umang, we can fill the remaining 2 spots to get the final configuration as follows:

Fourth to the right of Y is U, i.e. Umang.

158. **B**

Using the absolute information:

- 1) Tina is second to the left of Aavya
- 2) Christy is seated second to the left of Tina.
- 3) Tina is sitting between Veena and Yaana
- 4) Aavya is seated to the immediate right of Veena.

We can fill the 5 positions in the circle; now, using the Zora seated to the right of Umang, we can fill the remaining 2 spots to get the final configuration as follows:

Fourth to the left of Z is T, i.e. Tina

Explanation [159 - 160]:

Omi is in the office on the lowest floor.

=> Omi is on the floor 7

There is exactly one office between Gagan's office and Omi's office.

=> Gagan is on the floor 5

From conditions 2 & 4 => Punnet, Raksha, and Yella should be in this order, but Punnet can't be on floor 1 due to condition 4

=> Punnet, Raksha and Yella are on floors - 2,3, and 4, respectively.

Now, the remaining people are Mohit and Bhanu, and the remaining floors are 1 and 6.

=> From condition 4, Bhanu can't be on floor 1 => Bhanu is on floor 6, and Mohit is on floor 1.

159. **B**

From the given options, only Mohit is on an odd-numbered floor.

160. **A**

or 1.

Bhanu is on floor number 6.
